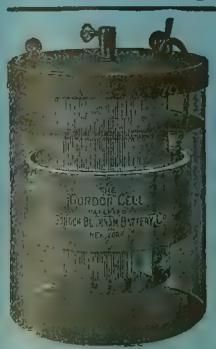
Holmes Fibre-Graphite Mfg. Co.,

Station Z, Philadelphia.



GORDON PRIMARY CELL.

For Open and Closed Circuit Work.

The Perfect, Modern, Longest Lived and Most Economical Cell Ever Put on the Market.

In use by the leading cities, railroads, telephone and gas engine companies.

WE CLAIM:—Constant discharge of current without polarization; no local action; no noxious gases or fumes; no acids; least labor for operation; cleanest; not freezing at 28° below zero; economic value 50 per cent. greater than gravity cell, and 30 per cent. greater than best other cell in market. For No. 1 cell, 250 ampere hours; for No. 2 cell, 100 ampere hours; on open circuit, .9 to 1 volt; on closed circuit, .65 to $\frac{7}{10}$ volt. Send for circular and price list.

Power Generators.

VICTORY

FOR

THE TRIUMPH

OVER THE WESTINGHOUSE.

The Westinghouse Electric & Mfg. Co., apparently inspired by a feeling of animosity against this Company, owing to the continued and growing popularity of our HIGH-CLASS APPARATUS, brought suit against it for infringement of patent.

U. S. Judge Clark, of the Southern District of Ohio, not only rendered a decision in our favor, but declared the patent on which the Westinghouse Co. based its claim as void.

Congratulations, accompanied by orders for our HIGH-CLASS APPARATUS, are being received daily, and, so accompanied, are doubly acceptable.

THE TRIUMPH ELECTRIC CO., Cincinnati, Ohio.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

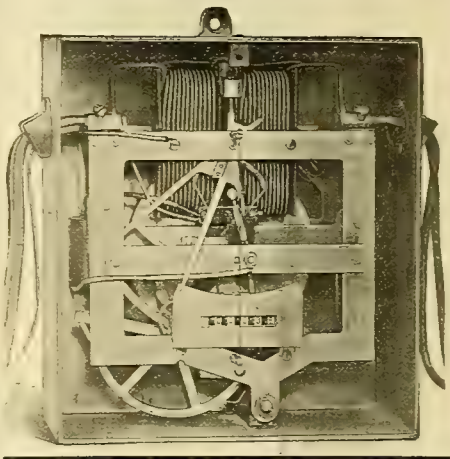
THE AMERICAN ELECTRIC METER CO.

9th St. and Montgomery Ave., Philadelphia, Pa.,



Is now prepared to take orders for immediate delivery of all sizes of 3-Wire Constant Potential Registering Meters.

This meter is calibrated ready for instant use.
This meter requires no knowledge of electricity to erect.
This meter shows the load passing every instant.
This meter is hermetically sealed.
This meter measures correctly with uneven loads.
This meter is magnetically shielded and has no permanent magnetism.
This meter can be calibrated with a watch in six minutes.
This meter requires no lubrication.
This meter is direct reading, having no multiplier or dials.
This meter will operate for years without opening.
This meter has no springs, jewels, frictional errors or lag.
This meter once right is always right.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume 8vo. cloth, gilt **$3.50.**
The most important work on the subject A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings.—Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth. **$1 25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

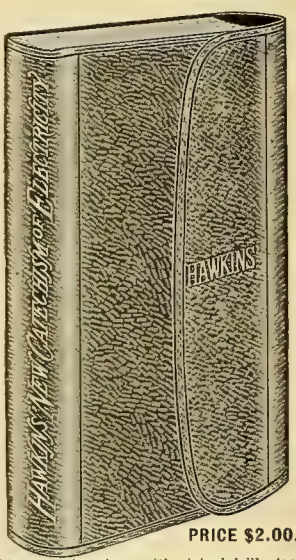
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

Stover Bicycle Manufacturing Co.

IT COSTS SO LITTLE AND WORKS SO WELL

FREEPORT, ILL., March 2nd, 1897.

The Boiler Expurgator Co., Chicago, Ill.

Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time. Very truly yours,

STOVER BICYCLE MFG. CO.
W. A. Hance, Supt.

The Most Reliable General Telephone Apparatus Manufacturers in the World.

THE VICTOR TELEPHONE APPARATUS

STANDS FOR

The highest efficiency; and excellence in workmanship, material and finish. We guarantee our devices to be non-infringing and we will protect you against any valid claims of any person or corporation whatsoever.

The Victor Straight Metallic Express Switchboard contains many points of merit long sought for by the independent field. It is the result of fifteen years' experience, coupled with up-to-date developments of switchboard parts. It is the ideal straight metallic circuit; equally adapted for common return or ground, without change. It combines fewness, simplicity and stability of parts, compactness, ease and rapidity of operation, durability and economy of maintenance under the most severe service. This board has no useless trappings or superficial parts. It is built up in five jack and drop sections, invisibly wired, each complete within itself and all accessible without disturbing the surrounding parts.

We manufacture all types and styles of telephones, our standard instruments are equipped with Victor special double pole receiver, long-distance arm transmitter with metal box base, containing 500 ohm induction coil, also our powerful generator and ringer. These appliances taken together give clear and highly efficient service.

We manufacture everything in central station apparatus, telephones and parts, switchboards any capacity, cable heads, cross connection boards, fuse heads, carbon lightning arresters, telephones for long-distance and exchange work, factory and private lines, desk 'phones, double and single pole receivers, arm transmitters, generators, extension bells, etc.

All our products are of the highest quality, our prices are most reasonable and our apparatus contains the finest workmanship, material, and finish. You are wanting from time to time parts, appliances, telephone and central station equipment. Let us know your needs and we will be pleased to submit you full information and make you prices.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers Mercadier's Bi-Telephone
12. The Siemens Kotyra Neumayer and Sattler Receivers
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

Published and for sale by ELECTRICIAN PUBLISHING CO., 510 Marquette Building, Chicago.

THIS TRADE MARK

STANDS FOR THE

Best Transmitter

FOR ALL PURPOSES

EVER PRODUCED.

Among other of the BEST THINGS manufactured or controlled by us—and the fact of our name connected therewith is a guarantee of their excellence—are the

New Standard Dry Batteries.

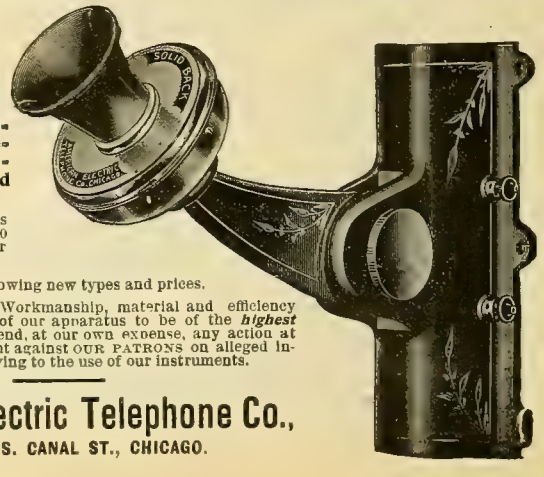
Mason Telephone Pay Stations.

Toll-Line Arrester and Cut-Out Switch.

STANDARD TELEPHONE & ELECTRIC CO.,

MADISON, WIS.

NO. 30 AMERICAN TRANSMITTER.



This instrument, for volume of voice transmission, distinctness of articulation, exact reproduction of articulate sounds and durable qualities is unequaled.

The Largest Manufacturers of Telephones and Switchboards in the United States.

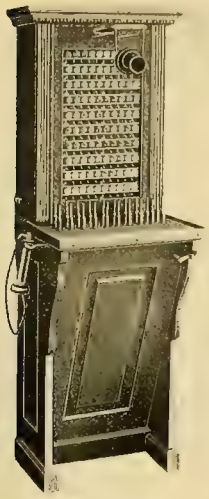
Five hundred exchanges aggregating over 100,000 telephones in use. Four years' service.

Write for catalogue showing new types and prices.

WE GUARANTEE Workmanship, material and efficiency of our apparatus to be of the ***highest grade,*** and agree to defend, at our own expense, any action at law which may be brought against OUR PATRONS on alleged infringement of patents owing to the use of our instruments.

American Electric Telephone Co.,

171-173 S. CANAL ST., CHICAGO.



The

H. M. Fisk Mfg. Co.,

Wheaton, Ill.

Manufacturers of

Telephones, Switchboards and Telephone Supplies.

Exchanges constructed under very favorable terms.

Our equipment is simplicity itself.

Note our Switchboard—no keys are used in its operation.

Telephones are a model of completeness.

Write for particulars and circular.

"ST. PAUL" TELEPHONES

For Exchanges, Private Line and Toll Line Service. Automatic Warehouse Systems, Express Switchboards. All instruments fully guaranteed. **Northwest Engineering Company, St. Paul, Minn.**

THE ALLEN-HUSSY CO., 211 and 213 Randolph St, CHICAGO.

MANUFACTURERS OF INTERIOR TELEPHONES INTERCOMMUNICATING SYSTEMS.

JUST OUT—Our New Catalogue. Don't delay in sending for a copy.

THE ORATOR.

The ORATOR AND Improved Hunnings

solid back dust transmitters in Wall, Desk and Cabinet Styles. They are **Convenient, Durable** and the **best** of **talkers.**

A trial will convince anyone of their superiority on either short or long distance work.

Anyone can make an instrument that will work well at first, but to produce one that will **continue** to meet every proper demand is quite another problem.

The **ORATOR** will.

MANUFACTURED BY

The RAWSON ELECTRIC CO.,

ELYRIA, O., U. S. A.

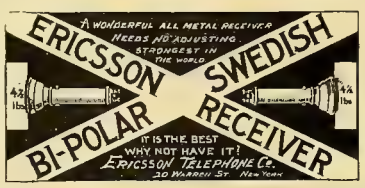
THIS 'PHONE $5.00.

Others from $3.00 to $15.00.

For further information, write to

STONE CITY TELEPHONE MFG. & CONST. CO.,

JOLIET, ILL.



IMPORTANT NOTICE.

We desire to call the attention of telephone users to the fact that the Western Telephone Construction Company's new Western Express Bridging Bell Telephone is the only high efficiency, non-infringing Bridging Telephone on the open market.

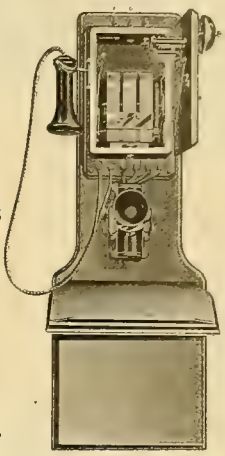
SOMETHING NEW IN TELEPHONES.

Western "Express" LONG DISTANCE TELEPHONE.

NOTICE.

Western Express No. 1 is a Series Telephone.

Western Express No. 2 is a Bridging Telephone.



Cut shows Western Express No. 2 Telephone.

Special Features.

Quadripolar Ringer Magnets; our celebrated Western No. 7 Adjustable Arm Transmitter; new type of generator; the most efficient armature and shunt ever used; wide cut gears; platinum contact hook switch; special long distance type induction coil; high grade batteries; new style adjustable bi-polar receiver, devoid of exposed metal parts; cabinet work of finest finish; can be changed from series to bridged, or from bridged to series type in a few minutes.

Send for Poster "A" for detailed description.

THE H. C. D. COMBINED CARBON AND FUSE LIGHTNING ARRESTER.

The most efficient arrester on the market. Will perfectly protect your telephones and switchboards. Built upon lines practically and theoretically correct. A trial means its adoption. **Use this arrester and save money.**

Western Telephone Construction Co., 250-254 S. Clinton St., **CHICAGO.**

BUILT ON HONOR AND FOUNDED ON MERIT!

DON'T YOU THINK IT WOULD PAY YOU TO BUY AN ABSOLUTELY PERFECT MAGNETO BELL? IF SO, BUY OURS!

THE WILLIAMS ELECTRIC CO., 84 & 86 Seneca St., Cleveland, O.

Farr Telephones

Are so simple that even children can use them.

It will pay you

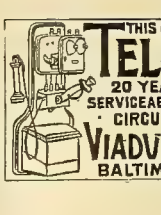
To get our new catalogue and hand-book of information.

It Contains

Hints to telephone men; how to build telephone lines; diagrams and directions for connecting telephones; how to overcome telephone troubles; diagrams for connecting intercommunicating systems; weight and resistance of line wires; estimates for building exchanges; induction of various wires; about telephone patents Other valuable pointers. Illustrations of different methods of connecting lines. Over 200 illustrations of everything needed in telephone work. This valuable catalogue **sent free** on request. We make everything you need.

FARR Telephone and Construction Supply Co.

357 Dearborn St., CHICAGO.



THIS ☺ HAS BEEN MAKING

TELEPHONES

20 YEARS, NOT CHEAP BUT SERVICEABLE AND FULLY GUARANTEED.

CIRCULARS FURNISHED.

VIADUCT ELECTRIC Co.

BALTIMORE, MD., U. S. A.

GOVERNORS.
ETC.

THE PELTON WATER WHEEL CO.

Gives exclusive attention to the development and utilization of water powers by the most modern, economic and improved methods.

An experience of more than fifteen years, involving both the theory and practice of hydraulic engineering as relates to power development in its widest range of application, is at the service of its customers

NINE THOUSAND WHEELS NOW RUNNING
Aggregating some 700,000 h. p.

ELECTRIC POWER TRANSMISSION

Pelton Wheels afford the most reliable and efficient power for such service, and are running the majority of stations of this character in the United States, as well as most foreign countries.

Highest efficiency and absolute regulation guaranteed under the most extreme variations of load. Catalogues furnished on application.

Address, PELTON WATER WHEEL COMPANY,
143 Liberty St., New York City, U. S. A. or 121 Main St., San Francisco, Cal., U. S. A.

WATER WHEELS

For all Heads from 3 Ft. to 2000 Ft.
Especially adapted to all kinds of
ELECTRIC POWER AND LIGHTING PLANTS.

Recent tests at Holyoke enable us to guarantee:
The Largest Power ever obtained from a wheel of the same diameter. The highest speed ever obtained for the same power. The highest mean efficiency ever realized when running from half to full gate. We guarantee also: *A runner of the greatest possible strength. A gate unequaled in quickness and ease of opening and closing. Tests show over 81 per cent. average efficiency with half to full water.*

State your Head and send for 124 page pamphlet.
JAMES LEFFEL & CO., Springfield, Ohio, U. S. A.

GRAPHITE FOR RESISTANCE...

Made in almost any form required and of 1 ohm or 1,000,000 ohms as desired. We also make graphite boxes and crucibles resisting heats of 4,000 degrees.

JOS. DIXON CRUCIBLE CO., - - Jersey City, N. J.

Iron Roofing.

The waste of products by the elements is simply tremendous. Our product for erecting temporary or permanent shelter or protection is cheap enough to enable anyone to use it in preference to other materials. Especially adapted for all structures. Write for special circular.

The Cincinnati Corrugating Co.
Box 533, PIQUA, OHIO.

Superiority Under all Conditions

Has won the favor and approbation of all riders who have purchased

Columbia Bevel-Gear Chainless Bicycles, $125.

It is generally admitted by them that the Columbia Bevel-Gear Chainless is over a mile faster in the hour on ordinary roads than chain wheels, and that it has 10% advantage in hill climbing.

Rides Easily, Smoothly and Silently.

MUNICIPAL OWNERSHIP:

ITS FALLACY.

With legal and editorial opinions, tables and cost of lights as furnished by private companies and municipal plants.

BY M. J. FRANCISCO.

Fourth edition, revised. 100 pages. PRICE 50c. Full of valuable information for everyone interested in the subject.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BUILDING, CHICAGO.

ELECTRICITY AND MAGNETISM.

A series of thirty-four lessons covering the Science of Electricity from its Fundamental Principles to its Everyday Practical Application. Comprises 325 pages, over 300 diagrams and illustrations. Price $2. By

PROF. D. C. JACKSON, University of Wisconsin.
PROF. H. S. CARHART, University of Michigan.
PROF. B. F. THOMAS, University of Ohio.
PROF. WM. A. ANTHONY, of New York.
PROF. BROWN AYRES, Tulane University.
PROF. A. C. PERRINE, Leland Stanford University, Cal.
PROF. GEO. D. SHEPARDSON, University of Minn.,

A Comprehensive Treatise in Simple Language, free from Algebraic Equations and Easily Understood. And others.

TABLE OF CONTENTS:

1. The nature and properties of electricity.
2. Machines for generating electricity by friction and by electric induction.
3. Electric batteries or appliances for generating electricity by chemical action.
4. Electric batteries or appliances for generating electricity by chemical action (concluded).
5. The magnetic effects of electric currents, magnetic fields.
6. The magnetic effects of electric currents, and magnetic circuits.
7. Ohm's law of the flow of electricity.
8. Heating effects of electric currents. Miscellaneous effects of electric currents.
9. Galvanometers and voltameters.
10. Measurement of electrical resistance.
11. Everyday measurements of electric currents and pressures.
12. Everyday measurements of electric power. Condensers and the measurement of their capacity.
13. Electrolytic deposition of metals.
14. The electric telegraph.
15. Multiple telegraphy.
16. The telephone.
17. The construction of telegraph and telephone lines and instruments.
18. Testing lines for insulation and conductivity and the location of leaks and breaks.
19. Principles of continuous current dynamos and motors.
20. Principles of continuous current dynamos and motors, their construction, care and attendance.
21. Arc lighting and arc light machinery.
22. Incandescent lighting and power transmission, two, three and five wire systems of distribution for electric lights and motors.
23. Construction of electric light and power circuits and their testing.
24. Testing electric light circuits, and the distribution and measurement of light.
25. Electromagnetic induction.
26. Alternating currents.
27. Alternating currents and alternating current machinery (concluded).
28. Miscellaneous applications of electric motors.
29. Electric railways.
30. Methods of handling and controlling railway motors and generators.
31. Model electric plants.
32. Underwriters' rules, etc.
33. Electric welding, forging, etc.; electricity applied to the kitchen.
34. Electro-therapeutics.

SENT POSTAGE PREPAID TO ANY ADDRESS IN THE WORLD ON RECEIPT OF PRICE, $2.00.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a **New Book**, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding. 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-book. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors, How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams.
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicators and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents, 8vo, cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring an i for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo, cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

Hospitalier, E.—Domestic Electricity for Amateurs. Translated from the French. With additions by C. J. Wharton. With illustrations.....$2.50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations.....$5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition.....$3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated.$0.50
[Vol. 96 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather.....$1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations.....$2.50

Lockwood, T. D.—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition.....$1.50

Lockwood, T. D.—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1.00

Meadowcroft, W. H.—The A. B. C. of Electricity. 36 Illustrations.....$0.50

Martin, T. C.—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition.....$4.00

Martin, T. C. and Wetzler, J.—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations.....$3.00

Maver, and Davis, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

McClure, J. B.—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasimeter, Electric Light and all his Principal Discoveries, etc..$1.00

Niaudet, Alfred.—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated.....$2.50

Noll, Augustus.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

Pope, Franklin Leonard.—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged.....$1.50

Prindle, H. B.—A Popular Treatise on the Electric Railway of to-day. Fully illustrated.....$0.25

Russell, Stuart A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

Salomons, Sir David.—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand-book. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893.....$1.50

Sloane, T. O'Conner.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated.....$1.00

Sloane, T. O'Connor.—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations.$3.00

Sloane, T. O'Connor.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys.....$1.00

Sloane, T. O'Connor.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

Tesla, Nikola.—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author. Illustrated.....$1.00

Tesla, Nikola.—Lectures on the Electro-Magnet. Illustrated,.....$1.00

Thurston, Prof. R. H.—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates.....$1.50

Thomson, Prof. Elihu.—What is Electricity? Illustrated.$0.25

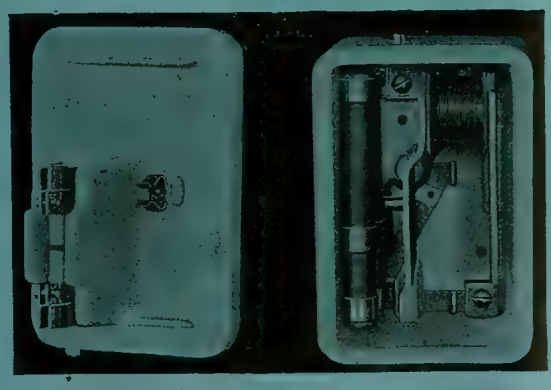
Always ready; never fails to protect; requires no attention.



M D Railway Lightning Arrester.

POWER STATION DAMAGED.

Lightning Burned Out a Generator.

Lightning played havoc in the power plant of the ———— Electric Railway Company, at ————, during the thunderstorm Thursday evening, damaging a generator to the extent of $400 or $500. The lightning came over the wire twice, but was grounded by the lightning arrester without damage. The third time the **lightning passed through to the generator, burning out several coils and setting the machine on fire.** But for **the prompt action of the men in charge of the machinery, great damage might have resulted.**

The stopping of the disabled machinery **not only brought the whole electric road to a standstill,** but extinguished every light in the power house.

REGISTERED SEPTEMBER 11, 1894.

CHLORIDE ACCUMULATORS

IN THE STATION OF CLAREMONT, N. H., ELECTRIC LIGHT COMPANY.

OPERATED BY WATER POWER WITH AUXILIARY STEAM PLANT.

THE ELECTRIC STORAGE BATTERY CO., Boston, Mass.

CLAREMONT ELECTRIC LIGHT COMPANY, CLAREMONT, N. H., June 29, 1898.

GENTLEMEN:—In regard to the storage battery installed by you at our power house, I am pleased to make the following statement:

I have practically had charge of the plant since its installation two years ago. The plates are now in good condition, and no renewals whatever have been made.

In the month of January, 1896, before the batteries were installed, it was found necessary to run the auxiliary engine some 150 hours to supplement the water wheel. During January, 1898, after the batteries were installed, the same conditions as regards water power prevailed, and the station load was 33 per cent heavier, yet it was necessary to run the auxiliary engine only 13 hours during the month.

We have also abandoned entirely the use of the water wheel governor since the batteries were put in, these serving to maintain satisfactory regulation, the hand gate being used to take care of the large and gradual changes of head and load.

During the winter we frequently discharge the battery at the rate of 75 amperes for two hours or more to carry the peak of the lighting load, its nominal rating being 50 amperes. It also carries the load during the day and after midnight without any attendance whatever. [Signed] W. A. HESSELTINE, Supt.

REWIRED WITH RAVEN WHITE CORE WIRE

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY,

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago. Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly,
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

GRIMSHAW WHITE CORE. Used exclusively for all Incandescent Lighting at World's Columbian Exposition.

RAVEN WHITE CORE. Used in some of the largest buildings in the United States.

Main Office and Factory:
ELIZABETHPORT, N. J.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

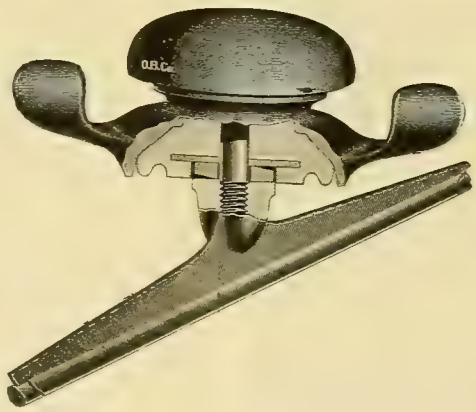
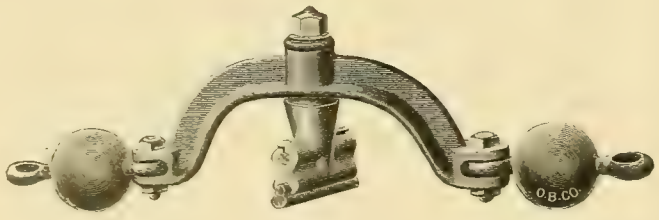
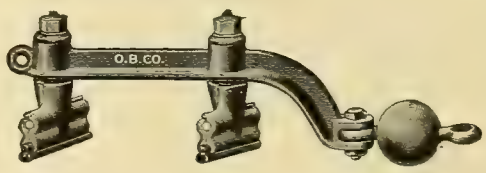
----FOR----

Electric Railway Supplies.



Write Us for Our New No. 16-A Railway Catalogue, Just Out. It is Devoted Exclusively to Electric Railway Supplies and is Strictly Up to Date.



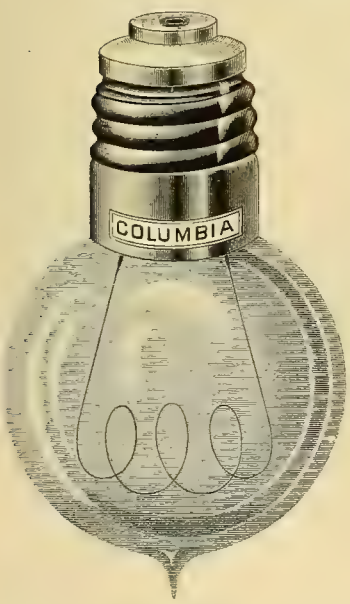


COLUMBIA LAMPS!

UNEQUALED IN QUALITY.

WE PRESENT herewith cut of the Columbia Railway Lamp, made for series burning on electric street railway circuits, and guarantee our Railway Lamps to be absolutely uniform in current consumption, thereby insuring an even distribution of light throughout the car, all lamps burning at same incandescence. This type of lamp is used exclusively by some of the largest street railway systems in this country, and we have yet to receive the first complaint from their service.

A trial order is respectfully solicited, enabling us to demonstrate in actual service the superior qualities of the Columbia Lamp.



The smaller cut represents our special headlight lamp made to burn in series with the other lamps in the car. It will also be found well adapted to decorative lighting in cars for trolley parties.

Lamps in stock at branch offices.

The Columbia Incandescent Lamp Company,

MAIN OFFICE AND FACTORY:

1910, 1912, 1914 OLIVE STREET, ST. LOUIS, MO.

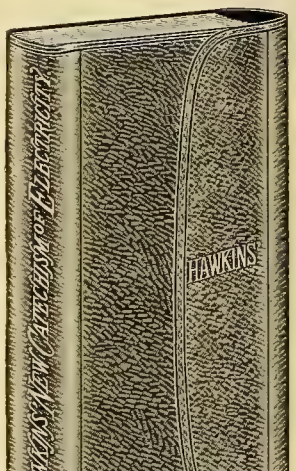
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

THE OMAHA EXPOSITION.

When the World's Fair at Chicago ceased to exist, it was supposed that we should ne'er look upon its like again. However, the Trans-Mississippi Exposition at Omaha has effectively reproduced in similarity all of the buildings which made the White City so attractive in 1893.

It does not now take two weeks to wander through grounds and structures and then be compelled to go away with a jumble of ideas, for the Omaha Exposition people have profited by past experience, and have so improved the arrangement of exhibits that no more than two or three days of time need be consumed in admiration and inspection of the marvelous resources of the West, collected together in the chief city of Nebraska.

Even the new Midway is a reproduction of the far-famed Street of All Nations of 1893, with many improvements upon the original.

The electric lighting of the buildings, grounds and lagoons at night makes a scene of enchanting beauty, alone worth traveling a thousand miles to see.

The means of communication between the city and grounds are ample, and the distance to be traversed is short.

The ways of reaching Omaha are innumerable, but chief among them is the direct Chicago and Omaha short line of the Chicago, Milwaukee & St. Paul Railway, with its electric lighted, vestibuled trains, leaving Chicago every night at 6:15 p. m., and arriving Omaha at 8:20 the next morning. Dining car service en route.

Excursion tickets are on sale at every coupon ticket office in the United States over the Chicago, Milwaukee & St. Paul Railway through Northern Illinois and Central Iowa, as well as at 95 Adams street, and at the Union Passenger Station, Canal and Adams streets, Chicago.

The Most Reliable General Telephone Apparatus Manufacturers in the World.

THE VICTOR TELEPHONE APPARATUS

STANDS FOR

The highest efficiency; and excellence in workmanship, material and finish. We guarantee our devices to be non-infringing and we will protect you against any valid claims of any person or corporation whatsoever.

The Victor Straight Metallic Express Switchboard contains many points of merit long sought for by the independent field. It is the result of fifteen years' experience, coupled with up-to-date developments of switchboard parts. It is the ideal straight metallic circuit; equally adapted for common return or ground, without change. It combines fewness, simplicity and stability of parts, compactness, ease and rapidity of operation, durability and economy of maintenance under the most severe service. This board has no useless trappings or superficial parts. It is built up in five jack and drop sections, invisibly wired, each complete within itself and all accessible without disturbing the surrounding parts.

We manufacture all types and styles of telephones, our standard instruments are equipped with Victor special double pole receiver, long-distance arm transmitter with metal box base, containing 500 ohm induction coil, also our powerful generator and ringer. These appliances taken together give clear and highly efficient service.

We manufacture everything in central station apparatus, telephones and parts, switchboards any capacity, cable heads, cross connection boards, fuse heads, carbon lightning arresters, telephones for long-distance and exchange work, factory and private lines, desk 'phones, double and single pole receivers, arm transmitters, generators, extension bells, etc.

All our products are of the highest quality, our prices are most reasonable and our apparatus contains the finest workmanship, material, and finish. You are wanting from time to time parts, appliances, telephone and central station equipment. Let us know your needs and we will be pleased to submit you full information and make you prices.

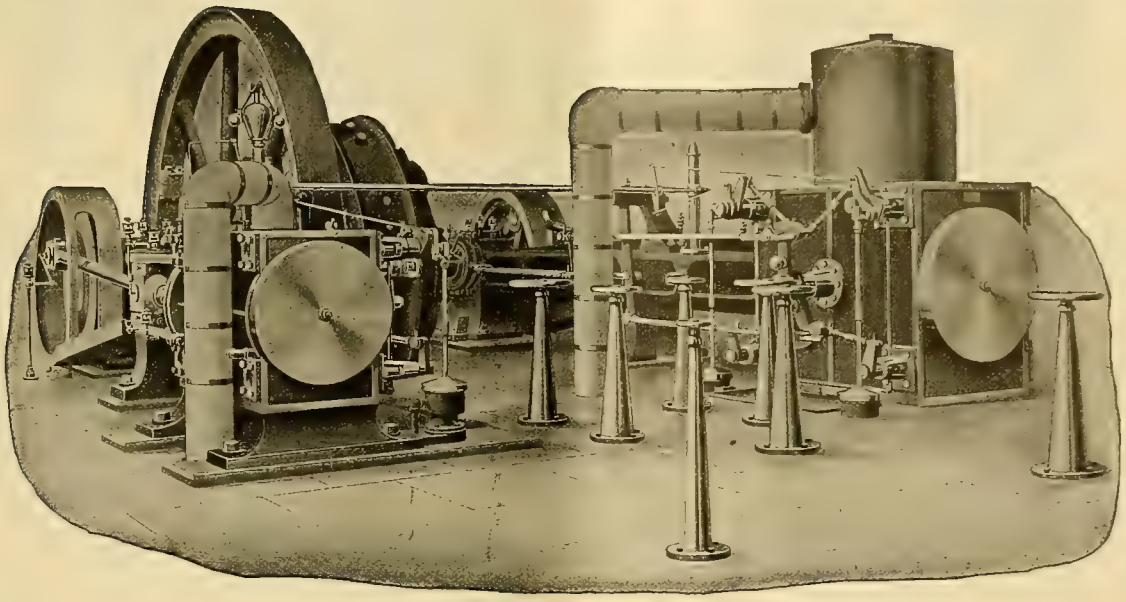
PACIFIC ELECTRIC CO., 120 MAIN STREET, LA CROSSE, WIS., U. S. A.

THIS IS THE ENGINE



AND HERE IS THE LETTER:

San Antonio Street Ry. Co.,
San Antonio, Texas.

W. H. Weiss, President.

Murray Iron Works Company, Sept. 10, 1898.
Burlington, Iowa.

Dear Sirs:

We are pleased to tell you that the 20x36x48 cross compound-condensing Sioux Corliss engine, manufactured and installed for us by you, has now been in continuous operation, twenty hours per day, since May 1st, during which time it has handled our entire railway load with ease and perfect satisfaction. The engine operates quietly, smoothly and economically, and our coal consumption has been materially decreased since we began its operation, while our load now is fully 25 per cent greater than theretofore.

The design, workmanship and finish are of the highest order and reflect much credit upon the designer and manufacturer.

We shall take great pleasure in showing this apparatus to intending purchasers at any time, and are confident that anyone requiring a Corliss engine, after seeing ours, and seeing it operate, cannot but be favorably impressed with the same.

We cannot close without adding that you have done more, in each and every particular, in connection with this job, than your agreement called for, and that in all of our experience in this business we have never met with more painstaking and agreeable treatment.

Wishing you continued success, we beg to remain,

Yours truly, W. H. WEISS, President.

WE CAN BUILD MORE LIKE IT.

(Also Boilers—Tubular and Internal Furnace.)

THE MURRAY IRON WORKS COMPANY,

BURLINGTON, IOWA.

PEGAMOID

TRADE MARK.

PEGAMOID BRAND LEATHER.

The only real and successful substitute for leather. Having achieved a permanent success abroad, it is now being manufactured and introduced in this country. Made in all shades of color, even white and delicate tints. Embossed in many beautiful designs, or in plain leather, grain or flat. Matt or lustrous finish. Russia leather scented or with other odors if desired. Morocco, Pigskin, Pebble, Seal, Crocodile, Venetian, Cordova and other hides are perfectly reproduced. The bright surfaces of the lower portion of the pattern are better retained than with hide leather. For wall decorations, furniture coverings, carriage fittings, car seats, car curtains, head linings, etc., it is unrivaled. Does not contain oxidized or sulphurized oils or rubber. The surface of the leather cannot be split off. It has no nasty odor; extremes of heat and cold do not affect it; it stands exposure to weather. For cushions, etc., of yachts it is superior to anything. It is proof against water, oil, grease and dirt. Easily washed with soap and water, and can be antisepticized or disinfected. It will not peel, rot, crack or get sticky, and is extraordinarily durable. It has the "feel" of real hide leather, and is far less easily scratched. Burns with difficulty. Will not tear. To insure against imitation and substitution, look for trade mark "Pegamoid" stamped on all goods.

Pegamoid Brand Aluminum Leather Surface.

A most remarkable novelty. Leather cloth and paper surfaced with aluminum. Smooth or beautifully embossed. Washable. Opens up an entirely new field in decoration and artistic effects in frosted silver. Applied like wall paper. Untarnished by sewer gas. Saves light in illumination.

Pegamoid Brand Aluminum Paint.

Looks like frosted silver. Washable, untarnishable, water, oil and grease proof. Easily applied. Dries quickly. Superb for decoration, metal work, parts of machinery, pipes, radiators, seat frames, elevator fronts, ceilings, etc.

Bright Metal Protector.

Easily applied, forming an invisible film, and protecting polished steel against rust and corrosion.

Brass Lacquette No. 1.

Dries without brush marks, and protects polished brass surfaces against tarnish and exposure.

Enamelette.

A tank composition for barrels, tanks, tunnels, machinery in mines and damp places, cellars, subways, metal structural work. Not affected by petroleum, turpentine, water, salt air, deleterious gases or atmospheric influences. Will not chip or check.

Samples and Circulars on application. Goods exhibited at offices.

THE AMERICAN PEGAMOID CO.,

STREET RAILWAY MEN—And others engaged in electric railway work will be interested in

THE MOTOR ENGINEERS' AND ELECTRICAL WORKERS' HAND-BOOK.

By WM. LUYTERN.

The Motor Engineers' and Electrical Workers' Hand-Book is compiled with a view of furnishing a book of reference in a simple and convenient form for the use of motor engineers and street railway men. The diagrams of controller connections and combinations will be found of great value in practical work. The methods of testing are both simple and reliable. The writer is indebted to the Westinghouse, General Electric, Walker and Steel Motor companies for information cheerfully furnished.

TABLE OF CONTENTS.

Chapter I.—Elementary Principles. Units, Ohm's Law, Watt, Kilowatt, Ampere, Turn, Hour, etc. Potential, E. M. F., Voltage, Drop of Potential, Resistance (Ohmic), Conductivity. **Chapter II.**—Magnetism and Electro-Magnetic Induction. **Chapter III.**—Circuits: Varieties of Circuits, Series, Shunt, Parallel or Multiple Arc, Joint Resistances of Parallel Circuits, Multiple Series, Series Multiple. **Chapter IV.** Dynamo Electric Machine. General Principles, Field Windings, (Varieties), Series, Shunt, Compound, etc. Short Shunt, Long Shunt. **Chapter V.**—Instructions for Operating Generators: Running a Single Generator, To Shut Down a Machine Not Run in Multiple, Sparking, Polarity, Excitation Grounds, Generators in Multiple, Connections, Running Generators in Multiple. To Shut Down a Machine Running in Multiple. **Chapter VI.**—The Electric Motor: General Principles, Counter Electromotive Force and Mechanical Power, Efficiency. **Chapter VII.**—Measurements and Tests of Street Railway Motors—Faults, Measurement by Drop of Potential Method (Examples), Insulation Tests, Voltmeter Method, Description of Voltmeter and Ammeter, The Wheatstone Bridge, Instructions for Operating, Drop of Potential in Motor Circuits. **Chapter VIII.**—Instructions for Operating Car Apparatus: Brushes, Sparking at Brushes, Bearings, Bucking, Fuse, Block, Operating Car, Trolley, etc. **Chapter IX.**—The Electric Motor Car in Detail. Series, Parallel, Controller, Reverse Switch, Rheostat, Fuse Box, Lightning Arrester, Heaters. **Chapter X.**—Definitions of Terms. **Chapter XI.**—Diagrams of Car Wiring and Controllers, with Written Descriptions and Diagrams of Combinations: Westinghouse System (G. No. 14, No. 28 and 28 A). General Electric-(K. with W. P. Machines, K 2; General Electric Series Parallel Controller with Magnetic Brake). Walker System (B2, E) Steel Motor Co. System. **Chapter XII.**—General Electrical and Mechanical Information. Belting, Shafting, Pulleys and Gears, Melting Point, Specific Gravity and Relative Conductivity, Table Comparing Wire Gauges, Number, Dimensions, Height, Length and Resistance of Pure Copper Wire, Electrical Units and Formulas, Equivalent Carrying Capacity, Proportions of Gear Teeth Notes, Bill of Material for Span Wire Construction (Single Track) (Double Track), Bracket Construction, (Single Track) (Center Pole) (Double Track).

160 pages. Handsomely bound in cloth, $1.00. Heavy boards, 50c. Sent on receipt of price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

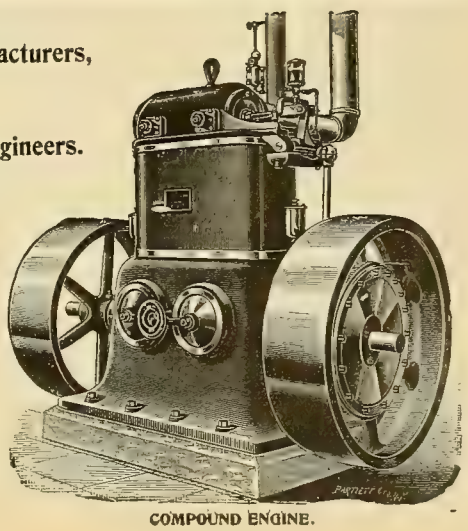
The Westinghouse Machine Company, Manufacturers,

Westinghouse, Church, Kerr & Company, Engineers.

Ten years ago the **Westinghouse Compound Engine** made the world's record for economic duty of **non-condensing engines.**

That record was attested by an engineer of unquestioned ability and standing. **It has been verified** by able experts many times since.

It stands to this day UNTOUCHED.



COMPOUND ENGINE.

Manufacturers of the STANDARD ELECTRICAL APPARATUS of the World

NOW IS THE TIME TO PROTECT YOUR APPARATUS FROM LIGHTNING, AND

The "S. K. C." Alternating Current Lightning Arrester

AFFORDS RELIABLE AND DURABLE PROTECTION.

In it the defects of the principal lightning arresters on the market are overcome. The E. M. F. required for discharges is less than is dangerous to the insulation of the system. The insulation of the arrester itself is very high. Liability to short circuits is avoided. Arc is quickly broken without excessive flow of dynamo current. Construction is strong and durable, and formation of arcs through accumulation of dirt, dust, bugs, etc., is impossible. Our choke coils add no self induction to the lines so far as dynamo current is concerned.

Correspondence solicited.

STANLEY ELECTRIC MANUFACTURING COMPANY,

PITTSFIELD, MASS., U. S. A.

THE ROYAL ELECTRIC CO., Montreal, Canada, are sole licensees for the manufacture and sale of the S. K. C. System in Canada.

Iron Roof For Sale.

Width of building, 135 feet out to out, divided into a center span 46 feet with a wing on each side 43 feet 6 inches; total length of the building 350 feet. This building is designed with brick sides and gable walls, with iron roof trusses and iron supporting columns; originally built for an iron foundry, but owing to the failure of the purchaser is now offered for sale at a bargain. Is admirably adapted for a foundry for light or heavy castings, machine shop, car barn, or for any other general manufacturing purposes. We guarantee the iron work as good as new, building never having been used. Apply to

Illuminated Dial Station Instruments.

These instruments are based upon the same general principle and are just as accurate as our regular Standard Portable Direct Current Voltmeters and Ammeters, but are much larger, and the working parts are inclosed in a neatly designed, dust-proof cast-iron case which effectively shields the instruments from disturbing influences of external magnetic fields.

Weston Standard Illuminated Dial Potential Indicator, Style B. "Flush Type."

Weston Standard

Portable Direct-Reading Voltmeters and Millivoltmeters. Ammeters and Milammeters, Wattmeters and Voltmeters, for Alternating and Direct Current Circuits.

Our portable instruments are recognized as standards throughout the civilized world.

Our Semi-Portable Laboratory Standard Voltmeters and Ammeters are still better.

They are the most reliable, absolute standards for Laboratory use.

All genuine "ELECTRA" Carbons are put up in packages bearing a label with the TRADE MARK "ELECTRA."

Infringers of my trade-mark will be rigidly prosecuted to protect the interest of purchasers of my carbons.

Notice—The "ELECTRA" Highest Grade Nuernberg Carbons are, as heretofore, manufactured for me by the world-renowned firm of **C. Conradty, of Nuernberg,** who owns both the oldest as well as the **largest carbon works in existence,** and whose carbons are recognized as the standard all the world over.

The Best System of Belting in the World

The C. L. P. & D. Transmitter Co.
MONTPELIER, VT.

Compared with Straight Belts - - { Easier on bearings, Smaller per cent. of slip, One-half the space.

Compared with Clutches - - - - { Less expense, More efficient in operation, Great saving in space.

Compared with Direct Coupling - { About the same floor space, Cost much smaller, Easier to keep in repair.

Write for Further Particulars.

INCANDESCENT LAMPS 12 cents.

Now is the time to get your burned out lamps together and have them renewed or turned into cash. We have now repaired over 700,000 lamps, and nine out of ten of our shipments are to old customers.

We use the same care as regards voltage, candle power, etc., as in making our new lamps.

We are now pleasing central station managers by supplying a uniform and efficient lamp at a price that makes it profitable to replace lamps every 600 hours or oftener.

The renewal of lamps makes this possible.

If you prefer new lamps, we can supply you with the best and allow you three cents each for your burned out lamps.

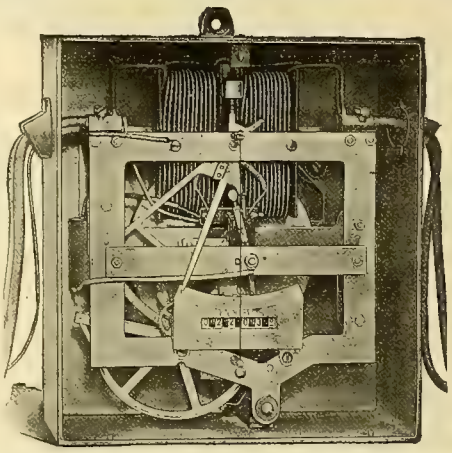
THE AMERICAN ELECTRIC METER CO.

9th St. and Montgomery Ave., Philadelphia, Pa.,



Is now prepared to take orders for immediate delivery of all sizes of 3-Wire Constant Potential Registering Meters.

This meter is calibrated ready for instant use.
This meter requires no knowledge of electricity to erect.
This meter shows the load passing every instant.
This meter is hermetically sealed.
This meter measures correctly with uneven loads.
This meter is magnetically shielded and has no permanent magnetism.
This meter can be calibrated with a watch in six minutes.
This meter requires no lubrication.
This meter is direct reading, having no multiplier or dials.
This meter will operate for years without opening.
This meter has no springs, jewels, frictional errors or lag.
This meter once right is always right.

PERHAPS YOU HAVE HEARD

Of a railway system running between Chicago, Milwaukee, St. Paul, Minneapolis, Ashland and Duluth, known as the Wisconsin Central Lines. Before making a journey to any of these northwestern points, inquire relative to the fast and elegantly equipped trains which leave Chicago daily via the Wisconsin Central. Your nearest ticket agent can give you complete information.

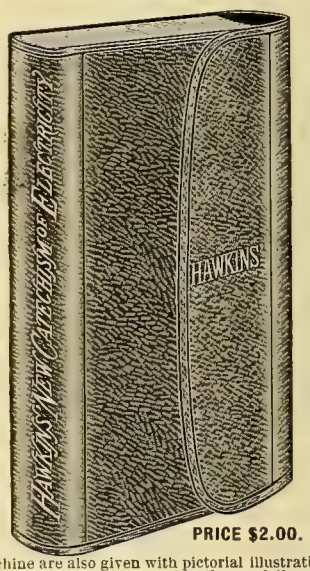
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

THE OMAHA EXPOSITION.

When the World's Fair at Chicago ceased to exist, it was supposed that we should never look upon its like again. However, the Trans-Mississippi Exposition at Omaha has effectively reproduced in similarity all of the buildings which made the White City so attractive in 1893.

It does not now take two weeks to wander through grounds and structures and then be compelled to go away with a jumble of ideas, for the Omaha Exposition people have profited by past experience, and have so improved the arrangement of exhibits that no more than two or three days of time need be consumed in admiration and inspection of the marvelous resources of the West, collected together in the chief city of Nebraska.

Even the new Midway is a reproduction of the far-famed Street of All Nations of 1893, with many improvements upon the original.

The electric lighting of the buildings, grounds and lagoons at night makes a scene of enchanting beauty, alone worth traveling a thousand miles to see.

The means of communication between the city and grounds are ample, and the distance to be traversed is short.

The ways of reaching Omaha are innumerable, but chief among them is the direct Chicago and Omaha short line of the Chicago, Milwaukee & St. Paul Railway, with its electric lighted, vestibuled trains, leaving Chicago every night at 6:15 p. m., and arriving Omaha at 8:20 the next morning. Dining car service en route.

Excursion tickets are on sale at every coupon ticket office in the United States over the Chicago, Milwaukee & St. Paul Railway through Northern Illinois and Central Iowa, as well as at 95 Adams street, and at the Union Passenger Station, Canal and Adams streets, Chicago.

Who Leads in Telephone Wood Specialties?

The Cabinet Manufacturing Company,

STEUBENVILLE, OHIO.

THEY STILL USE IT.

Stover Bicycle Manufacturing Co.

IT COSTS SO LITTLE AND WORKS SO WELL

FREEPORT, ILL., March 2nd, 1897.

The Boiler Expurgator Co., Chicago, Ill.

Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time.

Very truly yours,
STOVER BICYCLE MFG. CO.
W. A. Hance, Supt.

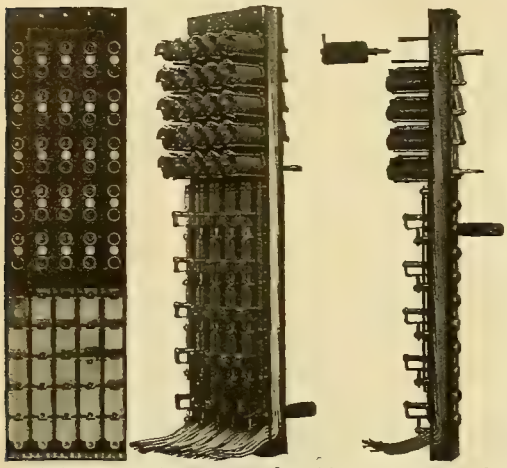
The Most Reliable General Telephone Apparatus Manufacturers in the World.

THE VICTOR TELEPHONE MFG. CO.,

166 to 174 S. CLINTON ST., CHICAGO.

Fully Protected by Patents.



All other makes of boards have from *three to six wires* leading from jacks at back of board. **The Victor has none.**

A Victor one hundred cabinet may be partially fitted with jacks and drops to any portion of its capacity economically and increased gradually with **Victor** five jack and drop sections, according to requirements.

The Victor Metallic Express Switchboard is now upon the market. This board is the **most satisfactory** ever offered to the telephone public. It is **durable** and **simple,** containing no **useless trappings or superficial parts.** It is durable and simple in construction, **easy and rapid to operate** and **inexpensive to maintain. All parts** are **interchangeable and accessible without interfering with other parts or interruption of operation.** This board is built in sections of five drops and jacks, mounted on hard rubber, **invisibly wired** and so constructed that when assembled it has the appearance and in fact is **one solid front.** Each subscriber has an **individual ringing key** and the **gravity drop** used is a special feature, owing to its **positive action and easy restoration.**

Our **VICTOR** exchange and long-distance telephones are equipped with our **powerful** and **never failing generators** and **ringers, positive contact switch, our high efficiency solid back transmitters and VICTOR bi-polar receivers.**

OUR SPECIALTIES ARE:

The Victor

Non-Disconnecting Lightning Arresters.
Combination Cross Connecting Fuse Board.
Fusible Cut-Out Blocks.
Special Extension Bells.
Special Bridging Bells.
Special Generators.

Write us for details and particulars and we will surely interest you.

Victor Telephone Manufacturing Co.,

166 to 174 S. CLINTON ST., CHICAGO.

THE ORATOR.

The ORATOR AND Improved Hunnings

solid back dust transmitters in Wall, Desk and Cabinet Styles. They are **Convenient, Durable** and the **best** of **talkers.**

A trial will convince anyone of their superiority on either short or long distance work.

Anyone can make an instrument that will work well at first, but to produce one that will **continue** to meet every proper demand is quite another problem.

The **ORATOR** will.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 93 Pages. 47 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice, and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers. Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony.
Appendix.

The Electrical Transmission of Energy.

A Manual for the Design of Electrical Circuits; by Arthur Vaughan Abbott, C. E., Chief Eng. Chicago Telephone Co.
With 9 Folding Plates. 586 Pages. 289 Illustrations and 74 Tables. Size of page, 6x9 in. Price $4.50.

READ THE TABLE OF CONTENTS:

CHAPTER I.

Introduction.—Distribution in General—Distribution in Series—Distribution in Parallel—Mixed Systems—Indirect Distribution.

CHAPTER II.

The Properties of Wire.—The Conducting Circuit—Wire Manufacture—Hard Drawing—Wire Gauges The Circular Mil—Copper Wire—Properties of Wire—Composite Wire—Galvanizing and Tinning—Insulated Wire - Flexible Cable—Testing and Inspection—Wire Specifications—Tension of Aerial Lines—The Influence of the Variation of Temperature.

CHAPTER III.

The Construction of Aerial Circuits.—*Part I. General Line Work.* Classification—Aerial Lines—Poles—Methods of Preservation—Height of Poles—Cross Arms—Pins—Facing of Arms—Stresses—Calculation for Pole Strength—Guying—Anchor Poles—Setting Poles—Insulators—Value of Insulators—Oil Insulators—Tying and Dead-Ending—Loops—Stringing Wires—Wire Joints—Strength of Joints—The Suspension of Aerial Cables—Humming of Wires—Transposition of Telephone Lines—Power Circuits—Pole Line Specifications. *Part II. Electric Railway Circuits.* Electric Railway Circuits—Railway Return Circuit—Electrolytic Action—Railway Poles—Wooden Poles—Iron Poles—Feed Wire Insulators and Pole Tops—Trolley Insulators—Railway Line Work—Strain Insulators—Anchors—Line Sections—Switches—Line Crossings. *Part III. Lightning Arresters.* Lightning Guards and Strong Current Arresters—High Resistance Arrester—Magnetic Blow-out Arrester—Mechanical Magnet Arrester—Air Expansion Arrester—Non-Arcing Metal Arrester—Discriminating Arresters—Automatic Cut-outs—Cable and Switchboard Protectors—Appendix of Insurance Regulations.

CHAPTER IV.

Construction of Underground Circuits.—*Part I. Conduits.* Classification—Valentine Conduit—Wyckoff Conduit—Paper Conduit—Pipe Conduits—Dorset Conduit—Chenowith Conduit—Terra-cotta Conduits—Crompton System—Brooks System—Johnstone System—Kennedy System—St. James System—Inflexible Systems—Callender Solid System—Cologne Conduit—Zurich Conduit—Manholes—Junction Boxes for Street Railway Feeds—Introduction of Circuits—Pneumatic Rodding—Gas—Electric Railway Conduits—Buda-Pesth Conduit—Blackpool Conduit—Love Conduit—Lenox Avenue Conduit—Metallic Conduits for Alternating Currents. *Part II. Cables and Conduit Conductors.* Conduit Conductors—Armored Cables—The Siemens Cable—The Edison System—The Ferranti Mains—Telegraph Cables—Subaqueous Cables—Power Circuits—Paper Cables—Telephone Cables—British Post Office Cables—The Patterson Cable—Glover Cables—Fowler Waring Cables—Felten-Guilleaume Cable—Beaded Cables—Cable Joints—The Connection of Underground and Aerial Systems—Cable Heads.

CHAPTER V.

Electrical Instruments. — Classification — Instruments for Measurement of Resistance—Wheatstone Bridge—Slide Wire Bridge—Ohm-Meter—Instruments for Measuring Quantity and Pressure—D'Arsonval Galvanometer—Ballistic Galvanometer—Galvanometer Constants—Reduction to Zero and Inferred Zero—Shunts—Weston Instruments—Cardew Voltmeter—Electrostatic Voltmeter—Siemens Dynamometer—Condensers—Wattmeters—Keys—Magnet—Ground Indicators—Boyer Speed Recorder.

CHAPTER VI.

Methods of Electrical Measurement. Quantities to be Measured—Electrical Intensity—Electrical Quantity—Unit of Current—The Watt—Capacity—Resistance—Ohm's Law—Kirchhoff's Laws—Measurement of Resistance by Deflection—By Wheatstone Bridge—By Voltmeter—By Volt and Ammeter—Measurement of Small Resistance—High Resistance—Insulation Resistance—By Loss of Charge—Line Resistance—Ground Resistance—Special Methods for Galvanometer Resistance—For Battery Resistance—Potential Difference—By Condenser—Wheatstone's Method—Lumsden's Method—Measurement of Current Strength—By Ammeter—By Voltmeter—By Differential Galvanometer—By Slide Wire—Measurement of Capacity—Thomson's Method—Gott's Method—Divided Charge Method—Localization of Faults—Blavier's Method—Overlap Method—Loop Test—Murray's and Varley's Methods—Localization of Crosses—Measurement of Inductance—By Condenser and Bridge—With Alternating Current—Mutual Inductance—Measurement on Alternating Currents—Difference of Potential—Current—Power by Two Voltmeters—By Three Ammeters—Measurement on Polyphase Circuits—Electrical Railway Testing—Capacity of Aerial Lines—The Inductance of Aerial Lines—Mutual Inductance on Transmission Lines.

CHAPTER VII.

Continuous Current Conductors. *Part I. Conductors and Insulators.* Conductors—Resistance—Ohm's Law—Specific Resistance—Effect of Temperature—Resistance of Dielectrics—Line Leakage—Distribution of Potential—The Effect of Leakage—Conductance—Distribution of Potential in Branch Circuits. *Part II. The Heating of Conductors.* Joule's Law—Location of Circuits—Bare Wires Freely Suspended—Radiation and Convection—Paneled Wire—Insulated Wire Freely Suspended—Rheostats and Heaters—Cost of Electric Heating—Fuse Wires—Heating of Insulated Cables—Heating of Conduit Cables—Heating of Suspended Cables.

CHAPTER VIII.

Conductors for Alternating Currents. General Considerations—Classification—Skin Effect—Current Density—Inductance—Magnetic Field—Electromotive Force Due to Varying Field—Equation of Energy—Harmonic Motion—Average Values—The Solution of the Energy Equation—Effect of Mutual Inductance—General Energy Equation for Mutually Inductive Circuits—Coefficients of Inductance—Effect of Capacity—Solution of the Energy Equation for Circuits with Capacity—The Energy Equation for Circuits Containing Resistance—Inductance and Capacity—Graphical Methods—Vector Quantities—Composition and Resolution of E. M. F.—Simple Circuits with One Resistance and Inductance in Series—Reactance—Impedance—Resistance Variable—Inductance Variable—Simple Circuits with Several Resistances and Inductances in Series—Simple Circuits with One Resistance and Capacity in Series—Simple Circuits with Several Resistances, Inductances and Capacities in Series—Circuits with Resistance, Inductance and Capacity in Parallel—Method of Equivalent Resistance and Inductance—Circuits Containing Mutual Inductance—Impedance Tables.

CHAPTER IX.

Series Distribution. Origin—Classification—Constant Current Circuits with Generator and Motor at Fixed Distances—Location of Station—Current Density in Main Circuit—Economic Conditions—Design for Heating-Limit—Design for Mechanical Strength—Minimum First Cost of Line—Minimum First Cost of Station—Minimum First Cost of Plant and Cost of Maintenance and Operation—Design for Minimum First Cost of Plant—Design for Best Service—Minimum Cost of Plant for Maximum Income—Calculation of Loads—Regulation—Automatic Cut-outs.

CHAPTER X.

Parallel Distribution.—The Evolution of the Parallel System—Methods of Distribution—The Loop System—The Spiral Loop—The Tree System—The Closet System—Conical Conductors—Anti-Parallel Feeding—Distribution of Potential—Cylindrical Conductors, Parallel Feeding—Cylindrical Conductors, Anti-parallel Feeding—Conical Conductors, Parallel Feeding—Conical Conductors, Anti-parallel Feeding—Three-wire System—Multiple Series System—Five-Wire System—Relative Area Covered by the Multiple Wire Systems—Feeder and Main System—Location of Central Station—Location of the Feeders and Centers of Distribution—Distributing Mains—Calculation of Feeders—Efficiency of Conductors—Methods of Regulation—The Compensator in Electrical Railway Work—Fall of Pressure and Necessary Section for Feeders—Laws of Economy and Feeder Design—General Design for a System in Multiple Arc—Mechanical Methods—Station Loads—Arc Lamps on Constant Potential Circuits—Electric Railway Wiring—Three-wire Railway Systems.

CHAPTER XI.

Miscellaneous Methods and Long Distance Transmission.—Motor Transformers—Compensators—Motor Transformers Running and Feeding in Series—High and Low Potential Distribution from the Same Station—Accumulators—Sub-station Accumulators—Accumulator Distribution—Regulation by Means of Accumulators—Transformers—Economy in Conductors—Isolated Transformers—Efficiency of Distribution by Isolated Transformers—Transformers as Sub-stations—Polyphase Systems—Long-distance Plants—Long-distance Transmission with Continuous Currents—Line Construction for Long-distance Transmission—Relative Amount of Conducting Material for Transmission Systems.

CHAPTER XII.

The Cost of Production and Distribution.—Cost of Conductors—Cost of Conduits—Telephone and Telegraph Lines—Railway Lines—Cost of Power Stations—Cost of Producing Energy—Coal Consumption per Watt-hour—Water Power—The Gas Engine—The Cost of Electrical Energy, as Developed by Wind Power—The Actual Cost of Electrical Energy—Commercial Considerations of Transmission Problems.

Sent, expressage prepaid, on receipt of price, $4.50.

Electricity AND Magnetism.

325 Pages. PRICE $2.00. 347 Illustrations.

A series of Thirty-four Practical Lessons covering the Science of Electricity from Its Fundamental Principles to Its Every-Day Applications. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony, of New York; Prof. Brown Ayres, Tulane University; Prof. A. C. Perrine, Leland Stanford University, Cal.; Prof. Geo. D. Shephardson, University of Minnesota, and others.

A Comprehensive Treatise in Simple Language, Free from Algebraic Equations and Easily Understood.

CONTENTS:

CHAPTER I. **The Nature and Properties of Electricity.**—Origin of Electricity; Two Kinds; Laws of Attraction and Repulsion; Positive and Negative Charge; Terms, Conductors, Insulators, Electric Conductivity; Conveying Electricity; The Electroscope; Force Exerted Between Charged Bodies; Unit of Measurement of Quantity of Electricity; Electrometer.

CHAPTER II. **Machines for Generating Electricity by Friction and by Electric Induction.**—Making Machine to Continuously Generate Electricity by Friction; The Electrophorus; Induction Generator; Units of Electric Current and Pressure; Electricity Conveyed by Unit Current Each Second; Negatively and Positively Charged Conductors; Relation of Lightning and Sparks of Electrical Machine.

CHAPTER III. **Electric Batteries or Appliances for Generating Electricity by Chemical Action.**—Action of Batteries; Electric Pressure; Voltaic Electricity; Direction of Current Flow; Production of Continuous Current; Battery Cells in Series; Production of Pressure by Cells: Polarization and Its Avoidance; Leclanche Cell; Open Circuit Cells.

CHAPTER IV. **Electric Batteries or Appliances for Generating Electricity by Chemical Action (Concluded).**—Closed Circuit Cells; Local Action; Law of Electro-chemical Action; Electro-chemical Equivalent; Primary Batteries Compared with Dynamos for Furnishing Current; Uses of Batteries; Difference Between a Primary and Storage Battery; How Storage Batteries are Made; Parallel Connection of Plates in Storage Batteries.

CHAPTER V. **The Nature and Properties of Magnetism, Magnetic Fields.**—Permanent Magnetism: Magnetic Attraction and Repulsion; Poles of Magnet; Magnitude of Force Between Two Magnets; Aging Magnets; Earth's Action on Magnetic Needle; Magnetic Field; Action of Lines of Force.

CHAPTER VI. **The Magnetic Effects of Electric Currents and Magnetic Circuits.**—Effect of Electric Current on Magnetic Needle; Relation Between Direction of Lines of Force and Direction of Current Flow; Determination of Current Direction by Compass; Ampere Turns; Solenoids; Ampere's Theory; Solenoids with Steel or Iron Cores; Residual Magnetism; Electro-Magnets; Magnetic Permeability; Magnetic Reluctance; Magneto Motive Force or Magnetic Pressure.

CHAPTER VII. **Ohm's Law of the Flow of Electricity.**—Pressure; Resistance; Current; Volt; Ohm; Ampere; Mercury Resistances; Conductivity of Copper Compared with Other Metals; Resistance of Circuits Made Up of the Same Parts in Parallel; Joint Resistances; Fall of Voltage Over Resistance; Effect of Temperature on Resistance; Copper Temperature Coefficient.

CHAPTER VIII. **Heating Effects of Electric Currents. Miscellaneous Effects of Electric Currents.**—Foot-pound; Joule; Horse-power; Watt; Kilowatt; Watts per Horse-power; Heating Effects on Bearings of Machinery; Effect of Electricity on Nerves of Animals; Muscular Effect of Strong Currents.

CHAPTER IX. **Galvanometers and Voltameters.**—Differences in Construction for Large and Small Currents; Presence and Direction of Currents Shown by Galvanometer; Strength of Current Indicated; Tangent Galvanometer; Reflecting Galvanometer; Needle Suspension; d'Arsonval Galvanometer; Terms "Dead-Beat," "Calibrate;" Voltameter; Electrolyte, Electrolysis; Electrode; Forms of Voltameters.

CHAPTER X. **Measurement of Electrical Resistance.**—Resistance Measured by Substitution; Resistance Boxes; Use of German Silver; Coils; Wheatstone Bridge; Measuring Resistances with Bridge; Measuring Very High Resistances; Practical Examples.

CHAPTER XI. **Every-day Measurements of Electric Currents and Pressure.**—Three Effects by Which Currents are Directly Measured; Amperemeters; Milliampere; Microampere; Three Classes of Magnetic Amperemeters; Weston Amperemeter; Electro Dynamometers; Hot Wire Instruments; Scales of Amperemeters; Alternating Current Measuring Instruments; Measuring Very Large Currents; Measuring Electric Pressures; Voltmeters; Cardew Voltmeter; Electrometers; Electrostatic Voltmeters; Standard Cells; Measuring Currents by Voltmeter and a Standard Resistance.

CHAPTER XII. **Every-day Measurements of Electric Power, Condensers and the Measurement of their Capacity.**—Wattmeters; Electrodynamometer Used as Wattmeter; Recording Wattmeters; Coulomb Meters; Watt Hour; Ampere Hour; Capacity; Farad; Microfarad; Condenser; Capacity of Condenser; Charging Condenser; Specific Inductive Capacity; Selection of Insulation for Telephone Cables; Capacity of Underground Wires; Comparing Capacities by Ballistic Galvanometer; Practical Capacity Measurements; Leyden Jar.

CHAPTER XIII. **Electrolytic Deposition of Metals.**—Electroplating; Metals Commonly Used in Plating; Salt of a Metal; Nitrate of Silver; Cyanide of Silver and of Potassium; Solution for Silver Plating; Vats; Quality of Electrolytic Deposit; Effect of Too Great or Small Currents; Cleaning Articles to be Plated; Gilding Inside of Silver Articles; Base Metals on Which Nickel is Usually Plated; Solution for Nickel Plating; Electrotyping; Electrotype Molds; Electrotype Finishing; Electrolytic Refining of Copper; Solution Used.

CHAPTER XIV. **The Electric Telegraph.**—Elements of Electric Telegraph; Telegraph Circuits; Telegraphic Signals; Sending and Receiving; Telegraph Lines; Sounder; Relays; Local Circuits; Multiple Telegraphy; Duplex Telegraphy; Diplex Telegraphy; Quadruplex Telegraphy.

CHAPTER XV. **Multiple Telegraphy.**—Differential Relay; Polarized Relay; Pole Changer; Principles of Operation of Diplex, Quadruplex, Bridge Duplex; Artificial Line; Autographic Telegraphy.

CHAPTER XVI. **The Telephone.**—Bell Telephone; Microphone; Blake Transmitter; Exchanges; Switchboard; Long-Distance Transmitter.

CHAPTER XVII. **The Construction of Telegraph and Telephone Lines and Instruments.**—Poles; Cross-Arms; Pins; Joints; Insulators; Insulation; Ground Plates; Underground Cables; Conduits; Fuses; Multiple Switchboards.

CHAPTER XVIII. **Testing Lines for Insulation and Conductivity and the Location of Leaks and Breaks.**—Line Troubles; Grounds; Crosses; Locating Trouble; Earth Currents; Line Conductivity and Insulation; Testing.

CHAPTER XIX. **Principles of Continuous Current Dynamos and Motors.**—Electric Conductor in Magnetic Field; Field Strength; Induced Electric Pressure; Direction of Current; Moving Conductors; Alternating Current; Dynamos; Magnetos; Commutator.

CHAPTER XX. **Principles of Continuous Current Dynamos and Motors, their Construction, Care and Attendance.**—Gramme Armature; Siemens Armature; Armature Current; Laminating Cores; Foucault or Eddy Currents; Hysteresis; Fundamental Principles of Dynamos and Motors; Points of Good Dynamo; Counter Electric Pressure; Types of Field Windings; Series, Shunt and Compound Wound Machines; Multipolar Machines; Regulation; Care and Maintenance.

CHAPTER XXI. **Arc Lighting and Arc Light Machinery.**—The Arc; Arc Lamps; Principles of Operation; Connections; Arc Dynamos; Current and Pressure Required; Making of Arc Carbons; Regulators; Arc Light Switchboards.

CHAPTER XXII. **Incandescent Lighting and Power Transmission, Two, Three and Five Wire Systems of Distribution for Electric Lights and Motors.**—Incandescent Lamp; Filaments; Vaccuum; Material for and Making of Filaments; Advantages of Incandescent Lamps; Incandescent and Motor Circuits; Constant Pressure; Loss of Voltage; Circular Mils; Practical Examples; Weight of Copper Required for Transmission of Power at Different Pressures; Three-Wire System; Motor Starting Resistances.

CHAPTER XXIII. **Construction of Electric Light and Power Circuits, and Their Testing.**—Overhead Electric Light Wires; Weather-Proof Wire; Arc Circuit Wires; "Drawing In" and "Built In" Underground System; Underground Electric Light Cables; Edison Tubing; Feeders; Mains; Inside Wiring; Cleat Work; Moulding Work; Concealed Work; Dangers from Fires; Distribution System.

CHAPTER XXIV. **Testing Electric Light Circuits and the Distribution and Measurement of Light.**—Faults; Soldered Joints; Magneto Bell; Use of Voltmeter to Locate Grounds on Arc Circuits; Ground Detector; General Testing; Photometer; Standard Candles; Illuminating Effect of Lamps; Effect of Opal Globes.

CHAPTER XXV. **Electro-Magnetic Induction.**—Effect of Cutting Lines of Force by an Electric Conductor; Induced Currents; Induction Coils; Cores of Induction Coils; Transformers; Direction of Induced Current; Self Induction; Attraction and Repulsion of Parallel Wires Carrying Currents.

CHAPTER XXVI. **Alternating Currents.**—Alternator; Electrolytic Effect of Pulsating Current; Heating Effect of Alternating Current; Effective Value; Alternating Current; Measurements; Frequency; Period; Apparent Resistance.

CHAPTER XXVII. **Alternating Currents and Alternating Current Machinery (Concluded).**—Power Used in Alternating Circuits; Alternating Currents for Lighting; Making Transformers; Testing Transformers; Building Alternators; Number of Alternations; The Exciter; Running Alternators in Parallel; Synchronous Motors, Two-Phase and Three-Phase Systems; Induction Motors; Squirrel-Cage Armature; Mesh Connection; Star Connection.

CHAPTER XXVIII. **Miscellaneous Applications of Electric Motors.**—Uses of Electric Motors; Motors in Machine Shops; Waste of Power in Factories; Advantages of Removing Shafts and Belts; Estimating Electrical Power Required; Electric Elevators; Electric Launches;.

CHAPTER XXIX. **Electric Railways.**—Richmond Electric Railroad; Trolley Wire; Trolley; Track; Use of Two Motors; Rail Bonds; Heavy Electric Locomotives.

CHAPTER XXX. **Methods of Handling and Controlling Railway Motors and Generators.**—Output Records; Recording Voltmeters; Load of Electric Railway Plant; Application of Storage Batteries to Smooth Road Curve; Methods of Controlling Street Car Motors; Station Instruments; Equalizer.

CHAPTER XXXI. **Model Electric Plants.**—First Central Station; Changes in General Mechanical Construction of Dynamos; Instruments; Multiple Arcing Galvanometers; Use of Double and Single Pole Switches; Operating Dynamos in Parallel; Feeder Connections in Continuous and Alternating Stations; Throwing Dynamo Into Circuit; Cutting Dynamo Out.

CHAPTER XXXII. **Underwriter's Rules, Etc.**—Necessity of Rules; Special Points in Wiring; Insulation of Sockets, Fuses, Fixtures; Annunciator Wire; Office Wire; Leaky Wires.

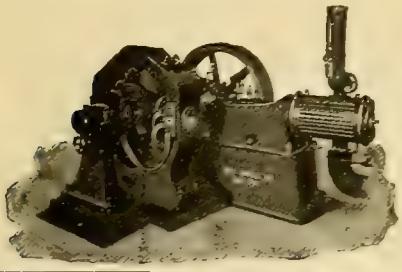
CHAPTER XXXIII. **Electric Welding, Forging, Etc.; Electricity Applied to the Kitchen.**—Electrical Methods Applied to Metal Working; Thomson Apparatus for Heating Metals; Welding by Thomson Method; Bernardos Process of Working Metals; Bringing Piece of Metal to High Temperature by Dipping in Pail of Water; Electric Current for Warming and Cooking; Electric Heating and Stoves Compared.

CHAPTER XXXIV. Electro-Therapeutics; Galvanic Current; Faradic Current; Static Electricity; Electric Osmosis; Electro-Cautery; Medical Electric Lights.

PRICE $2.00. Sent postage prepaid to any address in the world on receipt of price. The Ideal Work for Electricians, Central Station Men, Engineers, Dynamo Tenders, Linemen, Students, Etc.

Electrician Publishing Co.,

510 MARQUETTE BUILDING, CHICAGO.



We build Horizontal and Vertical, Simple and Compound, Medium and High Speed Engines. They embody all modern requirements, and are unequaled for electric lighting. The workmanship and materials are of the highest quality, and the engines excel in economy, simplicity, durability, and regulation.

THE BALL ENGINE CO.,

CHICAGO OFFICE:

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 7,000 of the new.

Electrician Publishing Co.,
510 Marquette Building, CHICAGO.

Manila Rope Power Transmissions

Designed and erected to suit existing conditions and available space, employing "Link-Belt" sheaves, with

Patent Machine Moulded Grooves

insuring absolute uniformity, and presenting the highest mechanical development in Rope Drive operation. Also manufacturers of

Shafting, Shaft Bearings, Pulleys, Gearing, Friction Clutches, Etc.

Parties contemplating enlarging their plants will do well to secure our prices.

STREET RAILWAY MEN

—And others engaged in electric railway work will be interested in

THE MOTOR ENGINEERS' AND ELECTRICAL WORKERS' HAND-BOOK.

By WM. LISTERN.

The Motor Engineers' and Electrical Workers' Hand-Book is compiled with a view of furnishing a book of reference in a simple and convenient form for the use of motor engineers and street railway men. The diagrams of controller connections and combinations will be found of great value in practical work. The methods of testing are both simple and reliable. The writer is indebted to the Westinghouse, General Electric, Walker and Steel Motor companies for information cheerfully furnished.

TABLE OF CONTENTS.

Chapter I.—Elementary Principles. Units, Ohm's Law, Watt, Kilowatt, Ampere, Turn, Hour, etc. Potential, E. M. F., Voltage, Drop of Potential, Resistance (Ohmic), Conductivity. **Chapter II.**—Magnetism and Electro-Magnetic Induction. **Chapter III.**—Circuits: Varieties of Circuits, Series, Shunt, Parallel or Multiple Arc, Joint Resistances of Parallel Circuits, Multiple Series, Series Multiple. **Chapter IV.** Dynamo Electric Machine, General Principles, Field Windings, (Varieties), Series, Shunt, Compound, etc. Short Shunt, Long Shunt. **Chapter V.**—Instructions for Operating Generators: Running a Single Generator, To Shut Down a Machine Not Run in Multiple, Sparking, Polarity, Excitation Grounds, Generators in Multiple, Connections, Running Generators in Multiple, To Shut Down a Machine Running in Multiple. **Chapter VI.**—The Electric Motor: General Principles, Counter Electromotive Force and Mechanical Power, Efficiency. **Chapter VII.**—Measurements and Tests of Street Railway Motors—Faults, Measurement by Drop of Potential Method Examples), Insulation Tests, Voltmeter Method, Description of Voltmeter and Ammeter, The Wheatstone Bridge, Instructions for Operating, Drop of Potential in Motor Circuits. **Chapter VIII.**—Instructions for Operating Car Apparatus: Brushes, Sparking at Brushes, Bearings, Bucking, Fuse, Block, Operating Car, Trolley, etc. **Chapter IX.**—The Electric Motor Car in Detail, Series, Parallel, Controller, Reverse Switch, Rheostat, Fuse Box, Lightning Arrester, Heaters. **Chapter X.**—Definitions of Terms. **Chapter XI.**—Diagrams of Car Wiring and Controllers, with Written Descriptions and Diagrams of Combinations: Westinghouse System (G. No. 14, No. 28 and 28 A), General Electric (K, with W. P. Machines, K 2; General Electric Series Parallel Controller with Magnetic Brake), Walker System (B2, E) Steel Motor Co. System. **Chapter XII.**—General Electrical and Mechanical Information. Belting, Shafting, Pulleys and Gears, Melting Point, Specific Gravity and Relative Conductivity, Table Comparing Wire Gauges, Number, Dimensions, Height, Length and Resistance of Pure Copper Wire, Electrical Units and Formulas, Equivalent Carrying Capacity, Proportions of Gear Teeth, Notes, Bill of Material for Span Wire Construction (Single Track) (Double Track), Bracket Construction, (Single Track) (Center Pole) (Double Track).

160 pages. Handsomely bound in cloth, $1.00. Heavy boards, 50c. Sent on receipt of price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

The Westinghouse Machine Company, Manufacturers,

Westinghouse, Church, Kerr & Company, Engineers.

Ten years ago the **Westinghouse Compound Engine** made the world's record for economic duty of **non-condensing engines.**

That record was attested by an engineer of unquestioned ability and standing. **It has been verified** by able experts many times since.

It stands to this day UNTOUCHED.

NOW IS THE TIME TO PROTECT YOUR APPARATUS FROM LIGHTNING, AND

The "S. K. C." Alternating Current Lightning Arrester

AFFORDS RELIABLE AND DURABLE PROTECTION.

In it the defects of the principal lightning arresters on the market are overcome. The E. M. F. required for discharges is less than is dangerous to the insulation of the system. The insulation of the arrester itself is very high. Liability to short circuits is avoided. Arc is quickly broken without excessive flow of dynamo current. Construction is strong and durable, and formation of arcs through accumulation of dirt, dust, bugs, etc., is impossible. Our choke coils add no self induction to the lines so far as dynamo current is concerned.

Correspondence solicited.

SWITCH BOARDS. SWITCHES AND PANEL BOARDS.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY, - - - Suite 510 Marquette Building, Chicago, Ill.

MUNICIPAL OWNERSHIP:

ITS FALLACY.

With legal and editorial opinions, tables and cost of lights as furnished by private companies and municipal plants.

BY M. J. FRANCISCO.

—THE—

MOTORMAN'S GUIDE,

A PRACTICAL TREATISE

—ON—

Street Railway Motors;

—OR—

How to Become a Practical Motorman.

By J. W. CAYETTY.

Price, = = = = = = $1.00

CONTENTS.

1. Introduction. 2. Car wiring. 3. How to locate trouble in your car while on the road. 4. How to cut out a motor. 5. Information on "K" controllers. 6. How to locate trouble in a reversing switch and how to overcome it. 7. How to reverse a car in order to obtain best effects. 8. Points about motors that should be looked after closely. 9. Short circuits. What a short circuit means and how to locate it. 10. Information on incandescent light circuits. 11. Electric motor force, or how armature rotation is obtained. 12. How to increase the speed of a motor by changing two connections. 13. General information on Westinghouse motors. 14. Westinghouse fuse block. 15. Westinghouse lightning arresters. 16. Westinghouse lamp circuit. 17. Information on open circuits and sparking brushes. 18. Some questions you may be called upon to answer. 19. Points of interest to all. 20. Conclusion. 21. Diagram of car.

EXTRACT FROM INTRODUCTION.

"Recognizing the fact that not one motorman in twenty thoroughly understands his motors, I feel that I am giving them great value for their money, and at the same time furnishing them with the means of holding a position on any line they may be employed on. While serving as foreman in different car houses, the author has been able to gain a great many pointers that will come up on the examination of motormen and conductors, and having possessed these, together with my knowledge of electricity, I feel perfectly safe in stating that they cannot ask you any question that I have not honestly and correctly answered in this little book. If you wish to learn the value of this book, go to your electrician, or man in charge of your motors, and ask him for information, and then, and not until then, will you learn the true value of this book. It has always been understood by all electricians or foremen of car houses, that no information of any importance be given to any one outside of their class, and consequently most men running cars to-day are ignorant of their motors."

REWIRED WITH RAVEN WHITE CORE WIRE

—OFFICE—
The Ferris Wheel Co.
1131 The Rookery,
Chicago, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago. Ill.

Gentlemen:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly,
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

A VALUABLE NEW WORK.

ELECTRICIANS' HANDY-BOOK

OF USEFUL INFORMATION.

Edited by A. E. WATSON, A. M., Teacher of Electricity, Brown University, Providence, R. I.
Compiled by E. T. BUBIER, 2d.

ILLUSTRATED.

A Compilation from the works of Sylvanus P. Thompson, Kapp, Allsop, Munroe and Jamieson, Watson, Bottone, Bonney, Watt, Poole, Trevert, Haskins, Morrow and Reid, and others.

This book gives a large number of receipts for making Battery Fluids, Battery Pastes, Insulating Materials and Varnishes, Electro-Plating Solutions, etc. Tells how to make Electric Batteries, Bells, Telephone, Motors, Dynamos, Induction Coils, Influence and Static Machines, etc. Gives formulæ for winding Dynamos, Motors, Armatures, Field Magnets, Transformers. Contains many Rules, Tables, Data, etc. In fact it is almost a complete cyclopædia of Electricity. It is neatly bound and of a convenient size to be carried in the pocket for handy reference.

CONTENTS.

PART		PART	
1.	History.	9.	Electric Lighting.
2.	Theory.	10.	Transformers.
3.	Measurements. (Electric and Magnetic.)	11.	Wiring for Electric Power.
4.	Electric Batteries.	12.	Wiring for Bell Fitting and Gas Lighting
5.	Electro-Chemistry and Metallurgy.	13.	Electric Railways.
6.	The Telegraph and Telephone.	14.	Miscellaneous.
7.	Dynamos and Motors.	15.	Useful Tables.
8.	Management of Dynamos and Motors.	16.	Logarithms.

Contains over four hundred and fifty pages and many illustrations.

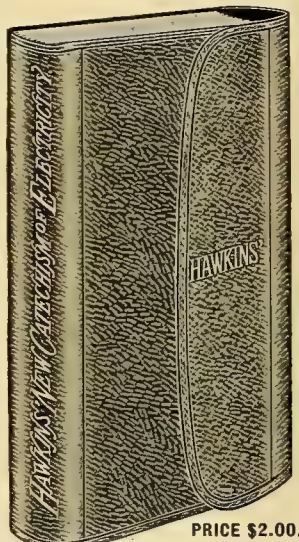
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

THE OMAHA EXPOSITION.

When the World's Fair at Chicago ceased to exist, it was supposed that we should never look upon its like again. However, the Trans-Mississippi Exposition at Omaha has effectively reproduced in similarity all of the buildings which made the White City so attractive in 1893.

It does not now take two weeks to wander through grounds and structures and then be compelled to go away with a jumble of ideas, for the Omaha Exposition people have profited by past experience, and have so improved the arrangement of exhibits that no more than two or three days of time need be consumed in admiration and inspection of the marvelous resources of the West, collected together in the chief city of Nebraska.

Even the new Midway is a reproduction of the far-famed Street of All Nations of 1893, with many improvements upon the original.

The electric lighting of the buildings, grounds and lagoons at night makes a scene of enchanting beauty, alone worth traveling a thousand miles to see.

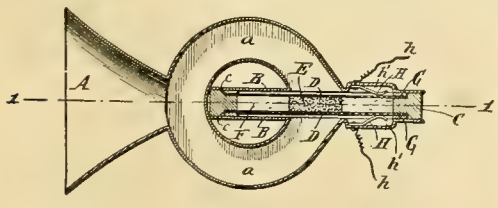
The means of communication between the city and grounds are ample, and the distance to be traversed is short.

The ways of reaching Omaha are innumerable, but chief among them is the direct Chicago and Omaha short line of the Chicago, Milwaukee & St. Paul Railway, with its electric lighted, vestibuled trains, leaving Chicago every night at 6:15 p. m., and arriving Omaha at 8:20 the next morning. Dining car service en route.

Excursion tickets are on sale at every coupon ticket office in the United States over the Chicago, Milwaukee & St. Paul Railway through Northern Illinois and Central Iowa, as well as at 95 Adams street, and at the Union Passenger Station, Canal and Adams streets, Chicago.

THE DOUBLE DIAPHRAGM

of the **Wilhelm Transmitter** secures a double compression of the carbon granules in the pocket between them, greatly increasing the volume, distinctness and carrying value of the voice. Will not "pack" under any circumstance, and cannot be injured by rough handling or pencil jabbing.



Recognized by experts as containing features that place it far ahead of all others.

DOMESTIC

Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

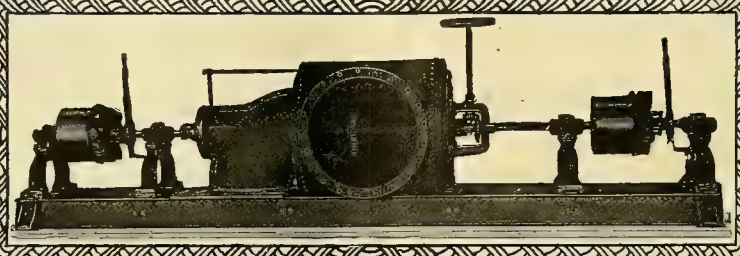
THE NEW AMERICAN TURBINE
SEND FOR CATALOGUE

THE DAYTON GLOBE IRON WORKS CO., DAYTON, O.



SHAFTING, GEARING, PULLEYS, PILLOW BLOCKS, GOVERNORS, ETC.

THE PELTON WATER WHEEL CO.

Gives exclusive attention to the development and utilization of water powers by the most modern, economic and improved methods.

An experience of more than fifteen years, involving both the theory and practice of hydraulic engineering as relates to power development in its widest range of application, is at the service of its customers

NINE THOUSAND WHEELS NOW RUNNING
Aggregating some 700,000 h. p.

ELECTRIC POWER TRANSMISSION

Pelton Wheels afford the most reliable and efficient power for such service, and are running the majority of stations of this character in the United States, as well as most foreign countries.

Highest efficiency and absolute regulation guaranteed under the most extreme variations of load. Catalogues furnished on application.

Address, PELTON WATER WHEEL COMPANY,
143 Liberty St., New York City, U. S. A. or 121 Main St., San Francisco, Cal., U. S. A.

WATER WHEELS

For all Heads from 3 Ft. to 2000 Ft.
Especially adapted to all kinds of
ELECTRIC POWER AND LIGHTING PLANTS.

Recent tests at Holyoke enable us to guarantee:
The Largest Power ever obtained from a wheel of the same diameter. The highest speed ever obtained for the same power. The highest mean efficiency ever realized when running from half to full gate. We guarantee also: *A runner of the greatest possible strength. A gate unequaled in quickness and ease of opening and closing. Tests show over 81 per cent. average efficiency with half to full water.*

State your Head and send for 124 page pamphlet.
JAMES LEFFEL & CO., Springfield, Ohio, U. S. A.

DIXON'S BELT DRESSING
AND LEATHER PRESERVATIVE.
Is guaranteed to prevent slipping and to preserve the leather.
It will pay you to send for circulars and testimonials.
JOS. DIXON CRUCIBLE CO., JERSEY CITY, N. J.

We have issued a NEW catalogue of electrical books containing 100 pages, listing every work on electricity. A copy will be cheerfully mailed on receipt of a two-cent stamp.
ELECTRICIAN PUBLISHING CO.,
510 Marquette Bldg., Chicago.

S.S.R.
(STANDING SEAM ROOFING)

Write for Special Circular.

The best general purpose roofing ever made. Weighs per 100 square feet about 78 lbs., nearly double that of tin, two-thirds less than shingles or gravel, and five-sixths less than slate. Made of the best soft steel. Every sheet rigidly inspected. A cheap roof, covering a large surface.

The Cincinnati Corrugating Co.
Box 533, PIQUA, OHIO.

NEW EDITION.
X-RAYS
FOR EVERYBODY.
By Edward Trevert.
Just off the Press. 93 Pages. 47 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

Important Telephone Books.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a complete treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.
This book describes the construction of the various forms of transmitting and receiving devices, the signaling mechanisms, and the switchboard apparatus at the central station. It is written by two well-known electricians, and has the merit of being the latest work on the subject.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view, it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Sixth edition. 16mo, 50 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Second edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pages. 333 illustrations. Price $4.50.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. The purpose for which this book is written is to furnish information to those who may desire to construct or use telephone apparatus or lines on a small scale. Price $1.00.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp., 168 illustrations. Price $2.00.

TELEPHONE SYSTEMS ON THE CONTINENT OF EUROPE. By Bennett. 436 pages. 169 illustrations. Price $4.50.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pages. 23 illustrations. Price $1.00.

BELL'S ELECTRIC SPEAKING TELEPHONE. Its Invention, Construction, Application, Modification and History. By Prescott. New edition, revised and enlarged. 795 pages. 516 illustrations. Price $4.00.

PHILIPP REIS, INVENTOR OF THE TELEPHONE. A Biographical Sketch with Documentary Testimony. By Thompson. Translation of the original papers of the inventor and contemporary publications. 182 pages. 2 plates and 48 engravings. Price $3.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pages. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Works Published, Sent on Receipt of Price.

The Electrical Transmission of Energy.

A Manual for the Design of Electrical Circuits; by Arthur Vaughan Abbott, C. E., Chief Eng. Chicago Telephone Co.

With 9 Folding Plates. 586 Pages. 289 Illustrations and 74 Tables. Size of page, 6x9 in. Price $4.50.

READ THE TABLE OF CONTENTS:

CHAPTER I.

Introduction.—Distribution in General—Distribution in Series—Distribution in Parallel—Mixed Systems—Indirect Distribution.

CHAPTER II.

The Properties of Wire.—The Conducting Circuit—Wire Manufacture—Hard Drawing—Wire Gauges The Circular Mil—Copper Wire—Properties of Wire—Composite Wire—Galvanizing and Tinning—Insulated Wire—Flexible Cable—Testing and Inspection—Wire Specifications—Tension of Aerial Lines—The Influence of the Variation of Temperature.

CHAPTER III.

The Construction of Aerial Circuits.—*Part I. General Line Work.* Classification—Aerial Lines—Poles—Methods of Preservation—Height of Poles—Cross Arms—Pins—Facing of Arms—Stresses—Calculation for Pole Strength—Guying—Anchor Poles—Setting Poles—Insulators—Value of Insulators—Oil Insulators—Tying and Dead-Ending—Loops—Stringing Wires—Wire Joints—Strength of Joints—The Suspension of Aerial Cables—Humming of Wires—Transposition of Telephone Lines—Power Circuits—Pole Line Specifications. *Part II. Electric Railway Circuits.* Electric Railway Circuits—Railway Return Circuit—Electrolytic Action—Railway Poles—Wooden Poles—Iron Poles—Feed Wire Insulators and Pole Tops—Trolley Insulators—Railway Line Work—Strain Insulators—Anchors—Line Sections—Switches—Line Crossings. *Part III. Lightning Arresters.* Lightning Guards and Strong Current Arresters—High Resistance Arrester—Magnetic Blow-out Arrester—Mechanical Magnet Arrester—Air Expansion Arrester—Non-Arcing Metal Arrester—Discriminating Arresters—Automatic Cut-outs—Cable and Switchboard Protectors—Appendix of Insurance Regulations.

CHAPTER IV.

Construction of Underground Circuits.—*Part I. Conduits.* Classification—Valentine Conduit—Wyckoff Conduit—Paper Conduit—Pipe Conduits—Dorset Conduit—Chenowith Conduit—Terra-cotta Conduits—Crompton System—Brooks System—Johnstone System—Kennedy System—St. James System—Inflexible Systems—Callender Solid System—Cologne Conduit—Zurich Conduit—Manholes—Junction Boxes for Street Railway Feeds—Introduction of Circuits—Pneumatic Rodding—Gas—Electric Railway Conduits—Buda-Pesth Conduit—Blackpool Conduit—Love Conduit—Lenox Avenue Conduit—Metallic Conduits for Alternating Currents. *Part II. Cables and Conduit Conductors.* Conduit Conductors—Armored Cables—The Siemens Cable—The Edison System—The Ferranti Mains—Telegraph Cables—Subaqueous Cables—Power Circuits—Paper Cables—Telephone Cables—British Post Office Cables—The Patterson Cable—Glover Cables—Fowler Waring Cables—Felten-Guilleaume Cable—Beaded Cables—Cable Joints—The Connection of Underground and Aerial Systems—Cable Heads.

CHAPTER V.

Electrical Instruments. — Classification — Instruments for Measurement of Resistance—Wheatstone Bridge—Slide Wire Bridge—Ohm-Meter—Instruments for Measuring Quantity and Pressure—D'Arsonval Galvanometer—Ballistic Galvanometer—Galvanometer Constants—Reduction to Zero and Inferred Zero—Shunts—Weston Instruments—Cardew Voltmeter—Electrostatic Voltmeter—Siemens Dynamometer—Condensers—Wattmeters—Keys—Magnet—Ground Indicators—Boyer Speed Recorder.

CHAPTER VI.

Methods of Electrical Measurement. Quantities to be Measured—Electrical Intensity—Electrical Quantity—Unit of Current—The Watt—Capacity—Resistance—Ohm's Law—Kirchhoff's Laws—Measurement of Resistance by Deflection—By Wheatstone Bridge—By Voltmeter—By Volt and Ammeter—Measurement of Small Resistance—High Resistance—Insulation Resistance—By Loss of Charge—Line Resistance—Ground Resistance—Special Methods for Galvanometer Resistance—For Battery Resistance—Potential Difference—By Condenser—Wheatstone's Method—Lumsden's Method—Measurement of Current Strength—By Ammeter—By Voltmeter—By Differential Galvanometer—By Slide Wire—Measurement of Capacity—Thomson's Method—Gott's Method—Divided Charge Method—Localization of Faults—Blavier's Method—Overlap Method—Loop Test—Murray's and Varley's Methods—Localization of Crosses—Measurement of Inductance—By Condenser and Bridge—With Alternating Current—Mutual Inductance—Measurement on Alternating Currents—Difference of Potential—Current—Power by Two Voltmeters—By Three Ammeters—Measurement on Polyphase Circuits—Electrical Railway Testing—Capacity of Aerial Lines—The Inductance of Aerial Lines—Mutual Inductance on Transmission Lines.

CHAPTER VII.

Continuous Current Conductors. *Part I. Conductors and Insulators.* Conductors—Resistance—Ohm's Law—Specific Resistance—Effect of Temperature—Resistance of Dielectrics—Line Leakage—Distribution of Potential—The Effect of Leakage—Conductance—Distribution of Potential in Branch Circuits. *Part II. The Heating of Conductors.* Joule's Law—Location of Circuits—Bare Wires Freely Suspended—Radiation and Convection—Paneled Wire—Insulated Wire Freely Suspended—Rheostats and Heaters—Cost of Electric Heating—Fuse Wires—Heating of Insulated Cables—Heating of Conduit Cables—Heating of Suspended Cables.

CHAPTER VIII.

Conductors for Alternating Currents. General Considerations—Classification—Skin Effect—Current Density—Inductance—Magnetic Field—Electromotive Force Due to Varying Field—Equation of Energy—Harmonic Motion—Average Values—The Solution of the Energy Equation—Effect of Mutual Inductance—General Energy Equation for Mutually Inductive Circuits—Coefficients of Inductance—Effect of Capacity—Solution of the Energy Equation for Circuits with Capacity—The Energy Equation for Circuits Containing Resistance—Inductance and Capacity—Graphical Methods—Vector Quantities—Composition and Resolution of E. M. F.—Simple Circuits with One Resistance and Inductance in Series—Reactance—Impedance—Resistance Variable—Inductance Variable—Simple Circuits with Several Resistances and Inductances in Series—Simple Circuits with One Resistance and Capacity in Series—Simple Circuits with Several Resistances, Inductances and Capacities in Series—Circuits with Resistance, Inductance and Capacity in Parallel—Method of Equivalent Resistance and Inductance—Circuits Containing Mutual Inductance—Impedance Tables.

CHAPTER IX.

Series Distribution. Origin—Classification—Constant Current Circuits with Generator and Motor at Fixed Distances—Location of Station—Current Density in Main Circuit—Economic Conditions—Design for Heating-Limit—Design for Mechanical Strength—Minimum First Cost of Line—Minimum First Cost of Station—Minimum First Cost of Plant and Cost of Maintenance and Operation—Design for Minimum First Cost of Plant—Design for Best Service—Minimum Cost of Plant for Maximum Income—Calculation of Loads—Regulation—Automatic Cut-outs.

CHAPTER X.

Parallel Distribution.—The Evolution of the Parallel System—Methods of Distribution—The Loop System—The Spiral Loop—The Tree System—The Closet System—Conical Conductors—Anti-Parallel Feeding—Distribution of Potential—Cylindrical Conductors, Parallel Feeding—Cylindrical Conductors, Anti-parallel Feeding—Conical Conductors, Parallel Feeding—Conical Conductors, Anti-parallel Feeding—Three-wire System—Multiple Series System—Five-Wire System—Relative Area Covered by the Multiple Wire Systems—Feeder and Main System—Location of Central Station—Location of the Feeders and Centers of Distribution—Distributing Mains—Calculation of Feeders—Efficiency of Conductors—Methods of Regulation—The Compensator in Electrical Railway Work—Fall of Pressure and Necessary Section for Feeders—Laws of Economy and Feeder Design—General Design for a System in Multiple Arc—Mechanical Methods—Station Loads—Arc Lamps on Constant Potential Circuits—Electric Railway Wiring—Three-wire Railway Systems.

CHAPTER XI.

Miscellaneous Methods and Long Distance Transmission.—Motor Transformers—Compensators—Motor Transformers Running and Feeding in Series—High and Low Potential Distribution from the Same Station—Accumulators—Sub-station Accumulators—Accumulator Distribution—Regulation by Means of Accumulators—Transformers—Economy in Conductors—Isolated Transformers—Efficiency of Distribution by Isolated Transformers—Transformers as Sub-stations—Polyphase Systems—Long-distance Plants—Long-distance Transmission with Continuous Currents—Line Construction for Long-distance Transmission—Relative Amount of Conducting Material for Transmission Systems.

CHAPTER XII.

The Cost of Production and Distribution.—Cost of Conductors—Cost of Conduits—Telephone and Telegraph Lines—Railway Lines—Cost of Power Stations—Cost of Producing Energy—Coal Consumption per Watt-hour—Water Power—The Gas Engine—The Cost of Electrical Energy, as Developed by Wind Power—The Actual Cost of Electrical Energy—Commercial Considerations of Transmission Problems.

Sent, expressage prepaid, on receipt of price, $4.50.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BUILDING, CHICAGO.

Electricity AND Magnetism.

325 Pages. PRICE $2.00. 347 Illustrations.

A series of Thirty-four Practical Lessons covering the Science of Electricity from Its Fundamental Principles to Its Every-Day Applications. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony, of New York; Prof. Brown Ayres, Tulane University; Prof. A. C. Perrine, Leland Stanford University, Cal.; Prof. Geo. D. Shephardson, University of Minnesota, and others.

A Comprehensive Treatise in Simple Language, Free from Algebraic Equations and Easily Understood.

CONTENTS:

CHAPTER I. **The Nature and Properties of Electricity.**—Origin of Electricity; Two Kinds; Laws of Attraction and Repulsion; Positive and Negative Charge; Terms, Conductors, Insulators, Electric Conductivity; Conveying Electricity; The Electroscope; Force Exerted Between Charged Bodies; Unit of Measurement of Quantity of Electricity; Electrometer.

CHAPTER II. **Machines for Generating Electricity by Friction and by Electric Induction.**—Making Machine to Continuously Generate Electricity by Friction; The Electrophorus; Induction Generator; Units of Electric Current and Pressure; Electricity Conveyed by Unit Current Each Second; Negatively and Positively Charged Conductors; Relation of Lightning and Sparks of Electrical Machine.

CHAPTER III. **Electric Batteries or Appliances for Generating Electricity by Chemical Action.**—Action of Batteries; Electric Pressure; Voltaic Electricity; Direction of Current Flow; Production of Continuous Current; Battery Cells in Series; Production of Pressure by Cells: Polarization and Its Avoidance; Leclanche Cell; Open Circuit Cells.

CHAPTER IV. **Electric Batteries or Appliances for Generating Electricity by Chemical Action (Concluded).**—Closed Circuit Cells; Local Action; Law of Electro-chemical Action; Electro-chemical Equivalent; Primary Batteries Compared with Dynamos for Furnishing Current; Uses of Batteries; Difference Between a Primary and Storage Battery; How Storage Batteries are Made; Parallel Connection of Plates in Storage Batteries.

CHAPTER V. **The Nature and Properties of Magnetism, Magnetic Fields.**—Permanent Magnetism: Magnetic Attraction and Repulsion; Poles of Magnet; Magnitude of Force Between Two Magnets; Aging Magnets; Earth's Action on Magnetic Needle; Magnetic Field; Action of Lines of Force.

CHAPTER VI. **The Magnetic Effects of Electric Currents and Magnetic Circuits.**—Effect of Electric Current on Magnetic Needle; Relation Between Direction of Lines of Force and Direction of Current Flow; Determination of Current Direction by Compass; Ampere Turns; Solenoids; Ampere's Theory; Solenoids with Steel or Iron Cores; Residual Magnetism; Electro-Magnets; Magnetic Permeability; Magnetic Reluctance; Magneto Motive Force or Magnetic Pressure.

CHAPTER VII. **Ohm's Law of the Flow of Electricity.**—Pressure; Resistance; Current; Volt; Ohm; Ampere; Mercury Resistances; Conductivity of Copper Compared with Other Metals; Resistance of Circuits Made Up of the Same Parts in Parallel; Joint Resistances; Fall of Voltage Over Resistance; Effect of Temperature on Resistance; Copper Temperature Coefficient.

CHAPTER VIII. **Heating Effects of Electric Currents. Miscellaneous Effects of Electric Currents.**—Foot-pound; Joule; Horse-power; Watt; Kilowatt; Watts per Horse-power; Heating Effects on Bearings of Machinery; Effect of Electricity on Nerves of Animals; Muscular Effect of Strong Currents.

CHAPTER IX. **Galvanometers and Voltameters.**—Differences in Construction for Large and Small Currents; Presence and Direction of Currents Shown by Galvanometer; Strength of Current Indicated; Tangent Galvanometer; Reflecting Galvanometer; Needle Suspension; d'Arsonval Galvanometer; Terms "Dead-Beat," "Calibrate;" Voltameter; Electrolyte, Electrolysis; Electrode; Forms of Voltameters.

CHAPTER X. **Measurement of Electrical Resistance.**—Resistance Measured by Substitution; Resistance Boxes; Use of German Silver; Coils; Wheatstone Bridge; Measuring Resistances with Bridge; Measuring Very High Resistances; Practical Examples.

CHAPTER XI. **Every-day Measurements of Electric Currents and Pressure.**—Three Effects by Which Currents are Directly Measured; Amperemeters; Milliampere; Microampere; Three Classes of Magnetic Amperemeters; Weston Amperemeter; Electro Dynamometers; Hot Wire Instruments; Scales of Amperemeters; Alternating Current Measuring Instruments; Measuring Very Large Currents; Measuring Electric Pressures; Voltmeters; Cardew Voltmeter; Electrometers; Electrostatic Voltmeters; Standard Cells; Measuring Currents by Voltmeter and a Standard Resistance.

CHAPTER XII. **Every-day Measurements of Electric Power, Condensers and the Measurement of their Capacity.**—Wattmeters; Electrodynamometer Used as Wattmeter; Recording Wattmeters; Coulomb Meters; Watt Hour; Ampere Hour; Capacity; Farad; Microfarad; Condenser; Capacity of Condenser; Charging Condenser; Specific Inductive Capacity; Selection of Insulation for Telephone Cables; Capacity of Underground Wires; Comparing Capacities by Ballistic Galvanometer; Practical Capacity Measurements; Leyden Jar.

CHAPTER XIII. **Electrolytic Deposition of Metals.**—Electroplating; Metals Commonly Used in Plating; Salt of a Metal; Nitrate of Silver; Cyanide of Silver and of Potassium; Solution for Silver Plating; Vats; Quality of Electrolytic Deposit; Effect of Too Great or Small Currents; Cleaning Articles to be Plated; Gilding Inside of Silver Articles; Base Metals on Which Nickel is Usually Plated; Solution for Nickel Plating; Electrotyping; Electrotype Molds; Electrotype Finishing; Electrolytic Refining of Copper; Solution Used.

CHAPTER XIV. **The Electric Telegraph.**—Elements of Electric Telegraph; Telegraph Circuits; Telegraphic Signals; Sending and Receiving; Telegraph Lines; Sounder; Relays; Local Circuits; Multiple Telegraphy; Duplex Telegraphy; Diplex Telegraphy; Quadruplex Telegraphy.

CHAPTER XV. **Multiple Telegraphy.**—Differential Relay; Polarized Relay; Pole Changer; Principles of Operation of Diplex, Quadruplex, Bridge Duplex; Artificial Line; Autographic Telegraphy.

CHAPTER XVI. **The Telephone.**—Bell Telephone; Microphone; Blake Transmitter; Exchanges; Switchboard; Long-Distance Transmitter.

CHAPTER XVII. **The Construction of Telegraph and Telephone Lines and Instruments.**—Poles; Cross-Arms; Pins; Joints; Insulators; Insulation; Ground Plates; Underground Cables; Conduits; Fuses; Multiple Switchboards.

CHAPTER XVIII. **Testing Lines for Insulation and Conductivity and the Location of Leaks and Breaks.**—Line Troubles; Grounds; Crosses; Locating Trouble; Earth Currents; Line Conductivity and Insulation; Testing.

CHAPTER XIX. **Principles of Continuous Current Dynamos and Motors.**—Electric Conductor in Magnetic Field; Field Strength; Induced Electric Pressure; Direction of Current; Moving Conductors; Alternating Current; Dynamos; Magnetos; Commutator.

CHAPTER XX. **Principles of Continuous Current Dynamos and Motors, their Construction, Care and Attendance.**—Gramme Armature; Siemens Armature; Armature Current; Laminating Cores; Foucault or Eddy Currents; Hysteresis; Fundamental Principles of Dynamos and Motors; Points of Good Dynamo; Counter Electric Pressure; Types of Field Windings; Series, Shunt and Compound Wound Machines; Multipolar Machines; Regulation; Care and Maintenance.

CHAPTER XXI. **Arc Lighting and Arc Light Machinery.**—The Arc; Arc Lamps; Principles of Operation; Connections; Arc Dynamos; Current and Pressure Required; Making of Arc Carbons; Regulators; Arc Light Switchboards.

CHAPTER XXII. **Incandescent Lighting and Power Transmission, Two, Three and Five Wire Systems of Distribution for Electric Lights and Motors.**—Incandescent Lamp; Filaments; Vaccuum; Material for and Making of Filaments; Advantages of Incandescent Lamps; Incandescent and Motor Circuits; Constant Pressure; Loss of Voltage; Circular Mils; Practical Examples; Weight of Copper Required for Transmission of Power at Different Pressures; Three-Wire System; Motor Starting Resistances.

CHAPTER XXIII. **Construction of Electric Light and Power Circuits, and Their Testing.**—Overhead Electric Light Wires; Weather-Proof Wire; Arc Circuit Wires; "Drawing In" and "Built In" Underground System; Underground Electric Light Cables; Edison Tubing; Feeders; Mains; Inside Wiring; Cleat Work; Moulding Work; Concealed Work; Dangers from Fires; Distribution System.

CHAPTER XXIV. **Testing Electric Light Circuits and the Distribution and Measurement of Light.**—Faults; Soldered Joints; Magneto Bell; Use of Voltmeter to Locate Grounds on Arc Circuits; Ground Detector; General Testing; Photometer; Standard Candles; Illuminating Effect of Lamps; Effect of Opal Globes.

CHAPTER XXV. **Electro-Magnetic Induction.**—Effect of Cutting Lines of Force by an Electric Conductor; Induced Currents; Induction Coils; Cores of Induction Coils; Transformers; Direction of Induced Current; Self Induction; Attraction and Repulsion of Parallel Wires Carrying Currents.

CHAPTER XXVI. **Alternating Currents.**—Alternator; Electrolytic Effect of Pulsating Current; Heating Effect of Alternating Current; Effective Value; Alternating Current; Measurements; Frequency; Period; Apparent Resistance.

CHAPTER XXVII. **Alternating Currents and Alternating Current Machinery (Concluded).**—Power Used in Alternating Circuits; Alternating Currents for Lighting; Making Transformers; Testing Transformers; Building Alternators; Number of Alternations; The Exciter; Running Alternators in Parallel; Synchronous Motors, Two-Phase and Three-Phase Systems; Induction Motors; Squirrel-Cage Armature; Mesh Connection; Star Connection.

CHAPTER XXVIII. **Miscellaneous Applications of Electric Motors.**—Uses of Electric Motors; Motors in Machine Shops; Waste of Power in Factories: Advantages of Removing Shafts and Belts; Estimating Electrical Power Required; Electric Elevators; Electric Launches;.

CHAPTER XXIX. **Electric Railways.**—Richmond Electric Railroad; Trolley Wire; Trolley; Track; Use of Two Motors; Rail Bonds; Heavy Electric Locomotives.

CHAPTER XXX. **Methods of Handling and Controlling Railway Motors and Generators.**—Output Records; Recording Voltmeters; Load of Electric Railway Plant; Application of Storage Batteries to Smooth Road Curve; Methods of Controlling Street Car Motors; Station Instruments; Equalizer.

CHAPTER XXXI. **Model Electric Plants.**—First Central Station; Changes in General Mechanical Construction of Dynamos; Instruments; Multiple Arcing Galvanometers; Use of Double and Single Pole Switches; Operating Dynamos in Parallel; Feeder Connections in Continuous and Alternating Stations; Throwing Dynamo Into Circuit; Cutting Dynamo Out.

CHAPTER XXXII. **Underwriter's Rules, Etc.**—Necessity of Rules; Special Points in Wiring; Insulation of Sockets, Fuses, Fixtures; Annunciator Wire; Office Wire; Leaky Wires.

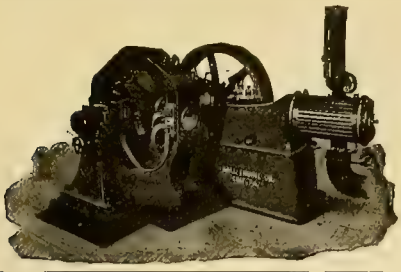
CHAPTER XXXIII. **Electric Welding, Forging, Etc.; Electricity Applied to the Kitchen.**—Electrical Methods Applied to Metal Working; Thomson Apparatus for Heating Metals; Welding by Thomson Method; Bernardos Process of Working Metals; Bringing Piece of Metal to High Temperature by Dipping in Pail of Water; Electric Current for Warming and Cooking; Electric Heating and Stoves Compared.

CHAPTER XXXIV. Electro-Therapeutics; Galvanic Current; Faradic Current; Static Electricity; Electric Osmosis; Electro-Cautery; Medical Electric Lights.

PRICE $2.00. Sent postage prepaid to any address in the world on receipt of price. The Ideal Work for Electricians, Central Station Men, Engineers, Dynamo Tenders, Linemen, Students, Etc.

Electrician Publishing Co.,

510 MARQUETTE BUILDING, CHICAGO.



We build Horizontal and Vertical, Simple and Compound, Medium and High Speed Engines. They embody all modern requirements, and are unequaled for electric lighting. The workmanship and materials are of the highest quality, and the engines excel in economy, simplicity, durability, and regulation.

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 7,000 of the new.

Electrician Publishing Co.,

STREET RAILWAY MEN

—And others engaged in electric railway work will be interested in

THE MOTOR ENGINEERS' AND ELECTRICAL WORKERS' HAND-BOOK.

By WM. LINTERN.

The Motor Engineers' and Electrical Workers' Hand-Book is compiled with a view of furnishing a book of reference in a simple and convenient form for the use of motor engineers and street railway men. The diagrams of controller connections and combinations will be found of great value in practical work. The methods of testing are both simple and reliable. The writer is indebted to the Westinghouse, General Electric, Walker and Steel Motor companies for information cheerfully furnished.

TABLE OF CONTENTS.

Chapter I.—Elementary Principles. Units, Ohm's Law, Watt, Kilowatt, Ampere, Turn, Hour, etc. Potential, E. M. F., Voltage, Drop of Potential, Resistance (Ohmic), Conductivity. **Chapter II.**—Magnetism and Electro-Magnetic Induction. **Chapter III.** Circuits: Varieties of Circuits, Series, Shunt, Parallel or Multiple Arc, Joint Resistances of Parallel Circuits, Multiple Series, Series Multiple. **Chapter IV.** Dynamo Electric Machine. General Principles, Field Windings, (Varieties), Series, Shunt, Compound, etc. Short Shunt, Long Shunt. **Chapter V.**—Instructions for Operating Generators: Running a Single Generator, To Shut Down a Machine Not Run in Multiple, Sparking, Polarity, Excitation Grounds, Generators in Multiple, Connections, Running Generators in Multiple. To Shut Down a Machine Running in Multiple. **Chapter VI.**—The Electric Motor: General Principles, Counter Electromotive Force and Mechanical Power, Efficiency. **Chapter VII.**—Measurements and Tests of Street Railway Motors—Faults, Measurement by Drop of Potential Method (Examples), Insulation Tests, Voltmeter Method, Description of Voltmeter and Ammeter, The Wheatstone Bridge, Instructions for Operating, Drop of Potential in Motor Circuits. **Chapter VIII.**—Instructions for Operating Car Apparatus: Brushes, Sparking at Brushes, Bearings, Bucking, Fuse, Block, Operating Car, Trolley, etc. **Chapter IX.**—The Electric Motor Car in Detail. Series, Parallel, Controller, Reverse Switch, Rheostat, Fuse Box, Lightning Arrester, Heaters. **Chapter X.**—Definitions of Terms. **Chapter XI.**—Diagrams of Car Wiring and Controllers, with Written Descriptions and Diagrams of Combinations: Westinghouse System (G. No. 14, No. 28 and 28 A). General Electric (K, with W. P. Machines, K 2; General Electric Series Parallel Controller with Magnetic Brake). Walker System (B2, E) Steel Motor Co. System. **Chapter XII.**—General Electrical and Mechanical Information. Belting, Shafting, Pulleys and Gears, Melting Point, Specific Gravity and Relative Conductivity, Table Comparing Wire Gauges, Number, Dimensions, Height, Length and Resistance of Pure Copper Wire, Electrical Units and Formulas, Equivalent Carrying Capacity, Proportions of Gear Teeth Notes, Bill of Material for Span Wire Construction (Single Track) (Double Track), Bracket Construction, (Single Track) (Center Pole) (Double Track).

160 pages. Handsomely bound in cloth, $1.00. Heavy boards, 50c. Sent on receipt of price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

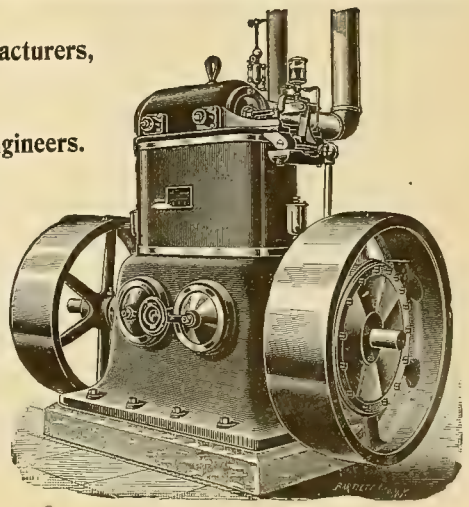
The Westinghouse Machine Company, Manufacturers,

Westinghouse, Church, Kerr & Company, Engineers.

Ten years ago the **Westinghouse Compound Engine** made the world's record for economic duty of **non-condensing engines.**

That record was attested by an engineer of unquestioned ability and standing. **It has been verified** by able experts many times since.

It stands to this day UNTOUCHED.



COMPOUND ENGINE.

THE LATEST BOOK.

"ELECTRIC LIGHTING,"

A PRACTICAL EXPOSITION OF THE ART FOR THE USE OF

Engineers, Students and Others Interested in the Installation or Operation of Electrical Plants.

BY FRANCIS B. CROCKER,

Professor of Electrical Engineering, Columbia University, New York.

Price $3, Prepaid. - Practical and Up-to-Date.

Just the Book you want. 450 Pages, over 150 Illustrations. Read the

TABLE OF CONTENTS:

Chapter I, Introduction; Chapter II, History of Electric Lighting; Chapter III, General Units and Measures; Chapter IV, Classification and Selection of Electric Lighting System; Chapter V, The Location and General Arrangement of Electric Lighting Plants; Chapter VI, Buildings for Electric Lighting Plants; Chapter VII, Possible Sources of Electrical Energy; Chapter VIII, The Steam Engine, History and General Principles; Chapter IX, Steam Boilers for Electric Lighting; Chapter X, Steam Engines for Electric Lighting, General Construction; Chapter XI, Typical Forms of Steam Engine for Electric Lighting; Chapter XII, Steam Engines for Electric Lighting, Selection, Installation and Management; Chapter XIII, Gas, Oil and Hot Air Engines; Chapter XIV, Water Wheels and Windmills; Chapter XV, Mechanical Connections between Engines and Dynamos, Direct Coupling, Belting and Shafting; Chapter XVI, Toothed, Friction and Other Gearing; Chapter XVII, Principles, Construction and Management; Chapter XXI, Applications of Accumulators in Electric Lighting; Chapter XXII, Switchboards, Including Switches, Fuses and Circuit-Breakers; Chapter XXIII, Electrical Measuring Instruments; Chapter XXIV, Lightning Arresters.

Every Engineer and Electrician who desires to thoroughly master the Art of Electric Lighting should have a copy of this book. Sent promptly.

ELECTRICIAN PUBLISHING COMPANY, Suite 510 Marquette Building, CHICAGO.

Iron Roof For Sale.

Width of building, 155 feet out to out, divided into a center span 66 feet with a wing on each side 43 feet 6 inches; total length of the building 350 feet. This building is designed with brick sides and gable walls, with iron roof trusses and iron supporting columns; originally built for an iron foundry, but owing to the failure of the purchaser is now offered for sale at a bargain. Is admirably adapted for a foundry for light or heavy castings, machine shop, car barn, or for any other general manufacturing purposes. We guarantee the iron work as good as new, building never having been used. Apply to

The Berlin Iron Bridge Co.,
EAST BERLIN, CONN.

Power Generators.

Time seems twice as long

When you are waiting for material; the material that comes slow is frequently too late; it's the material that comes "just in time" or before you expect it that's the more valuable.

"Prompt shipments" is no meaningless phrase with us, it's an accomplished reality; we have the goods and we do ship quick.

THE NEW TWENTIETH CENTURY CATALOGUE WILL SOON BE READY FOR DISTRIBUTION.

Central Electric Company,

GEO. A. McKINLOCK, President.

All genuine "ELECTRA" Carbons are put up in packages bearing a label with the TRADE MARK "ELECTRA."

Infringers of my trade-mark will be rigidly prosecuted to protect the interest of purchasers of my carbons.

Notice—The "ELECTRA" Highest Grade Nuernberg Carbons are, as heretofore, manufactured for me by the world-renowned firm of **C. Conradty, of Nuernberg,** who owns both the oldest as well as the **largest carbon works in existence,** and whose carbons are recognized as the standard all the world over.

COLUMBIA CARBONS

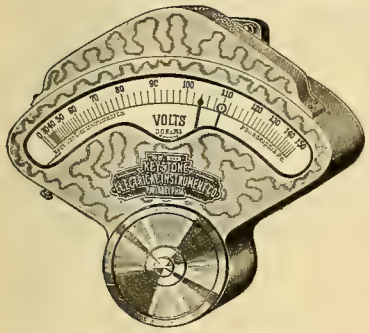
For Enclosed Arcs.

As COLUMBIA is the gem of the ocean, so is the "COLUMBIA" the gem of Enclosed Arc Carbons.

MANUFACTURED BY

THE NATIONAL CARBON CO.

600 HIGHLAND AVENUE, - - - - CLEVELAND, OHIO.



Type "K" Illuminated Dial.

Keystone Electrical Instrument Co.

Switchboard Voltmeters, Ammeters, Ground Detectors and Differential Voltmeters.

We meet all the requirements of modern Central Stations or Isolated Plants, whether using direct or alternating current circuits.

Our instruments are constant and durable, sensitive and accurate, pleasing in appearance and always correct.

We can interest you in prices and other details if you will write to

Ninth Street and Montgomery Avenue, Philadelphia.
New York, 15 Cortlandt Street.
Chicago, 231 South Canal Street.

CHICAGO. NEW YORK.

LONDON, 79 Coleman Street. ANTWERP, 33 Rue Boudewyns. PARIS, 45 Avenue Breteuil.

GARLOCK'S HIGH-GRADE PACKINGS.

They are the IDEAL packings for

STEAM, WATER, GAS, AMMONIA, ETC.

The **standard** for **18 years**, and hold the record for **quality, durability and economy.** Send for samples and new catalogue.

Garlock's Gaskets and Rings. Superior to all others. Our standard grades are the Garlock Gasket, the Economical Gasket, the Achilles Gasket. Engineers and dealers will find it to their interest to correspond with us as to prices, for we guarantee to save you money.

CUT GASKETS For Man-Holes and Hand-Holes.

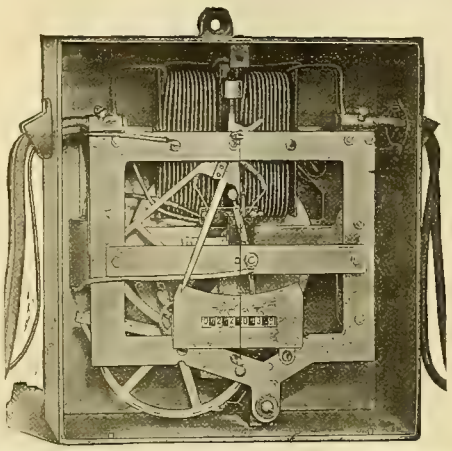
ANNUNCIATORS AND BELLS!

CATALOGUES AND PRICES ON APPLICATION.

PARTRICK, CARTER & WILKINS, 125 South Second St., PHILADELPHIA.

THE AMERICAN ELECTRIC METER CO.

9th St. and Montgomery Ave., Philadelphia, Pa.,



Is now prepared to take orders for immediate delivery of all sizes of 3-Wire Constant Potential Registering Meters.

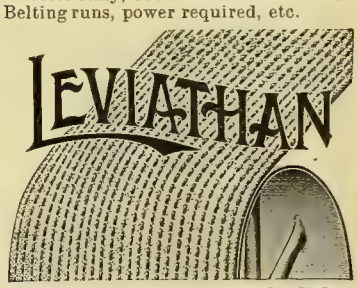
This meter is calibrated ready for instant use.
This meter requires no knowledge of electricity to effect.
This meter shows the load passing every instant.
This meter is hermetically sealed.
This meter measures correctly with uneven loads.
This meter is magnetically shielded and has no permanent magnetism.
This meter can be calibrated with a watch in six minutes.
This meter requires no lubrication.
This meter is direct reading, having no multiplier or dials.
This meter will operate for years without opening.
This meter has no springs, jewels, frictional errors or lag.
This meter once right is always right.

When you are Tired

Of using **"Dynamo"** Belting made from "Shoulder Stock," write us for prices and information on **"Leviathan"** and **"Oak Leaf"** Belting, and our method of "Belting up" **Electric Light** and **Power Plants.**

High grade Belting only. Best Results. Least Cost.

Write fully, conditions under which Belting runs, power required, etc.



MAIN BELTING CO.,

ELECTRICITY AND MAGNETISM.

325 PAGES. PRICE $2.00. 347 ILLUSTRATIONS. A series of Thirty-four Practical Lessons covering the Science of Electricity from Its Fundamental Principles to Its Every-day Applications. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony, of New York; Prof. Brown Ayres, Tulane University; Prof. A. C. Perrine, Leland Stanford University, Cal.; Prof. Geo. D. Shephardson, University of Minnesota, and others. A Comprehensive Treatise in Simple Language, Free from Algebraic Equations and Easily Understood.

CONTENTS:

CHAPTER I: The Nature and Properties of Electricity; Origin of Electricity; Two Kinds; Laws of Attraction and Repulsion; Positive and Negative Charge; Terms, Conductors, Insulators, Electric Conductivity; Conveying Electricity; The Electroscope; Force Exerted Between Charged Bodies; Unit of Measurement of quantity of Electricity; Electrometer.—CHAPTER II: Machines for Generating Electricity by Friction and by Electric Induction; Making Machine to Continuously Generate Electricity by Friction; The Electrophorus; Induction Generator; Units of Electric Current and Pressure; Electricity Conveyed by Unit Current Each Second; Negativeiy and Positively Charged Conductors; Relation of Lightning and Sparks of Electrical Machine.—CHAPTER III: Electric Batteries or Appliances for Generating Electricity by Chemical Action; Action of Batteries; Electric Pressure; Voltaic Electricity; Direction of Current Flow; Production of Continuous Current; Battery Cells In Series; Production of Pressure by Cells; Polarization and Its Avoidance; Leclanche Cell; Open Circuit Cells.—CHAPTER IV: Electric Batteries or Appliances for Generating Electricity by Chemical Action (Concluded); Closed Circuit Cells; Local Action; Law of Electro-chemical Action; Electro-chemical Equivalent; Primary Batteries Compared with Dynamos for Furnishing Current; Uses of Batteries; Difference Between a Primary and Storage Battery; How Storage Batteries are Made; Parallel Connection of Plates in Storage Batteries.—CHAPTER V: The Nature and Properties of Magnetism, Magnetic Fields; Permanent Magnetism; Magnetic Attraction and Repulsion; Poles of Magnet; Magnitude of Force Between Two Magnets; Aging Magnets; Earth's Action on Magnetic Needle; Magnetic Field; Action of Lines of Force.—CHAPTER VI: The Magnetic Effects of Electric Currents and Magnetic Circuits; Effect of Electric Current on Magnetic Needle; Relation Between Direction of Lines of Force and Direction of Current Flow; Determination of Current Direction by Compass; Ampere Turns; Solenoids; Ampere's Theory; Solenoids with Steel or Iron Cores; Residual Magnetism; Electro-Magnets; Magnetic Permeability; Magnetic Reluctance; Magneto Motive Force or Magnetic Pressure.—CHAPTER VII: Ohm's Law of the Flow of Electricity; Pressure; Resistance; Current; Volt; Ohm; Ampere; Mercury Resistance; Conductivity of Copper Compared with Other Metals; Resistance of Circuits Made Up of the Same Parts in Parallel; Joint Resistances; Fall of Voltage Over Resistance; Effect of Temperature on Resistance; Copper Temperature Coefficient.—CHAPTER VIII: Heating Effects of Electric Currents; Miscellaneous Effects of Electric Currents; Foot-pound; Joule; Horse-power; Watt; Kilowatt; Watts per Horse-power; Heating Effects on Bearings of Machinery; Effect of Electricity on Nerves of Animals; Muscular Effect of Strong Currents.—CHAPTER IX: Galvanometers and Voltameters; Differences in Construction for Large and Small Currents; Presence and Direction of Currents Shown by Galvanometer; Strength of Current Indicated; Tangent Galvanometer; Reflecting Galvanometer; Needle Suspension; d'Arsonval Galvanometer; Terms "Dead-Beat," "Calibrate;" Voltameter; Electrolyte, Electrolysis; Electrode; Forms of Voltameters.—CHAPTER X: Measurement of Electrical Resistance; Resistance Measured by Substitution; Resistance Boxes; Use of German Silver; Coils; Wheatstone Bridge; Measuring Resistances with Bridge; Measuring Very High Resistances; Practical Examples.—CHAPTER XI: Every-day Measurements of Electric Currents and Pressure; Three Effects by Which Currents are Directly Measured; Amperemeters; Milliampere; Microampere; Three Classes of Magnetic Amperemeters; Weston Amperemeter; Electro Dynamometers; Hot Wire Instruments; Scales of Amperemeters; Alternating Current Measuring Instruments; Measuring Very Large Currents; Measuring Electric Pressures; Voltmeters; Cardew Voltmeter; Electrometers; Electrostatic Voltmeters; Standard Cells; Measuring Currents by Voltmeter and a Standard Resistance.—CHAPTER XII: Everyday Measurements of Electric Power, Condensers and The Measurement of their Capacity; Wattmeters; Electrodynamometer Used as Wattmeter; Recording Wattmeters; Coulomb Meters; Watt Hour; Ampere Hour; Capacity; Farad; Microfarad; Condenser; Capacity of Condenser; Charging Condenser; Specific Inductive Capacity; Selection of Insulation for Telephone Cables; Capacity of Underground Wires; Comparing Capacities by Ballistic Galvanometer; Practical Capacity Measurements; Leyden Jar.—CHAPTER XIII: Electrolytic Deposition of Metals; Electroplating; Metals Commonly used in Plating; Salt of a Metal; Nitrate of Silver; Cyanide of Silver and of Potassium; Solution for Silver plating; Vats; Quality of Electrolytic Deposit; Effect of Too Great or Small Currents; Cleaning Articles to be Plated; Gilding Inside of Silver Articles; Base Metals on Which Nickel is Usually Plated; Solution for Nickel Plating; Electrotyping; Electrotype Molds; Electrotype Finishing; Electrolytic Refining of Copper; Solution Used.—CHAPTER XIV: The Electric Telegraph; Elements of Electric Telegraph; Telegraph Circuits; Telegraphic Signals; Sending and Receiving; Telegraph Lines; Sounder; Relays; Local Circuits; Multiple Telegraphy; Duplex Telegraphy; Diplex Telegraphy; Quadruplex Telegraphy.—CHAPTER XV: Multiple Telegraphy; Differential Relay; Polarized Relay; Pole Changer; Principles of Operation of Diplex, Quadruplex, Bridge Duplex; Artificial Line; Autographic Telegraphy.—CHAPTER XVI: The Telephone; Bell Telephone; Microphone; Blake Transmitter; Exchanges; Switchboard; Long-Distance Transmitter.—CHAPTER XVII: The Construction of Telegraph and Telephone Lines and Instruments; Poles; Cross-Arms; Pins; Joints; Insulators; Insulation; Ground Plates; Underground Cables; Conduits; Fuses; Multiple Switchboards.—CHAPTER XVIII: Testing Lines for Insulation and Conductivity and the Location of Leaks and Breaks; Line Troubles; Grounds; Crosses; Locating Trouble; Earth Currents; Line Conductivity and Insulation; Testing.—CHAPTER XIX: Principles of Continuous Current Dynamos and Motors; Electric Conductor in Magnetic Field; Field Strength; Induced Electric Pressure; Direction of Current Moving Conductors; Alternating Current; Dynamos; Magnetos; Commutator.—CHAPTER XX: Principles of Continuous Current Dynamos and Motors; their Construction, Care and Attendance; Gramme Armature; Siemens Armature; Armature Current; Laminating Cores; Foucault or Eddy Currents; Hysteresis; Fundamental Principles of Dynamos and Motors; Points of Good Dynamo; Counter Electric Pressure; Types of Field Windings; Series, Shunt and Compound Wound Machines; Multipolar Machines; Regulation, Care and Maintenance.—CHAPTER XXI: Arc Lighting and Arc Light Machinery; The Arc; Arc Lamps; Principles of Operation; Connections; Arc Dynamos; Current and Pressure Required; Making of Arc Carbons; Regulators; Arc Light Switchboards.—CHAPTER XXII: Incandescent Lighting and Power Transmission, Two, Three and Five Wire Systems of Distribution for Electric Lights and Motors; Incandescent Lamp; Filaments; Vaccuum; Material for and Making of Filaments; Advantages of Incandescent Lamps; Incandescent and Motor Circuits; Constant Pressure; Loss of Voltage; Circular Mils; Practical Examples; Weight of Copper Required for Transmission of Power at Different Pressures; Three-Wire System; Motor Starting Resistances.—CHAPTER XXIII: Construction of Electric Light and Power Circuits, and Their Testing; Overhead Electric Light Wires; Weather-Proof Wire; Arc Circuit Wires; "Drawing In" and "Built In" Underground System; Underground Electric Light Cables; Edison Tubing; Feeders; Mains; Inside Wiring; Cleat Work; Moulding Work; Concealed Work; Dangers from Fires; Distribution System;.—CHAPTER XXIV: Testing Electric Light Circuits and the Distribution and Measurement of Light; Faults; Soldered Joints; Magneto Bell; Use of Voltmeter to Locate Grounds on Arc Circuits; Ground Detector; General Testing; Photometer; Standard Candles; Illuminating Effect of Lamps; Effect of Opal Globes.—CHAPTER XXV: Electro-Magnetic Induction; Effect of Cutting Lines of Force by an Electric Conductor; Induced Currents; Induction Coils; Cores of Induction Coils; Transformers; Direction of Induced Current; Self Induction; Attraction and Repulsion of Parallel Wires Carrying Currents.—CHAPTER XXVI: Alternating Currents; Alternator; Electrolytic Effect of Pulsating Current; Heating Effect of Alternating Current; Effective Value; Alternating Current; Measurements; Frequency; Period; Apparent Resistance.—CHAPTER XXVII: Alternating Currents and Alternating Current Machinery (Concluded); Power Used in Alternating Circuits; Alternating Currents for Lighting; Making Transformers; Testing Transformers; Building Alternators; Number of Alternations; The Exciter; Running Alternators in Parallel; Synchronous Motors; Two-Phase and Three-Phase Systems; Induction Motors; Squirrel-Cage Armature; Mesh Connection; Star Connection;.—CHAPTER XXVIII: Miscellaneous Applications of Electric Motors; Uses of Electric Motors; Motors in Machine Shops; Waste of Power in Factories; Advantages of Removing Shafts and Belts; Estimating Electrical Power Required; Electric Elevators; Electric Launches.—CHAPTER XXIX: Electric Railways; Richmond Electric Railroad; Trolley Wire; Trolley; Track; Use of Two Motors; Rail Bonds; Heavy Electric Locomotives.—CHAPTER XXX: Methods of Handling and Controlling Railway Motors and Generators; Output Records; Recording Voltmeters; Load of Electric Railway Plant; Application of Storage Batteries to Smooth Road Curve; Methods of Controlling Street Car Motors; Station Instruments; Equalizer.—CHAPTER XXXI: Model Electric Plant; First Central Station; Changes in General Mechanical Construction of Dynamos; Instruments; Multiple Arcing Galvanometers; Use of Double and Single Pole Switches; Operating Dynamos in Parallel; Feeder Connections in Continuous and Alternating Stations; Throwing Dynamo into Circuit; Cutting Dynamo Out.—CHAPTER XXXII: Underwriter's Rules, Etc.; Necessity of Rules; Special Points in Wiring; Insulation of Sockets, Fuses, Fixtures; Annunciator Wire; Office Wire; Leaky Wires.—CHAPTER XXXIII: Electric Welding, Forging, Etc.; Electricity Applied to the Kitchen; Electrical Methods Applied to Metal Working; Thomson Apparatus for Heating Metals; Welding by Thomson Method; Bernardos Process of Working Metals; Bringing Piece of Metal to High Temperature by Dipping in Pail of Water; Electric Current for Warming and Cooking; Electric Heating and Stoves Compared.—CHAPTER XXXIV: Electro-Therapeutics; Galvanic Current; Faradic Current; Static Electricity; Electric Osmosis; Electro-Cautery; Medical Electric Lights.

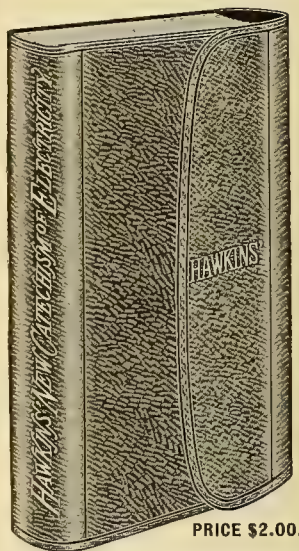
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

THE OMAHA EXPOSITION.

When the World's Fair at Chicago ceased to exist, it was supposed that we should ne'er look upon its like again. However, the Trans-Mississippi Exposition at Omaha has effectively reproduced in similarity all of the buildings which made the White City so attractive in 1893.

It does not now take two weeks to wander through grounds and structures and then be compelled to go away with a jumble of ideas, for the Omaha Exposition people have profited by past experience, and have so improved the arrangement of exhibits that no more than two or three days of time need be consumed in admiration and inspection of the marvelous resources of the West, collected together in the chief city of Nebraska.

Even the new Midway is a reproduction of the far-famed Street of All Nations of 1893, with many improvements upon the original.

The electric lighting of the buildings, grounds and lagoons at night makes a scene of enchanting beauty, alone worth traveling a thousand miles to see.

The means of communication between the city and grounds are ample, and the distance to be traversed is short.

The ways of reaching Omaha are innumerable, but chief among them is the direct Chicago and Omaha short line of the Chicago, Milwaukee & St. Paul Railway, with its electric lighted, vestibuled trains, leaving Chicago every night at 6:15 p. m., and arriving Omaha at 8:20 the next morning. Dining car service en route.

Excursion tickets are on sale at every coupon ticket office in the United States over the Chicago, Milwaukee & St. Paul Railway through Northern Illinois and Central Iowa, as well as at 95 Adams street, and at the Union Passenger Station, Canal and Adams streets, Chicago.

Who Leads in Telephone Wood Specialties?

The Cabinet Manufacturing Company,

STEUBENVILLE, OHIO.

THEY STILL USE IT.

Stover Bicycle Manufacturing Co.

FREEPORT, ILL., March 2nd, 1897.

The Boiler Expurgator Co., Chicago, Ill.

Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time.

Very truly yours,
STOVER BICYCLE MFG. CO.
W. A. Hance, Supt.

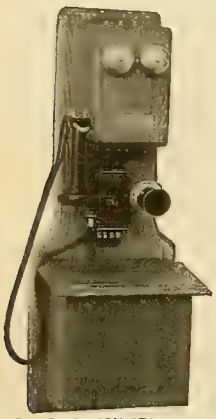
The Victor Apparatus Is Fully Protected by Patents.



Our Style "C" 'Phone.

Our Style "C" 'Phone

is particularly adapted for exchange work. It is equipped with powerful generator, the Victor Double Pole Receiver and solid back transmitter and is unquestionably the finest, most efficient and durable instrument on the market to-day. We guarantee our apparatus.

Our Style "K" 'Phone.

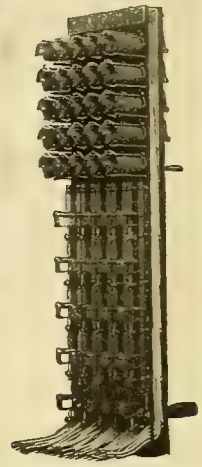
Our Style "K" 'Phone

is especially adapted for long-distance and toll line work. It is provided with powerful generator and ringer, long-distance arm transmitter and double-pole receiver, an instrument of merit and fully equal to any service for which it may be desired. We guarantee our apparatus. We make 'phones of every description.

The Victor Express Switch-board

has no wires running into the back of jacks; all others have from three to six. This board is the most satisfactory ever offered to the telephone public. It is durable and simple, containing no useless trappings or superficial parts. It is durable and simple in construction, easy and rapid to operate and inexpensive to maintain. All parts are interchangeable and accessible without interfering with other parts or interruption of operation. This board is built in sections of five drops and jacks, mounted on hard rubber, invisibly wired and so constructed that when assembled it has the appearance and in fact is one solid front. Each subscriber has an individual ringing key, and the gravity drop used is a special feature owing to its positive action and easy restoration.

Front View Showing 5 Sections Drops and Jacks.



Back View Showing 5 Sections Drops and Jacks.

We make a full line of Telephone Apparatus. Write for any information.

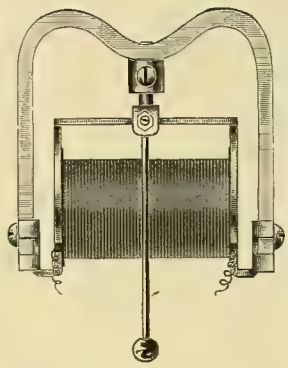
GET CATALOG. **72-82 W. Jackson Blvd., Chicago, U. S. A.**

A PERFECT RINGER.



All of our magneto bells are equipped with **our new single core ringer.** You will undoubtedly find that this form of ringer possesses **many points** of superiority in **many respects** over all forms and types of double core ringers. Here are a few of the reasons:

1st. The magnetic joints in the electro-magnetic circuit are absolutely perfect.

2nd. Perfect symmetry in design means perfect symmetry in action.

3rd. Our ringer has the shortest possible length of magnetic circuit, which circuit encloses only one-half the depth of the winding.

The fact that **one** of our competitors has **brought suit against us** for infringement on their **double-core** ringer is an open acknowledgment that our **single-core** ringer is superior to any and all **double-core** ringers, because they find that we are **cutting into their trade.**

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony

DON'T READ

The WESTERN ELECTRICIAN unless you want to be made fully aware of what is going on in the electrical field. . . . . .

JUST WHAT YOU ARE LOOKING FOR!

A New and Valuable Book

Electric Lighting Plants,

THEIR COST AND OPERATION.

By W. J. Buckley. With numerous illustrations, diagrams, plans, tables, etc. 275 pages. Cloth. Price, $2.00, postage free. This work gives all necessary data for the erection of an electric light plant of any size. The cost of Arc Lighting. The cost of Incandescent Lighting.

READ THE TABLE OF CONTENTS:

Alternating Arc Lamps, Arc Plants, Belting, Boilers, Boiler Settings, Boiler Efficiencies, Books, Building, Cost of Arc Dynamos and Lamps, Cost of Arc Plants Erected, Cost of Alternating Dynamos, Cost of Alternating Plants Erected, Cost of Belts, Cost of Boilers, Cost of Brick Chimneys, Cost of Copper for Alternating Circuit, Cost of Corliss Engines, Cost of Compound Corliss Engines, Cost of Compound High Speed Engines, Cost of Condensers, Cost of Friction Clutch Pulleys, Cost of Heaters, Cost of High Speed Engines, Cost of Incandescent Dynamos, Cost of Idlers, Cost of Injectors, Cost of Meters, Cost of Motors, Cost of Operating Lamps per hour, Cost of Power Generators. Cost of Poles, Cost of Plain Pulleys, Cost of Pillow Blocks, Cost of Pumps, Cost of Shafting, Cost of Shaft Couplings, Cost of Stacks—iron, Cost of Stacks—brick, Cost of Steam, Cost of Transformers, Cost of Wire, Chimneys, Circuit Loss, Contract Blanks, Current Distribution, Circuits—overhead, Circular Mils of Wire, Depreciation, Direct Connected Apparatus, Dynamos, Dynamo Data, Economy of Condensing, Economy of Covering Steam Pipes, Economy of Heater, Efficiency of Engines, Engines, Equivalent of Current in Horse Power, Equivalent Rates of Lighting, Fuel, Horse Power of Belting, Horse Power of Motors, Horse Power of Shafting, Incandescent Arc Lamps, Instruments, Instructions for Employes, Insulation, Labor, Load Chart, Meter Connections, Municipal Ownership, Natural Gas, N.E.L.A. Standard Rules, Oil, Outcome of Practical Management, Pole Line, Pulleys, Rope Transmission, Resistance of Wire, Rules—Fire Underwriters, Report Com. on Data N. E. L. A., Reports of Cities Owning Plant, Reports of Cities Contracting, Stock Room, Shafting, Transformers, Transformer Curves, Wiring Tables—Primary Wiring, Wiring Tables—Secondary Wiring, Wiring Tables, Motor Wiring, Wire, Wire Formula, Water Power, Wood as Fuel. The only book of its kind in the English Language. **Price, $2.00.**

ELECTRICIAN PUBLISHING COMPANY,

Suite 510 Marquette Building, Chicago.

PAPER COVER, PRICE $1.00.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a **New Book**, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding. 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date. The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors. How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to.....$0.50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways. Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers. Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents. 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations.....$3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

Hospitalier, E.—Domestic Electricity for Amateurs, Translated from the French. With additions by C. J. Wharton. With illustrations.....$2.50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations.....$5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition.....$3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated.$0.50
[Vol. 96 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892.....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather.....$1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations.....$2.50

Lockwood, T. D.—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition.....$1.50

Lockwood, T. D.—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1.00

Meadowcroft, W. H.—The A. B. C. of Electricity. 36 Illustrations.....$0.50

Martin, T. C.—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition.....$4.00

Martin, T. C. and Wetzler, J.—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations.....$3.00

Maver, and Davis, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations.....$1.50

McClure, J. B.—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc..$1.00

Niaudet, Alfred.—Elementary Treatise on Electric Batteries, Translated from the French by L. M. Fishback. Illustrated.....$2.50

Noll, Augustus.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

Pope, Franklin Leonard.—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged.....$1.50

Prindle, H. B.—A Popular Treatise on the Electric Railway of to-day. Fully illustrated.....$0.25

Russell, Stuart A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

Salomons, Sir David.—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand-book. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893.....$1.50

Sloane, T. O'Conner.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated.....$1.00

Sloane, T. O'Connor.—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations.$3.00

Sloane, T. O'Connor.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys.....$1.00

Sloane, T. O'Connor.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

Tesla, Nikola.—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author. Illustrated.....$1.00

Tesla, Nikola.—Lectures on the Electro-Magnet. Illustrated.....$1.00

Thurston, Prof. R. H.—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates.....$1.50

Thomson, Prof. Elihu.—What is Electricity? Illustrated.$0.25

Thompson, Sylvanus P.—Dynamo-Electric Machinery. A Series of Lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66).....$0.50

Thompson, Sylvanus P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of.....$3.50

Thompson, Sylvanus P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75).....$0.50

Thompson, Sylvanus P.—Dynamo-Electric Machinery. Fourth edition, revised and rewritten. Numerous illustrations and 29 plates. 1,000 pages.....$6.00

Trevert.—How to Make Electric Batteries at Home. Illustrated.....$0.25

Urquhart.—Electro-Plating. A Practical Hand-book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions.....$2.00

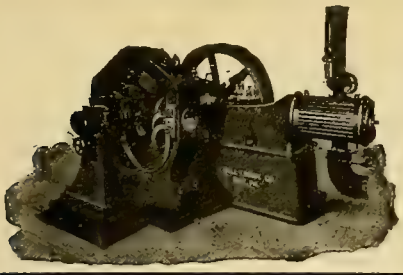
Walker, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98).$0.50

Webb, H. L.—A practical Guide to the Testing of Insulated Wires and Cables. Illustrated.....$1.00

Webb, Herbert Laws.—Telephone Hand-book, Illustrated. 12mo, cloth. Chicago, 1895.....$1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

ELECTRICIAN PUBLISHING CO.,

.....Suite 510 Marquette Building, Chicago.....



We build Horizontal and Vertical, Simple and Compound, Medium and High Speed Engines. They embody all modern requirements, and are unequaled for electric lighting. The workmanship and materials are of the highest quality, and the engines excel in economy, simplicity, durability, and regulation.

THE BALL ENGINE CO.,

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 7,000 of the new.

Electrician Publishing Co.,
510 Marquette Building, CHICAGO.

Manila Rope Power Transmissions

Designed and erected to suit existing conditions and available space, employing "Link-Belt" Sheaves, with

Patent Machine Moulded Grooves

insuring absolute uniformity, and presenting the highest mechanical development in Rope Drive operation. Also manufacturers of

Shafting, Shaft Bearings, Pulleys, Gearing, Friction Clutches, Etc.

Parties contemplating enlarging their plants will do well to secure our prices.

NEW EDITION.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 93 Pages. 47 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

STREET RAILWAY MEN

—And others engaged in electric railway work will be interested in

THE MOTOR ENGINEERS' AND ELECTRICAL WORKERS' HAND-BOOK.

By WM. LIVTERN.

The Motor Engineers' and Electrical Workers' Hand-Book is compiled with a view of furnishing a book of reference in a simple and convenient form for the use of motor engineers and street railway men. The diagrams of controller connections and combinations will be found of great value in practical work. The methods of testing are both simple and reliable. The writer is indebted to the Westinghouse, General Electric, Walker and Steel Motor companies for information cheerfully furnished.

TABLE OF CONTENTS.

Chapter I.—Elementary Principles. Units, Ohm's Law, Watt, Kilowatt, Ampere, Turn, Hour, etc. Potential, E. M. F., Voltage, Drop of Potential, Resistance (Ohmic), Conductivity. **Chapter II.**—Magnetism and Electro-Magnetic Induction. **Chapter III.**—Circuits: Varieties of Circuits, Series, Shunt, Parallel or Multiple Arc, Joint Resistances of Parallel Circuits, Multiple Series, Series Multiple. **Chapter IV.** Dynamo Electric Machine. General Principles, Field Windings, (Varieties), Series, Shunt, Compound, etc. Short Shunt, Long Shunt. **Chapter V.**—Instructions for Operating Generators: Running a Single Generator, To Shut Down a Machine Not Run in Multiple, Sparking, Polarity, Excitation Grounds, Generators in Multiple, Connections. Running Generators in Multiple. To Shut Down a Machine Running in Multiple. **Chapter VI.**—The Electric Motor: General Principles, Counter Electromotive Force and Mechanical Power, Efficiency. **Chapter VII.**—Measurements and Tests of Street Railway Motors—Faults, Measurement by Drop of Potential Method (Examples), Insulation Tests, Voltmeter Method, Description of Voltmeter and Ammeter, The Wheatstone Bridge, Instructions for Operating, Drop of Potential in Motor Circuits. **Chapter VIII.**—Instructions for Operating Car Apparatus: Brushes, Sparking at Brushes, Bearings, Bucking, Fuse, Block, Operating Car, Trolley, etc. **Chapter IX.**—The Electric Motor Car in Detail. Series, Parallel, Controller, Reverse Switch, Rheostat, Fuse Box, Lightning Arrester, Heaters. **Chapter X.**—Definitions of Terms. **Chapter XI.**—Diagrams of Car Wiring and Controllers, with Written Descriptions and Diagrams of Combinations: Westinghouse System (G. No. 14, No. 28 and 28 A). General Electric (K, with W. P. Machines, K 2; General Electric Series Parallel Controller with Magnetic Brake). Walker System (B2, E) Steel Motor Co. System. **Chapter XII.**—General Electrical and Mechanical Information. Belting, Shafting, Pulleys and Gears, Melting Point, Specific Gravity and Relative Conductivity, Table Comparing Wire Gauges, Number, Dimensions, Height, Length and Resistance of Pure Copper Wire, Electrical Units and Formulas, Equivalent Carrying Capacity, Proportions of Gear Teeth Notes, Bill of Material for Span Wire Construction (Single Track) (Double Track), Bracket Construction, (Single Track) (Center Pole) (Double Track).

160 pages. Handsomely bound in cloth, $1.00. Heavy boards, 50c. Sent on receipt of price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

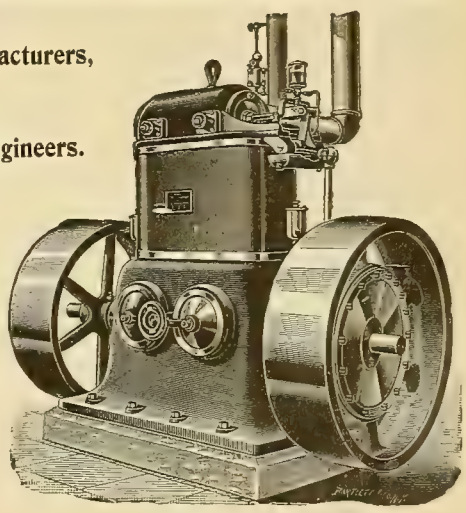
The Westinghouse Machine Company, Manufacturers,

Westinghouse, Church, Kerr & Company, Engineers.

Ten years ago the **Westinghouse Compound Engine** made the world's record for economic duty of **non-condensing engines.**

That record was attested by an engineer of unquestioned ability and standing. **It has been verified** by able experts many times since.

It stands to this day UNTOUCHED.



COMPOUND ENGINE.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X; Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

NOW IS THE TIME TO PROTECT YOUR APPARATUS FROM LIGHTNING, AND

The "S. K. C." Alternating Current Lightning Arrester

AFFORDS RELIABLE AND DURABLE PROTECTION.

In it the defects of the principal lightning arresters on the market are overcome. The E. M. F. required for discharges is less than is dangerous to the insulation of the system. The insulation of the arrester itself is very high. Liability to short circuits is avoided. Arc is quickly broken without excessive flow of dynamo current. Construction is strong and durable, and formation of arcs through accumulation of dirt, dust, bugs, etc., is impossible. Our choke coils add no self induction to the lines so far as dynamo current is concerned.

Correspondence solicited.

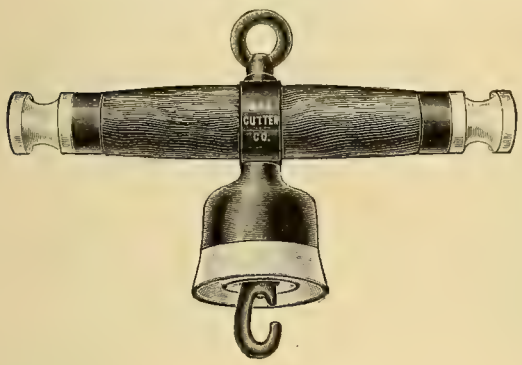
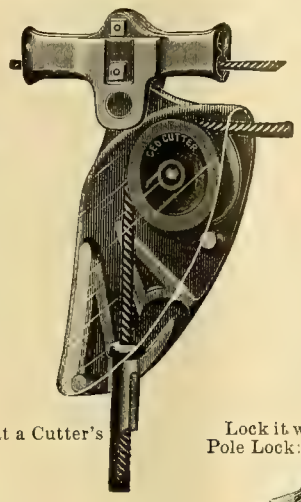
Got any Outdoor Arc Lamps to put up?

Then insulate each with a Cutter's High Voltage Cross-Arm:



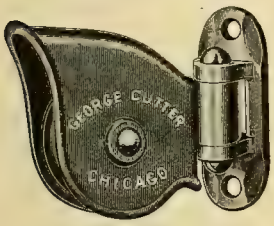
Hang each from a Cutter's Lamp-Supporting Pulley:



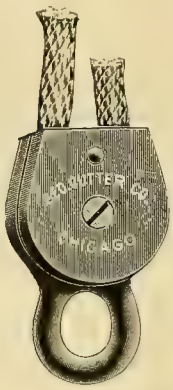
Put a Cutter's Wire Rope Insulator into the Hoisting Rope:

Fasten each end of the suspension wire to a Cutter's Insulated Suspension Bolt:

Guide the rope over a Cutter's Swivel Pole Pulley:

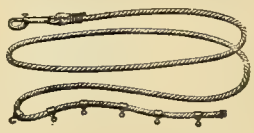


End the rope at a Cutter's Rope Clamp:

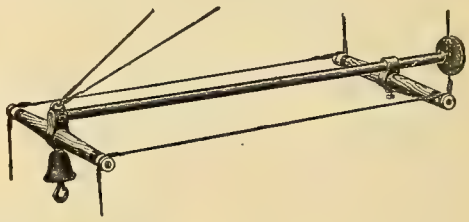


Lock it with a Cutter's Pole Lock:

And let your trimmer carry a Cutter's Snap Rope:

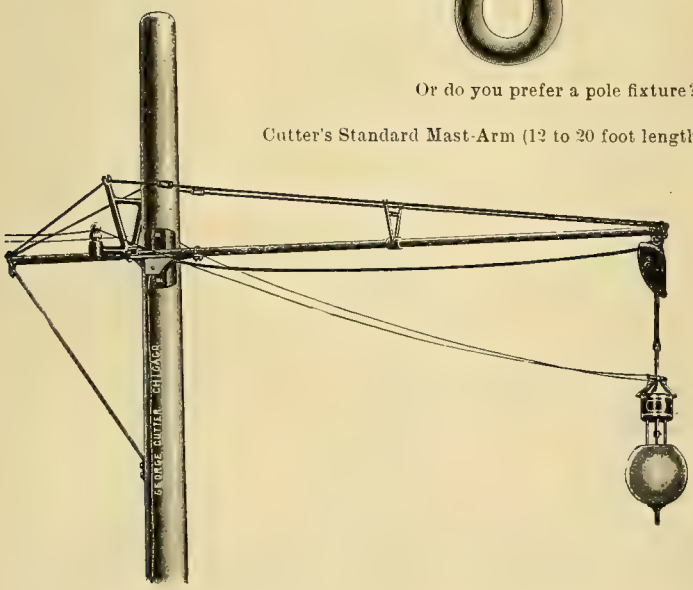


Or are the lamps to go in front of stores? Then order Cutter's Outriggers:



Or do you prefer a pole fixture? Then look at these practical beauties:

Cutter's Standard Mast-Arm (12 to 20 foot lengths);



Cutter's Swinging Arc Fixture (5 foot);

Or send for a cut of Cutter's Pole Arc Fixture (2 foot.)

NOTICE.

TO THOSE INTERESTED IN ELECTRIC LIGHTING.

If you haven't read Buckley's "ELECTRIC LIGHTING PLANTS; THEIR COST AND OPERATION," you should order a copy at once. It is the only work of its kind in print and will prove an inseparable companion. It is just the book thousands of men have been waiting for; it will be what you want. 275 pages. Illustrated. Cloth, $2.00. Paper cover, $1.00. Postage free.

Electricity AND Magnetism.

325 Pages. PRICE $2.00. 347 Illustrations.

A series of Thirty-four Practical Lessons covering the Science of Electricity from Its Fundamental Principles to Its Every-Day Applications. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony, of New York; Prof. Brown Ayres, Tulane University; Prof. A. C. Perrine, Leland Stanford University, Cal.; Prof. Geo. D. Shephardson, University of Minnesota, and others.

A Comprehensive Treatise in Simple Language, Free from Algebraic Equations and Easily Understood.

CONTENTS:

CHAPTER I. **The Nature and Properties of Electricity.**—Origin of Electricity; Two Kinds; Laws of Attraction and Repulsion; Positive and Negative Charge; Terms, Conductors, Insulators, Electric Conductivity; Conveying Electricity; The Electroscope; Force Exerted Between Charged Bodies; Unit of Measurement of Quantity of Electricity; Electrometer.

CHAPTER II. **Machines for Generating Electricity by Friction and by Electric Induction.**—Making Machine to Continuously Generate Electricity by Friction; The Electrophorus; Induction Generator; Units of Electric Current and Pressure; Electricity Conveyed by Unit Current Each Second; Negatively and Positively Charged Conductors; Relation of Lightning and Sparks of Electrical Machine.

CHAPTER III. **Electric Batteries or Appliances for Generating Electricity by Chemical Action.**—Action of Batteries; Electric Pressure; Voltaic Electricity; Direction of Current Flow; Production of Continuous Current; Battery Cells in Series; Production of Pressure by Cells: Polarization and Its Avoidance; Leclanche Cell; Open Circuit Cells.

CHAPTER IV. **Electric Batteries or Appliances for Generating Electricity by Chemical Action (Concluded).**—Closed Circuit Cells; Local Action; Law of Electro-chemical Action; Electro-chemical Equivalent; Primary Batteries Compared with Dynamos for Furnishing Current; Uses of Batteries; Difference Between a Primary and Storage Battery; How Storage Batteries are Made; Parallel Connection of Plates in Storage Batteries.

CHAPTER V. **The Nature and Properties of Magnetism, Magnetic Fields.**—Permanent Magnetism; Magnetic Attraction and Repulsion; Poles of Magnet; Magnitude of Force Between Two Magnets; Aging Magnets; Earth's Action on Magnetic Needle; Magnetic Field; Action of Lines of Force.

CHAPTER VI. **The Magnetic Effects of Electric Currents and Magnetic Circuits.**—Effect of Electric Current on Magnetic Needle; Relation Between Direction of Lines of Force and Direction of Current Flow; Determination of Current Direction by Compass; Ampere Turns; Solenoids; Ampere's Theory; Solenoids with Steel or Iron Cores; Residual Magnetism; Electro-Magnets; Magnetic Permeability; Magnetic Reluctance; Magneto Motive Force or Magnetic Pressure.

CHAPTER VII. **Ohm's Law of the Flow of Electricity.**—Pressure; Resistance; Current; Volt; Ohm; Ampere; Mercury Resistances; Conductivity of Copper Compared with Other Metals; Resistance of Circuits Made Up of the Same Parts in Parallel; Joint Resistances; Fall of Voltage Over Resistance; Effect of Temperature on Resistance; Copper Temperature Coefficient.

CHAPTER VIII. **Heating Effects of Electric Currents. Miscellaneous Effects of Electric Currents.**—Foot-pound; Joule; Horse-power; Watt; Kilowatt; Watts per Horse-power; Heating Effects on Bearings of Machinery; Effect of Electricity on Nerves of Animals; Muscular Effect of Strong Currents.

CHAPTER IX. **Galvanometers and Voltameters.**—Differences in Construction for Large and Small Currents; Presence and Direction of Currents Shown by Galvanometer; Strength of Current Indicated; Tangent Galvanometer; Reflecting Galvanometer; Needle Suspension; d'Arsonval Galvanometer; Terms "Dead-Beat," "Calibrate;" Voltameter; Electrolyte, Electrolysis; Electrode; Forms of Voltameters.

CHAPTER X. **Measurement of Electrical Resistance.**—Resistance Measured by Substitution; Resistance Boxes; Use of German Silver; Coils; Wheatstone Bridge; Measuring Resistances with Bridge; Measuring Very High Resistances; Practical Examples.

CHAPTER XI. **Every-day Measurements of Electric Currents and Pressure.**—Three Effects by Which Currents are Directly Measured; Amperemeters; Milliampere; Microampere; Three Classes of Magnetic Amperemeters; Weston Amperemeter; Electro Dynamometers; Hot Wire Instruments; Scales of Amperemeters; Alternating Current Measuring Instruments; Measuring Very Large Currents; Measuring Electric Pressures; Voltmeters; Cardew Voltmeter; Electrometers; Electrostatic Voltmeters; Standard Cells; Measuring Currents by Voltmeter and a Standard Resistance.

CHAPTER XII. **Every-day Measurements of Electric Power, Condensers and the Measurement of their Capacity.**—Wattmeters; Electrodynamometer Used as Wattmeter; Recording Wattmeters; Coulomb Meters; Watt Hour; Ampere Hour; Capacity; Farad; Microfarad; Condenser; Capacity of Condenser; Charging Condenser; Specific Inductive Capacity; Selection of Insulation for Telephone Cables; Capacity of Underground Wires; Comparing Capacities by Ballistic Galvanometer; Practical Capacity Measurements; Leyden Jar.

CHAPTER XIII. **Electrolytic Deposition of Metals.**—Electroplating; Metals Commonly Used in Plating; Salt of a Metal; Nitrate of Silver; Cyanide of Silver and of Potassium; Solution for Silver Plating; Vats; Quality of Electrolytic Deposit; Effect of Too Great or Small Currents; Cleaning Articles to be Plated; Gilding Inside of Silver Articles; Base Metals on Which Nickel is Usually Plated; Solution for Nickel Plating; Electrotyping; Electrotype Molds; Electrotype Finishing; Electrolytic Refining of Copper; Solution Used.

CHAPTER XIV. **The Electric Telegraph.**—Elements of Electric Telegraph; Telegraph Circuits; Telegraphic Signals; Sending and Receiving; Telegraph Lines; Sounder; Relays; Local Circuits; Multiple Telegraphy; Duplex Telegraphy; Diplex Telegraphy; Quadruplex Telegraphy.

CHAPTER XV. **Multiple Telegraphy.**—Differential Relay; Polarized Relay; Pole Changer; Principles of Operation of Diplex, Quadruplex, Bridge Duplex; Artificial Line; Autographic Telegraphy.

CHAPTER XVI. **The Telephone.**—Bell Telephone; Microphone; Blake Transmitter; Exchanges; Switchboard; Long-Distance Transmitter.

CHAPTER XVII. **The Construction of Telegraph and Telephone Lines and Instruments.**—Poles; Cross-Arms; Pins; Joints; Insulators; Insulation; Ground Plates; Underground Cables; Conduits; Fuses; Multiple Switchboards.

CHAPTER XVIII. **Testing Lines for Insulation and Conductivity and the Location of Leaks and Breaks.**—Line Troubles; Grounds; Crosses; Locating Trouble; Earth Currents; Line Conductivity and Insulation; Testing.

CHAPTER XIX. **Principles of Continuous Current Dynamos and Motors.**—Electric Conductor in Magnetic Field; Field Strength; Induced Electric Pressure; Direction of Current; Moving Conductors; Alternating Current; Dynamos; Magnetos; Commutator.

CHAPTER XX. **Principles of Continuous Current Dynamos and Motors, their Construction, Care and Attendance.**—Gramme Armature; Siemens Armature; Armature Current; Laminating Cores; Foucault or Eddy Currents; Hysteresis; Fundamental Principles of Dynamos and Motors; Points of Good Dynamo; Counter Electric Pressure; Types of Field Windings; Series, Shunt and Compound Wound Machines; Multipolar Machines; Regulation; Care and Maintenance.

CHAPTER XXI. **Arc Lighting and Arc Light Machinery.**—The Arc; Arc Lamps; Principles of Operation; Connections; Arc Dynamos; Current and Pressure Required; Making of Arc Carbons; Regulators; Arc Light Switchboards.

CHAPTER XXII. **Incandescent Lighting and Power Transmission, Two, Three and Five Wire Systems of Distribution for Electric Lights and Motors.**—Incandescent Lamp; Filaments; Vaccuum; Material for and Making of Filaments; Advantages of Incandescent Lamps; Incandescent and Motor Circuits; Constant Pressure; Loss of Voltage; Circular Mils; Practical Examples; Weight of Copper Required for Transmission of Power at Different Pressures; Three-Wire System; Motor Starting Resistances.

CHAPTER XXIII. **Construction of Electric Light and Power Circuits, and Their Testing.**—Overhead Electric Light Wires; Weather-Proof Wire; Arc Circuit Wires; "Drawing In" and "Built In" Underground System; Underground Electric Light Cables; Edison Tubing; Feeders; Mains; Inside Wiring; Cleat Work; Moulding Work; Concealed Work; Dangers from Fires; Distribution System.

CHAPTER XXIV. **Testing Electric Light Circuits and the Distribution and Measurement of Light.**—Faults; Soldered Joints; Magneto Bell; Use of Voltmeter to Locate Grounds on Arc Circuits; Ground Detector; General Testing; Photometer; Standard Candles; Illuminating Effect of Lamps; Effect of Opal Globes.

CHAPTER XXV. **Electro-Magnetic Induction.**—Effect of Cutting Lines of Force by an Electric Conductor; Induced Currents; Induction Coils; Cores of Induction Coils; Transformers; Direction of Induced Current; Self Induction; Attraction and Repulsion of Parallel Wires Carrying Currents.

CHAPTER XXVI. **Alternating Currents.**—Alternator; Electrolytic Effect of Pulsating Current; Heating Effect of Alternating Current; Effective Value; Alternating Current; Measurements; Frequency; Period; Apparent Resistance.

CHAPTER XXVII. **Alternating Currents and Alternating Current Machinery (Concluded).**—Power Used in Alternating Circuits; Alternating Currents for Lighting; Making Transformers; Testing Transformers; Building Alternators; Number of Alternations; The Exciter; Running Alternators in Parallel; Synchronous Motors, Two-Phase and Three-Phase Systems; Induction Motors; Squirrel-Cage Armature; Mesh Connection; Star Connection.

CHAPTER XXVIII. **Miscellaneous Applications of Electric Motors.**—Uses of Electric Motors; Motors in Machine Shops; Waste of Power in Factories; Advantages of Removing Shafts and Belts; Estimating Electrical Power Required; Electric Elevators; Electric Launches;.

CHAPTER XXIX. **Electric Railways.**—Richmond Electric Railroad; Trolley Wire; Trolley; Track; Use of Two Motors; Rail Bonds; Heavy Electric Locomotives.

CHAPTER XXX. **Methods of Handling and Controlling Railway Motors and Generators.**—Output Records; Recording Voltmeters; Load of Electric Railway Plant; Application of Storage Batteries to Smooth Road Curve; Methods of Controlling Street Car Motors; Station Instruments; Equalizer.

CHAPTER XXXI. **Model Electric Plants.**—First Central Station; Changes in General Mechanical Construction of Dynamos; Instruments; Multiple Arcing Galvanometers; Use of Double and Single Pole Switches; Operating Dynamos in Parallel; Feeder Connections in Continuous and Alternating Stations; Throwing Dynamo Into Circuit; Cutting Dynamo Out.

CHAPTER XXXII. **Underwriter's Rules, Etc.**—Necessity of Rules; Special Points in Wiring; Insulation of Sockets, Fuses, Fixtures; Annunciator Wire; Office Wire; Leaky Wires.

CHAPTER XXXIII. **Electric Welding, Forging, Etc.; Electricity Applied to the Kitchen.**—Electrical Methods Applied to Metal Working; Thomson Apparatus for Heating Metals; Welding by Thomson Method; Bernardos Process of Working Metals; Bringing Piece of Metal to High Temperature by Dipping in Pail of Water; Electric Current for Warming and Cooking; Electric Heating and Stoves Compared.

CHAPTER XXXIV. Electro-Therapeutics; Galvanic Current; Faradic Current; Static Electricity; Electric Osmosis; Electro-Cautery; Medical Electric Lights.

PRICE $2.00. Sent postage prepaid to any address in the world on receipt of price. The Ideal Work for Electricians, Central Station Men, Engineers, Dynamo Tenders, Linemen, Students, Etc.

TELEPHONE SPECIALTY No. 6364.

SELF-CONTAINED AUTOMATIC HOOK.

It can be placed in a smaller space than any hook on the market. It is easy to install, as it is only necessary to cut a slot in the side of the box and screw it on. All of the contacts are on and adjusted before leaving the factory. It will stand hard usage and will always make proper connections when receiver is returned.

It has wiping contacts of one-quarter inch.

This is only one of our many valuable Telephone specialties.

ELECTRIC APPLIANCE COMPANY,

ELECTRICAL SUPPLIES, 242 MADISON ST., CHICAGO.

We have issued a NEW catalogue of electrical books containing 100 pages, listing every work on electricity. A copy will be cheerfully mailed on receipt of a two-cent stamp.

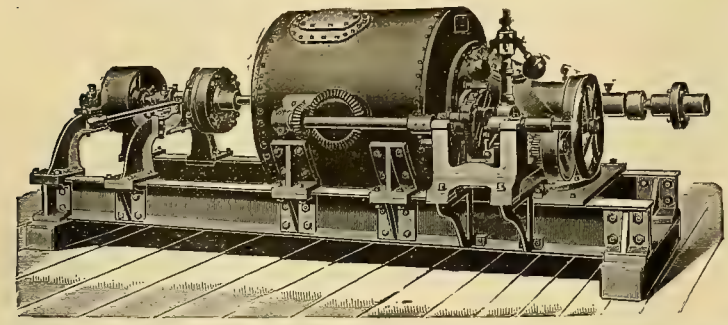
Victor Turbine Water Wheel.



Cylinder or Register Gate Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter,** being **double the power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

SEND FOR CATALOGUE AND PARTICULARS.

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 38 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts and where the situation admits of their use we recommend them.

PERHAPS YOU HAVE HEARD

Of a railway system running between Chicago, Milwaukee, St. Paul, Minneapolis, Ashland and Duluth, known as the Wisconsin Central Lines. Before making a journey to any of these northwestern points, inquire relative to the fast and elegantly equipped trains which leave Chicago daily via the Wisconsin Central. Your nearest ticket agent can give you complete information.

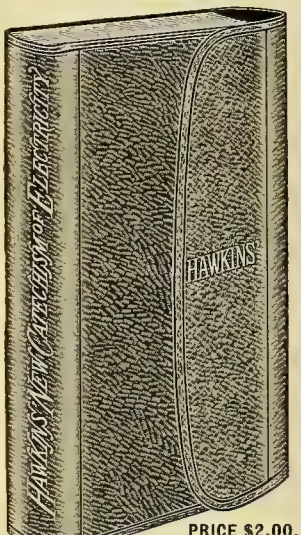
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

THE OMAHA EXPOSITION.

When the World's Fair at Chicago ceased to exist, it was supposed that we should never look upon its like again. However, the Trans-Mississippi Exposition at Omaha has effectively reproduced in similarity all of the buildings which made the White City so attractive in 1893.

It does not now take two weeks to wander through grounds and structures and then be compelled to go away with a jumble of ideas, for the Omaha Exposition people have profited by past experience, and have so improved the arrangement of exhibits that no more than two or three days of time need be consumed in admiration and inspection of the marvelous resources of the West, collected together in the chief city of Nebraska.

Even the new Midway is a reproduction of the far-famed Street of All Nations of 1893, with many improvements upon the original.

The electric lighting of the buildings, grounds and lagoons at night makes a scene of enchanting beauty, alone worth traveling a thousand miles to see.

The means of communication between the city and grounds are ample, and the distance to be traversed is short.

The ways of reaching Omaha are innumerable, but chief among them is the direct Chicago and Omaha short line of the Chicago, Milwaukee & St. Paul Railway, with its electric lighted, vestibuled trains, leaving Chicago every night at 6:15 p. m., and arriving Omaha at 8:20 the next morning. Dining car service en route.

Excursion tickets are on sale at every coupon ticket office in the United States over the Chicago, Milwaukee & St. Paul Railway through Northern Illinois and Central Iowa, as well as at 95 Adams street, and at the Union Passenger Station, Canal and Adams streets, Chicago.

A GOOD BOOK!!

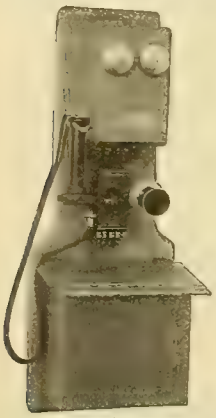
ELECTRIC TRANSMISSION HAND-BOOK.

Lieut. F. B. Badt's latest addition to our famous hand-book series, of which 45,000 copies have been sold. The new book deals in the author's well-known practical style with all the problems of Electric Power Transmission.

NOW READY. **PRICE $1.00.**

Electrician Publishing Company, 510 Marquette Building, Chicago.

The Victor Apparatus Is Fully Protected by Patents.



Our Style "C" 'Phone.

Our Style "C" 'Phone

is particularly adapted for exchange work. It is equipped with powerful generator, the Victor Double Pole Receiver and solid back transmitter and is unquestionably the finest, most efficient and durable instrument on the market to-day. We guarantee our apparatus.

Our Style "K" 'Phone.

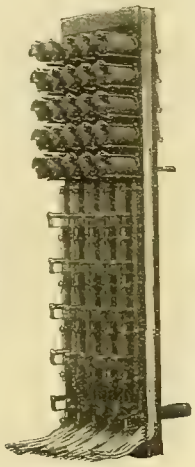
Our Style "K" 'Phone

is especially adapted for long-distance and toll line work. It is provided with powerful generator and ringer, long-distance arm transmitter and double-pole receiver, an instrument of merit and fully equal to any service for which it may be desired. We guarantee our apparatus. We make 'phones of every description.

The Victor Express Switch-board

has no wires running into the back of jacks; all others have from three to six. This board is the most satisfactory ever offered to the telephone public. It is durable and simple, containing no useless trappings or superficial parts. It is durable and simple in construction, easy and rapid to operate and inexpensive to maintain. All parts are interchangeable and accessible without interfering with other parts or interruption of operation. This board is built in sections of five drops and jacks, mounted on hard rubber, invisibly wired and so constructed that when assembled it has the appearance and in fact is one solid front. Each subscriber has an individual ringing key, and the gravity drop used is a special feature owing to its positive action and easy restoration.

Front View Showing 5 Sections Drops and Jacks.



Back View Showing 5 Sections Drops and Jacks.

We make a full line of Telephone Apparatus. Write for any information.

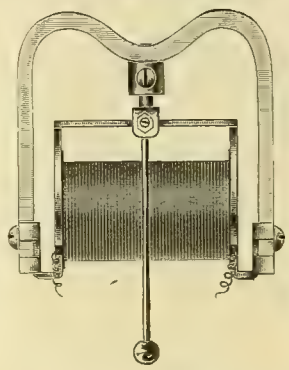
A PERFECT RINGER.



All of our magneto bells are equipped with **our new single core ringer.** You will undoubtedly find that this form of ringer possesses **many points** of superiority in **many respects** over all forms and types of double core ringers. Here are a few of the reasons:

1st. The magnetic joints in the electro-magnetic circuit are absolutely perfect.

2nd. Perfect symmetry in design means perfect symmetry in action.

3rd. Our ringer has the shortest possible length of magnetic circuit, which circuit encloses only one-half the depth of the winding

The fact that **one** of our competitors has **brought suit against us** for infringement on their **double-core** ringer is an open acknowledgment that our **single-core** ringer is superior to any and all **double-core** ringers, because they find that we are **cutting into their trade.**

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil; Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

THE LATEST BOOK.

"ELECTRIC LIGHTING,"

A PRACTICAL EXPOSITION OF THE ART FOR THE USE OF

Engineers, Students and Others Interested in the Installation or Operation of Electrical Plants.

BY FRANCIS B. CROCKER,

Professor of Electrical Engineering, Columbia University, New York.

Price $3, Prepaid. - Practical and Up-to-Date.

Just the Book you want. 450 Pages, over 150 Illustrations. Read the

TABLE OF CONTENTS:

Chapter I, Introduction; Chapter II, History of Electric Lighting; Chapter III, General Units and Measures; Chapter IV, Classification and Selection of Electric Lighting System; Chapter V, The Location and General Arrangement of Electric Lighting Plants; Chapter VI, Buildings for Electric Lighting Plants; Chapter VII, Possible Sources of Electrical Energy; Chapter VIII, The Steam Engine, History and General Principles; Chapter IX, Steam Boilers for Electric Lighting; Chapter X, Steam Engines for Electric Lighting, General Construction; Chapter XI, Typical Forms of Steam Engine for Electric Lighting; Chapter XII, Steam Engines for Electric Lighting, Selection, Installation and Management; Chapter XIII, Gas, Oil and Hot Air Engines; Chapter XIV, Water Wheels and Windmills; Chapter XV, Mechanical Connections between Engines and Dynamos, Direct Coupling, Belting and Shafting; Chapter XVI, Toothed, Friction and Other Gearing; Chapter XVII, Principles, Construction and Management; Chapter XXI, Applications of Accumulators in Electric Lighting; Chapter XXII, Switchboards, Including Switches, Fuses and Circuit-Breakers; Chapter XXIII, Electrical Measuring Instruments; Chapter XXIV, Lightning Arresters.

Every Engineer and Electrician who desires to thoroughly master the Art of Electric Lighting should have a copy of this book. Sent promptly.

ELECTRICIAN PUBLISHING COMPANY,

Suite 510 Marquette Building, CHICAGO.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a **New Book**, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 6½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 6½x3 inches, flexible cloth binding, 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 6½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors, How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to $0 50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways, Second edition, revised and enlarged. 183 illustrations.....$2.50

Desmond, Chas.—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter I. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised ..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

New Dynamo Tenders' Hand-Book.

By F. B. BADT.

226 Pages, 140 Illustrations. Flexible Cloth Binding. Size of Type Page 5 1-2x3 inches. Price $1.00.

This is, as the name indicates, a NEW BOOK, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 9,000 copies of the old Dynamo Tenders' Hand-Book sold, and over 7,000 of the new.

Electrician Publishing Co.,
510 Marquette Building, CHICAGO.

NEW EDITION.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 93 Pages. 47 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

Write us at once, enclosing **25 Cents** in stamps, postal note, express money order, and get one of these valuable books.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

STREET RAILWAY MEN

—And others engaged in electric railway work will be interested in

THE MOTOR ENGINEERS' AND ELECTRICAL WORKERS' HAND-BOOK.

By WM. LINTERN.

The Motor Engineers' and Electrical Workers' Hand-Book is compiled with a view of furnishing a book of reference in a simple and convenient form for the use of motor engineers and street railway men. The diagrams of controller connections and combinations will be found of great value in practical work. The methods of testing are both simple and reliable. The writer is indebted to the Westinghouse, General Electric, Walker and Steel Motor companies for information cheerfully furnished.

TABLE OF CONTENTS.

Chapter I.—Elementary Principles. Units, Ohm's Law, Watt, Kilowatt, Ampere, Turn, Hour, etc. Potential, E. M. F., Voltage, Drop of Potential, Resistance (Ohmic), Conductivity. **Chapter II.**—Magnetism and Electro-Magnetic Induction. **Chapter III.**—Circuits: Varieties of Circuits, Series, Shunt, Parallel or Multiple Arc, Joint Resistances of Parallel Circuits, Multiple Series, Series Multiple. **Chapter IV.** Dynamo Electric Machine. General Principles, Field Windings, (Varieties), Series, Shunt, Compound, etc. Short Shunt, Long Shunt. **Chapter V.**—Instructions for Operating Generators: Running a Single Generator, To Shut Down a Machine Not Run in Multiple, Sparking, Polarity, Excitation Grounds, Generators in Multiple, Connections, Running Generators in Multiple. To Shut Down a Machine Running in Multiple. **Chapter VI.**—The Electric Motor: General Principles, Counter Electromotive Force and Mechanical Power, Efficiency. **Chapter VII.**—Measurements and Tests of Street Railway Motors—Faults, Measurement by Drop of Potential Method (Examples), Insulation Tests, Voltmeter Method, Description of Voltmeter and Ammeter, The Wheatstone Bridge, Instructions for Operating, Drop of Potential in Motor Circuits. **Chapter VIII.**—Instructions for Operating Car Apparatus: Brushes, Sparking at Brushes, Bearings, Bucking, Fuse, Block, Operating Car, Trolley, etc. **Chapter IX.**—The Electric Motor Car in Detail. Series, Parallel, Controller, Reverse Switch, Rheostat, Fuse Box, Lightning Arrester, Heaters. **Chapter X.**—Definitions of Terms. **Chapter XI.**—Diagrams of Car Wiring and Controllers, with Written Descriptions and Diagrams of Combinations: Westinghouse System (G. No. 14, No. 28 and 28 A). General Electric (K. with W. P. Machines, K 2; General Electric Series Parallel Controller with Magnetic Brake). Walker System (B2, E) Steel Motor Co. System. **Chapter XII.**—General Electrical and Mechanical Information. Belting, Shafting, Pulleys and Gears, Melting Point, Specific Gravity and Relative Conductivity, Table Comparing Wire Gauges, Number, Dimensions, Height, Length and Resistance of Pure Copper Wire, Electrical Units and Formulas, Equivalent Carrying Capacity, Proportions of Gear Teeth Notes, Bill of Material for Span Wire Construction (Single Track) (Double Track), Bracket Construction, (Single Track) (Center Pole) (Double Track).

160 pages. Handsomely bound in cloth. $1.00. Heavy boards, 50c. Sent on receipt of price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

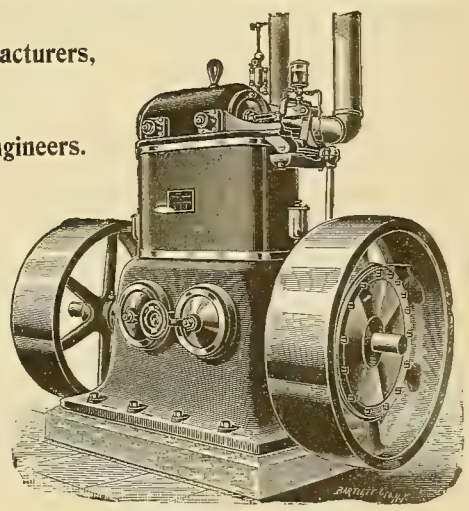
The Westinghouse Machine Company, Manufacturers,

Westinghouse, Church, Kerr & Company, Engineers.

Ten years ago the **Westinghouse Compound Engine** made the world's record for economic duty of **non-condensing engines.**

That record was attested by an engineer of unquestioned ability and standing. **It has been verified** by able experts many times since.

It stands to this day UNTOUCHED.



COMPOUND ENGINE.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

PRICE, $2.50.

Orders for above book, or any electrical work published promptly sent on receipt of price, postage prepaid.

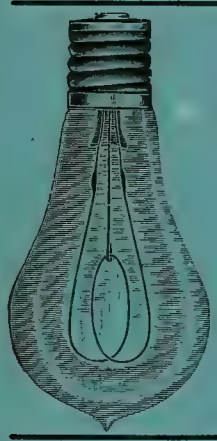
Portland, Ore.—124 First St.
Yokohama, Singapore and Manila—Bagnall & Hilles.



DEFINITE RESULTS.

With the high vacuum in our lamps,
With no possibility of blackening,
With an average maintenance of initial candle power for over 300 hours,
With a life of over 600 hours,

The Beacon Lamp Has No Equal.

Write us for particulars. Agents Wanted.

We make series lamps for arc circuit, together with a full line of miniature lamps.

Beacon Lamp Company,

New Brunswick, N. J.

Standard Electrical Dictionary.

By PROF. T. O'CONOR SLOANE.
Author of "Arithmetic of Electricity," "Electricity Simplified," "Electric Toy Making," Etc.

682 Pages, 393 Illustrations. Handsomely bound in cloth, 8vo, $3.

An Entirely New Edition, Brought Up to Date and Greatly Enlarged.

COMPLETE—CONCISE—CONVENIENT.

In publishing the "Standard Electrical Dictionary," the author has adhered to what the work purports to be, exhausting the subject of electrical terms, giving each title the clearness of explanation necessary to make the understanding of it complete without unnecessary elaboration. In this work, every electrical word, term, or phrase will be found intelligently defined.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in any way interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact, it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

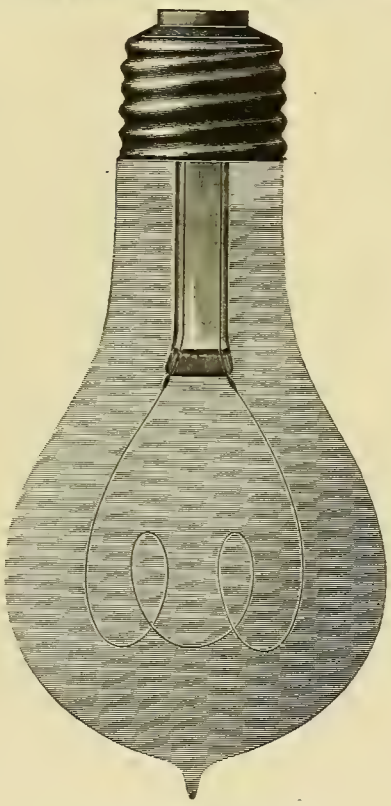
REPAIR SHOPS

In the West. ELECTRICAL REPAIRS AND MACHINE WORK OF EVERY DESCRIPTION. In having your repair work done by a company operating hundreds of dynamos and motors you are sure of good work and get the benefit of our experience.

CHICAGO EDISON COMPANY,

76 MARKET STREET, CHICAGO.

EDISON, JR. IMPROVED INCANDESCENT LAMP.



Vacuum Highest Improved. Concentrated, Brilliant White Light. Carbons Never Become Red. Standard Candle Power.

No Electrician who consults the interests of his patrons will use the old-fashioned kind since the advent of the EDISON, JR.

Although greatly superior, the prices of these Lamps have not been increased.

ILLINOIS ELECTRIC CO., Agents,

239 Madison Street, CHICAGO.

General Electrical Supplies.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt. **$3.50.**
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth. **$1 25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

All genuine "ELECTRA" Carbons are put up in packages bearing a label with the TRADE MARK "ELECTRA."

Infringers of my trade-mark will be rigidly prosecuted to protect the interest of purchasers of my carbons.

Notice—The "ELECTRA" Highest Grade Nuernberg Carbons are, as heretofore, manufactured for me by the world-renowned firm of **C. Conradty, of Nuernberg,** who owns both the oldest as well as the **largest carbon works in existence,** and whose carbons are recognized as the standard all the world over.

COLUMBIA CARBONS

For Enclosed Arcs.

As COLUMBIA is the gem of the ocean, so is the "COLUMBIA" the gem of Enclosed Arc Carbons.

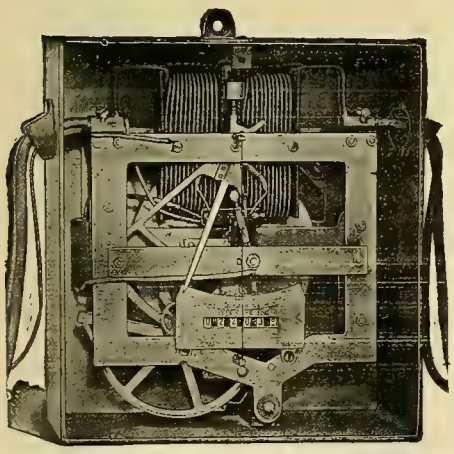
MANUFACTURED BY

THE NATIONAL CARBON CO.

600 HIGHLAND AVENUE, - - - - CLEVELAND, OHIO.

THE AMERICAN ELECTRIC METER CO.

9th St. and Montgomery Ave., Philadelphia, Pa.,



Is now prepared to take orders for immediate delivery of all sizes of 3-Wire Constant Potential Registering Meters.

This meter is calibrated ready for instant use.
This meter requires no knowledge of electricity to erect.
This meter shows the load passing every instant.
This meter is hermetically sealed.
This meter measures correctly with uneven loads.
This meter is magnetically shielded and has no permanent magnetism.
This meter can be calibrated with a watch in six minutes.
This meter requires no lubrication.
This meter is direct reading, having no multiplier or dials.
This meter will operate for years without opening.
This meter has no springs, jewels, frictional errors or lag.
This meter once right is always right.

Electricity AND Magnetism.

325 Pages. PRICE $2.00. 347 Illustrations.

A series of Thirty-four Practical Lessons covering the Science of Electricity from Its Fundamental Principles to Its Every-Day Applications. By Prof. D. C. Jackson, University of Wisconsin; Prof. H. S. Carhart, University of Michigan; Prof. B. F. Thomas, University of Ohio; Prof. Wm. A. Anthony, of New York; Prof. Brown Ayres, Tulane University; Prof. A. C. Perrine, Leland Stanford University, Cal.; Prof. Geo. D. Shephardson, University of Minnesota, and others.

A Comprehensive Treatise in Simple Language, Free from Algebraic Equations and Easily Understood.

CONTENTS:

CHAPTER I. **The Nature and Properties of Electricity.**—Origin of Electricity; Two Kinds; Laws of Attraction and Repulsion; Positive and Negative Charge; Terms, Conductors, Insulators, Electric Conductivity; Conveying Electricity; The Electroscope; Force Exerted Between Charged Bodies; Unit of Measurement of Quantity of Electricity; Electrometer.

CHAPTER II. **Machines for Generating Electricity by Friction and by Electric Induction.**—Making Machine to Continuously Generate Electricity by Friction; The Electrophorus; Induction Generator; Units of Electric Current and Pressure; Electricity Conveyed by Unit Current Each Second; Negatively and Positively Charged Conductors; Relation of Lightning and Sparks of Electrical Machine.

CHAPTER III. **Electric Batteries or Appliances for Generating Electricity by Chemical Action.**—Action of Batteries; Electric Pressure; Voltaic Electricity; Direction of Current Flow; Production of Continuous Current; Battery Cells in Series; Production of Pressure by Cells: Polarization and Its Avoidance; Leclanche Cell; Open Circuit Cells.

CHAPTER IV. **Electric Batteries or Appliances for Generating Electricity by Chemical Action (Concluded).**—Closed Circuit Cells; Local Action; Law of Electro-chemical Action; Electro-chemical Equivalent; Primary Batteries Compared with Dynamos for Furnishing Current; Uses of Batteries; Difference Between a Primary and Storage Battery; How Storage Batteries are Made; Parallel Connection of Plates in Storage Batteries.

CHAPTER V. **The Nature and Properties of Magnetism, Magnetic Fields.**—Permanent Magnetism: Magnetic Attraction and Repulsion; Poles of Magnet; Magnitude of Force Between Two Magnets; Aging Magnets; Earth's Action on Magnetic Needle; Magnetic Field; Action of Lines of Force.

CHAPTER VI. **The Magnetic Effects of Electric Currents and Magnetic Circuits.**—Effect of Electric Current on Magnetic Needle; Relation Between Direction of Lines of Force and Direction of Current Flow; Determination of Current Direction by Compass; Ampere Turns; Solenoids; Ampere's Theory; Solenoids with Steel or Iron Cores; Residual Magnetism; Electro-Magnets; Magnetic Permeability; Magnetic Reluctance; Magneto Motive Force or Magnetic Pressure.

CHAPTER VII. **Ohm's Law of the Flow of Electricity.**—Pressure; Resistance; Current; Volt; Ohm; Ampere; Mercury Resistances; Conductivity of Copper Compared with Other Metals; Resistance of Circuits Made Up of the Same Parts in Parallel; Joint Resistances; Fall of Voltage Over Resistance; Effect of Temperature on Resistance; Copper Temperature Coefficient.

CHAPTER VIII. **Heating Effects of Electric Currents. Miscellaneous Effects of Electric Currents.**—Foot-pound; Joule; Horse-power; Watt; Kilowatt; Watts per Horse-power; Heating Effects on Bearings of Machinery; Effect of Electricity on Nerves of Animals; Muscular Effect of Strong Currents.

CHAPTER IX. **Galvanometers and Voltameters.**—Differences in Construction for Large and Small Currents; Presence and Direction of Currents Shown by Galvanometer; Strength of Current Indicated; Tangent Galvanometer; Reflecting Galvanometer; Needle Suspension; d'Arsonval Galvanometer; Terms "Dead-Beat," "Calibrate;" Voltameter; Electrolyte, Electrolysis; Electrode; Forms of Voltameters.

CHAPTER X. **Measurement of Electrical Resistance.**—Resistance Measured by Substitution; Resistance Boxes; Use of German Silver; Coils; Wheatstone Bridge; Measuring Resistances with Bridge; Measuring Very High Resistances; Practical Examples.

CHAPTER XI. **Every-day Measurements of Electric Currents and Pressure.**—Three Effects by Which Currents are Directly Measured; Amperemeters; Milliampere; Microampere; Three Classes of Magnetic Amperemeters; Weston Amperemeter; Electro Dynamometers; Hot Wire Instruments; Scales of Amperemeters; Alternating Current Measuring Instruments; Measuring Very Large Currents; Measuring Electric Pressures; Voltmeters; Cardew Voltmeter; Electrometers; Electrostatic Voltmeters; Standard Cells; Measuring Currents by Voltmeter and a Standard Resistance.

CHAPTER XII. **Every-day Measurements of Electric Power, Condensers and the Measurement of their Capacity.**—Wattmeters; Electrodynamometer Used as Wattmeter; Recording Wattmeters; Coulomb Meters; Watt Hour; Ampere Hour; Capacity; Farad; Microfarad; Condenser; Capacity of Condenser; Charging Condenser; Specific Inductive Capacity; Selection of Insulation for Telephone Cables; Capacity of Underground Wires; Comparing Capacities by Ballistic Galvanometer; Practical Capacity Measurements; Leyden Jar.

CHAPTER XIII. **Electrolytic Deposition of Metals.**—Electroplating; Metals Commonly Used in Plating; Salt of a Metal; Nitrate of Silver; Cyanide of Silver and of Potassium; Solution for Silver Plating; Vats; Quality of Electrolytic Deposit; Effect of Too Great or Small Currents; Cleaning Articles to be Plated; Gilding Inside of Silver Articles; Base Metals on Which Nickel is Usually Plated; Solution for Nickel Plating; Electrotyping; Electrotype Molds; Electrotype Finishing; Electrolytic Refining of Copper; Solution Used.

CHAPTER XIV. **The Electric Telegraph.**—Elements of Electric Telegraph; Telegraph Circuits; Telegraphic Signals; Sending and Receiving; Telegraph Lines; Sounder; Relays; Local Circuits; Multiple Telegraphy; Duplex Telegraphy; Diplex Telegraphy; Quadruplex Telegraphy.

CHAPTER XV. **Multiple Telegraphy.**—Differential Relay; Polarized Relay; Pole Changer; Principles of Operation of Diplex, Quadruplex, Bridge Duplex; Artificial Line; Autographic Telegraphy.

CHAPTER XVI. **The Telephone.**—Bell Telephone; Microphone; Blake Transmitter; Exchanges; Switchboard; Long-Distance Transmitter.

CHAPTER XVII. **The Construction of Telegraph and Telephone Lines and Instruments.**—Poles; Cross-Arms; Pins; Joints; Insulators; Insulation; Ground Plates; Underground Cables; Conduits; Fuses; Multiple Switchboards.

CHAPTER XVIII. **Testing Lines for Insulation and Conductivity and the Location of Leaks and Breaks.**—Line Troubles; Grounds; Crosses; Locating Trouble; Earth Currents; Line Conductivity and Insulation; Testing.

CHAPTER XIX. **Principles of Continuous Current Dynamos and Motors.**—Electric Conductor in Magnetic Field; Field Strength; Induced Electric Pressure; Direction of Current; Moving Conductors; Alternating Current; Dynamos; Magnetos; Commutator.

CHAPTER XX. **Principles of Continuous Current Dynamos and Motors, their Construction, Care and Attendance.**—Gramme Armature; Siemens Armature; Armature Current; Laminating Cores; Foucault or Eddy Currents; Hysteresis; Fundamental Principles of Dynamos and Motors; Points of Good Dynamo; Counter Electric Pressure; Types of Field Windings; Series, Shunt and Compound Wound Machines; Multipolar Machines; Regulation; Care and Maintenance.

CHAPTER XXI. **Arc Lighting and Arc Light Machinery.**—The Arc; Arc Lamps; Principles of Operation; Connections; Arc Dynamos; Current and Pressure Required; Making of Arc Carbons; Regulators; Arc Light Switchboards.

CHAPTER XXII. **Incandescent Lighting and Power Transmission, Two, Three and Five Wire Systems of Distribution for Electric Lights and Motors.**—Incandescent Lamp; Filaments; Vaccuum; Material for and Making of Filaments; Advantages of Incandescent Lamps; Incandescent and Motor Circuits; Constant Pressure; Loss of Voltage; Circular Mils; Practical Examples; Weight of Copper Required for Transmission of Power at Different Pressures; Three-Wire System; Motor Starting Resistances.

CHAPTER XXIII. **Construction of Electric Light and Power Circuits, and Their Testing.**—Overhead Electric Light Wires; Weather-Proof Wire; Arc Circuit Wires; "Drawing In" and "Built In" Underground System; Underground Electric Light Cables; Edison Tubing; Feeders; Mains; Inside Wiring; Cleat Work; Moulding Work; Concealed Work; Dangers from Fires; Distribution System.

CHAPTER XXIV. **Testing Electric Light Circuits and the Distribution and Measurement of Light.**—Faults; Soldered Joints; Magneto Bell; Use of Voltmeter to Locate Grounds on Arc Circuits; Ground Detector; General Testing; Photometer; Standard Candles; Illuminating Effect of Lamps; Effect of Opal Globes.

CHAPTER XXV. **Electro-Magnetic Induction.**—Effect of Cutting Lines of Force by an Electric Conductor; Induced Currents; Induction Coils; Cores of Induction Coils; Transformers; Direction of Induced Current; Self Induction; Attraction and Repulsion of Parallel Wires Carrying Currents.

CHAPTER XXVI. **Alternating Currents.**—Alternator; Electrolytic Effect of Pulsating Current; Heating Effect of Alternating Current; Effective Value; Alternating Current; Measurements; Frequency; Period; Apparent Resistance.

CHAPTER XXVII. **Alternating Currents and Alternating Current Machinery (Concluded).**—Power Used in Alternating Circuits; Alternating Currents for Lighting; Making Transformers; Testing Transformers; Building Alternators; Number of Alternations; The Exciter; Running Alternators in Parallel; Synchronous Motors, Two-Phase and Three-Phase Systems; Induction Motors; Squirrel-Cage Armature; Mesh Connection; Star Connection.

CHAPTER XXVIII. **Miscellaneous Applications of Electric Motors.**—Uses of Electric Motors; Motors in Machine Shops; Waste of Power in Factories; Advantages of Removing Shafts and Belts; Estimating Electrical Power Required; Electric Elevators; Electric Launches.

CHAPTER XXIX. **Electric Railways.**—Richmond Electric Railroad; Trolley Wire; Trolley; Track; Use of Two Motors; Rail Bonds; Heavy Electric Locomotives.

CHAPTER XXX. **Methods of Handling and Controlling Railway Motors and Generators.**—Output Records; Recording Voltmeters; Load of Electric Railway Plant; Application of Storage Batteries to Smooth Road Curve; Methods of Controlling Street Car Motors; Station Instruments; Equalizer.

CHAPTER XXXI. **Model Electric Plants.**—First Central Station; Changes in General Mechanical Construction of Dynamos; Instruments; Multiple Arcing Galvanometers; Use of Double and Single Pole Switches; Operating Dynamos in Parallel; Feeder Connections in Continuous and Alternating Stations; Throwing Dynamo Into Circuit; Cutting Dynamo Out.

CHAPTER XXXII. **Underwriter's Rules, Etc.**—Necessity of Rules; Special Points in Wiring; Insulation of Sockets, Fuses, Fixtures; Annunciator Wire; Office Wire; Leaky Wires.

CHAPTER XXXIII. **Electric Welding, Forging, Etc.; Electricity Applied to the Kitchen.**—Electrical Methods Applied to Metal Working; Thomson Apparatus for Heating Metals; Welding by Thomson Method; Bernardos Process of Working Metals; Bringing Piece of Metal to High Temperature by Dipping in Pail of Water; Electric Current for Warming and Cooking; Electric Heating and Stoves Compared.

CHAPTER XXXIV. Electro-Therapeutics; Galvanic Current; Faradic Current; Static Electricity; Electric Osmosis; Electro-Cautery; Medical Electric Lights.

PRICE $2.00. **Sent postage prepaid to any address in the world on receipt of price. The Ideal Work for Electricians, Central Station Men, Engineers, Dynamo Tenders, Linemen, Students, Etc.**

THE "CLARK" WIRE.

FOR SWITCHBOARD. RAILWAY and MOTOR USE.

All sizes of Stranded and Flexible Wire and Cables with Clark's Insulation

Inspector Boston Fire Underwriters' Union says:
"A thoroughly reliable and desirable wire in every respect."

The Clark wire has been before the public and in use for the past ten years, and has met with universal favor. We guarantee our insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class insulated wire. We shall be pleased to mail Catalogues, with terms and discounts for quantities.

THEY STILL USE IT.

Stover Bicycle Manufacturing Co.

IT COSTS SO LITTLE AND WORKS SO WELL

FREEPORT, ILL., March 2nd, 1897.

The Boiler Expurgator Co., Chicago, Ill.

Gentlemen:—I have just used your Boiler Expurgator with astonishing results. To begin with I have always been very sceptical in regard to the different boiler compounds and would never have tried yours had not a friend of mine who runs between Dubuque and Chicago on the Illinois Central induced me to use it, telling me of the results he had obtained on his locomotive. It goes beyond anything I ever tried and we have tried numerous compounds, and I can conscientiously say that I never expected to secure anything that would do the work of your Boiler Expurgator. We cheerfully recommend it to anyone and you may refer to us at any time.

Very truly yours,
STOVER BICYCLE MFG. CO.
W. A. Hance, Supt.

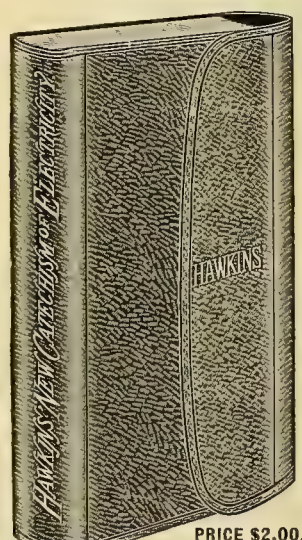
BERTHOLD & JENNINGS,
CHEMICAL BUILDING, ST. LOUIS.

HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

THE OMAHA EXPOSITION.

When the World's Fair at Chicago ceased to exist, it was supposed that we should ne'er look upon its like again. However, the Trans-Mississippi Exposition at Omaha has effectively reproduced in similarity all of the buildings which made the White City so attractive in 1893.

It does not now take two weeks to wander through grounds and structures and then be compelled to go away with a jumble of ideas, for the Omaha Exposition people have profited by past experience, and have so improved the arrangement of exhibits that no more than two or three days of time need be consumed in admiration and inspection of the marvelous resources of the West, collected together in the chief city of Nebraska.

Even the new Midway is a reproduction of the far-famed Street of All Nations of 1893, with many improvements upon the original.

The electric lighting of the buildings, grounds and lagoons at night makes a scene of enchanting beauty, alone worth traveling a thousand miles to see.

The means of communication between the city and grounds are ample, and the distance to be traversed is short.

The ways of reaching Omaha are innumerable, but chief among them is the direct Chicago and Omaha short line of the Chicago, Milwaukee & St. Paul Railway, with its electric lighted, vestibuled trains, leaving Chicago every night at 6:15 p. m., and arriving Omaha at 8:20 the next morning. Dining car service en route.

Excursion tickets are on sale at every coupon ticket office in the United States over the Chicago, Milwaukee & St. Paul Railway through Northern Illinois and Central Iowa, as well as at 95 Adams street, and at the Union Passenger Station, Canal and Adams streets, Chicago.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cutting Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

X-RAYS

FOR EVERYBODY.

By Edward Trevert.

Just off the Press. 93 Pages. 47 Illustrations.

Fully describes in plain terms how to perform experiments with the X-Ray Outfit. Tells what electrical apparatus is needed and how to manipulate it. Illustrations show clearly how to connect up the Crookes Tube, the Ruhmkorff Coil, and how to run them, either by batteries or electric light currents. How to make an X-Ray Outfit very cheaply, including a Fluoroscope.

STREET RAILWAY MEN

—And others engaged in electric railway work will be interested in

THE MOTOR ENGINEERS' AND ELECTRICAL WORKERS' HAND-BOOK.

By WM. LUTERN.

The Motor Engineers' and Electrical Workers' Hand-Book is compiled with a view of furnishing a book of reference in a simple and convenient form for the use of motor engineers and street railway men. The diagrams of controller connections and combinations will be found of great value in practical work. The methods of testing are both simple and reliable. The writer is indebted to the Westinghouse, General Electric, Walker and Steel Motor companies for information cheerfully furnished.

TABLE OF CONTENTS.

Chapter I.—Elementary Principles. Units, Ohm's Law, Watt, Kilowatt, Ampere, Turn, Hour, etc. Potential, E. M. F., Voltage, Drop of Potential, Resistance (Ohmic), Conductivity. **Chapter II.**—Magnetism and Electro-Magnetic Induction. **Chapter III.**—Circuits: Varieties of Circuits, Series, Shunt, Parallel or Multiple Arc, Joint Resistances of Parallel Circuits, Multiple Series, Series Multiple. **Chapter IV.** Dynamo Electric Machine. General Principles, Field Windings, (Varieties), Series, Shunt, Compound, etc. Short Shunt, Long Shunt. **Chapter V.**—Instructions for Operating Generators: Running a Single Generator, To Shut Down a Machine Not Run in Multiple, Sparking, Polarity, Excitation Grounds, Generators in Multiple, Connections, Running Generators in Multiple. To Shut Down a Machine Running in Multiple. **Chapter VI.**—The Electric Motor: General Principles, Counter Electromotive Force and Mechanical Power, Efficiency. **Chapter VII.**—Measurements and Tests of Street Railway Motors—Faults, Measurement by Drop of Potential Method (Examples), Insulation Tests, Voltmeter Method, Description of Voltmeter and Ammeter, The Wheatstone Bridge, Instructions for Operating, Drop of Potential in Motor Circuits. **Chapter VIII.**—Instructions for Operating Car Apparatus: Brushes, Sparking at Brushes, Bearings, Bucking, Fuse, Block, Operating Car, Trolley, etc. **Chapter IX.**—The Electric Motor Car in Detail. Series, Parallel, Controller, Reverse Switch, Rheostat, Fuse Box, Lightning Arrester, Heaters. **Chapter X.**—Definitions of Terms. **Chapter XI.**—Diagrams of Car Wiring and Controllers, with Written Descriptions and Diagrams of Combinations: Westinghouse System (G. No. 14, No. 28 and 28 A). General Electric (K, with W. P. Machines, K 2; General Electric Series Parallel Controller with Magnetic Brake). Walker System (B2, E) Steel Motor Co. System. **Chapter XII.**—General Electrical and Mechanical Information. Belting, Shafting, Pulleys and Gears, Melting Point, Specific Gravity and Relative Conductivity, Table Comparing Wire Gauges, Number, Dimensions, Height, Length and Resistance of Pure Copper Wire, Electrical Units and Formulas, Equivalent Carrying Capacity, Proportions of Gear Teeth Notes, Bill of Material for Span Wire Construction (Single Track) (Double Track), Bracket Construction, (Single Track) (Center Pole) (Double Track).

160 pages. Handsomely bound in cloth, $1.00. Heavy boards, 50c. Sent on receipt of price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG., CHICAGO.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator; Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket: Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field-Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

REWIRED WITH RAVEN WHITE CORE WIRE

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY.
CHICAGO, April 30, 1896.
NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly,
THE FERRIS WHEEL CO.

SOUTHERN ELECTRICAL SUPPLY CO., ST. LOUIS.

CHICAGO, October 24, 1898.

GENTLEMEN: Have you any leather belts that need repairs, or any that are oil-soaked, dirty and slipping on pulleys? If so send them to us, we will make you price for putting them in first-class condition, and if price is not satisfactory we will return belts and pay freight. If cannot spare belts, write us size, we will loan you one.

If you have any old belts to sell, no matter what their condition, send them in, we will make you an offer; if it is not accepted, will return them and pay freight. If these propositions do not meet your approval let us know your objections, we will overcome them. Fact is, we are out for business and can do you good if given an opportunity.

If you want any information about belting, ask us for it; we have lots on tap GRATIS. Do you want to buy any belting? Let us hear from you. Yours truly,

P. S.—We remove every trace of oil from leather belting without injury to leather or cement. We then treat it with Amber Leather Preserver, which renders it oil, water and steam proof.

DOMESTIC
Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructions whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

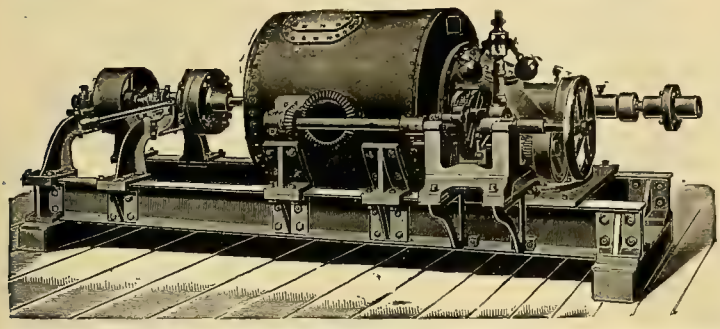
Victor Turbine Water Wheel.



Cylinder or Register Gate—Close Regulation and High Efficiency at Full and Partial Gate.

The attention of ELECTRIC COMPANIES is called to this **CELEBRATED WATER WHEEL** as particularly adapted to their use, on account of its **remarkably steady motion, high speed and great efficiency and large capacity** for its **diameter,** being **double** the **power** of most wheels of the same diameter. It is used by a number of the leading electric companies with great satisfaction. In the economical use of water it is without an equal, producing the highest per cent of useful effect **guaranteed.**

SEND FOR CATALOGUE AND PARTICULARS.

The accompanying engraving represents a single 10-inch Victor Turbine on horizontal shaft to develop 36 H. P. under 38 feet head. Arranged with 12-inch Worrell Friction Coupling at one end to disconnect pulley.

We are now prepared to furnish Victor Turbines, either single or in pairs, on horizontal shafts and where the situation admits of their use we recommend them.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

THE BEST ANSWER TO A QUESTION

On Wiring, can be found in the New Book,

"WIRING TABLES,"

"How They are Made and How to Use Them."

BY THOS. C. CRIER.

Whenever you are asked a question on Wiring, refer the questioner to this book, and he will find what he desires.

THE BOOK CONTAINS: The Law of Resistance, Electromotive Force and Current Fully Explained. How to Calculate the Size of Wires. The Different Methods of Wiring, with Diagrams. How to Apply the Simple Formula, in Calculating the Size of Wires Under all Conditions. Diagrams for Wiring 3 Point, 4 Point, Head Light and Heat Regulating Switches.

27 TABLES ON WIRING AND VALUABLE DATA.

Ohm's law is described in such plain and simple language that one cannot fail to clearly understand it.

Bound in Cloth, 80 Pages, Size 5x7½ in. Sent, prepaid, on receipt of price, $1.00.

ELECTRICIAN PUBLISHING CO., 510 Marquette Building, **CHICAGO.**

STREET RAILWAY MEN

—And others engaged in electric railway work will be interested in

THE MOTOR ENGINEERS' AND ELECTRICAL WORKERS' HAND-BOOK.

By WM. LINTERN.

The Motor Engineers' and Electrical Workers' Hand-Book is compiled with a view of furnishing a book of reference in a simple and convenient form for the use of motor engineers and street railway men. The diagrams of controller connections and combinations will be found of great value in practical work. The methods of testing are both simple and reliable. The writer is indebted to the Westinghouse, General Electric, Walker and Steel Motor companies for information cheerfully furnished.

TABLE OF CONTENTS.

Chapter I.—Elementary Principles. Units, Ohm's Law, Watt, Kilowatt, Ampere, Turn, Hour, etc. Potential, E. M. F., Voltage, Drop of Potential, Resistance (Ohmic), Conductivity. **Chapter II.**—Magnetism and Electro-Magnetic Induction. **Chapter III.**—Circuits: Varieties of Circuits, Series, Shunt, Parallel or Multiple Arc, Joint Resistances of Parallel Circuits, Multiple Series, Series Multiple. **Chapter IV.** Dynamo Electric Machine. General Principles, Field Windings, (Varieties), Series, Shunt, Compound, etc. Short Shunt, Long Shunt. **Chapter V.**—Instructions for Operating Generators: Running a Single Generator, To Shut Down a Machine Not Run in Multiple, Sparking, Polarity, Excitation Grounds, Generators in Multiple, Connections, Running Generators in Multiple. To Shut Down a Machine Running in Multiple. **Chapter VI.**—The Electric Motor: General Principles, Counter Electromotive Force and Mechanical Power, Efficiency. **Chapter VII.**—Measurements and Tests of Street Railway Motors.—Faults, Measurement by Drop of Potential Method (Examples), Insulation Tests, Voltmeter Method, Description of Voltmeter and Ammeter, The Wheatstone Bridge, Instructions for Operating, Drop of Potential in Motor Circuits. **Chapter VIII.**—Instructions for Operating Car Apparatus: Brushes, Sparking at Brushes, Bearings, Bucking, Fuse, Block, Operating Car, Trolley, etc. **Chapter IX.**—The Electric Motor Car in Detail. Series, Parallel, Controller, Reverse Switch, Rheostat, Fuse Box, Lightning Arrester, Heaters. **Chapter X.**—Definitions of Terms. **Chapter XI.**—Diagrams of Car Wiring and Controllers, with Written Descriptions and Diagrams of Combinations: Westinghouse System (G. No. 14, No. 28 and 28 A). General Electric (K. with W. P. Machines, K 2; General Electric Series Parallel Controller with Magnetic Brake). Walker System (B2, E) Steel Motor Co. System. **Chapter XII.**—General Electrical and Mechanical Information. Belting, Shafting, Pulleys and Gears, Melting Point, Specific Gravity and Relative Conductivity, Table Comparing Wire Gauges, Number, Dimensions, Height, Length and Resistance of Pure Copper Wire, Electrical Units and Formulas, Equivalent Carrying Capacity, Proportions of Gear Teeth Notes, Bill of Material for Span Wire Construction (Single Track) (Double Track), Bracket Construction, (Single Track) (Center Pole) (Double Track).

160 pages. Handsomely bound in cloth, $1.00. Heavy boards, 50c. Sent on receipt of price.

"Plain Tales from the Hills."

Mr. R. G. Vance, Jr., Superintendent of the Stevens Coal Company, makes the following statement regarding

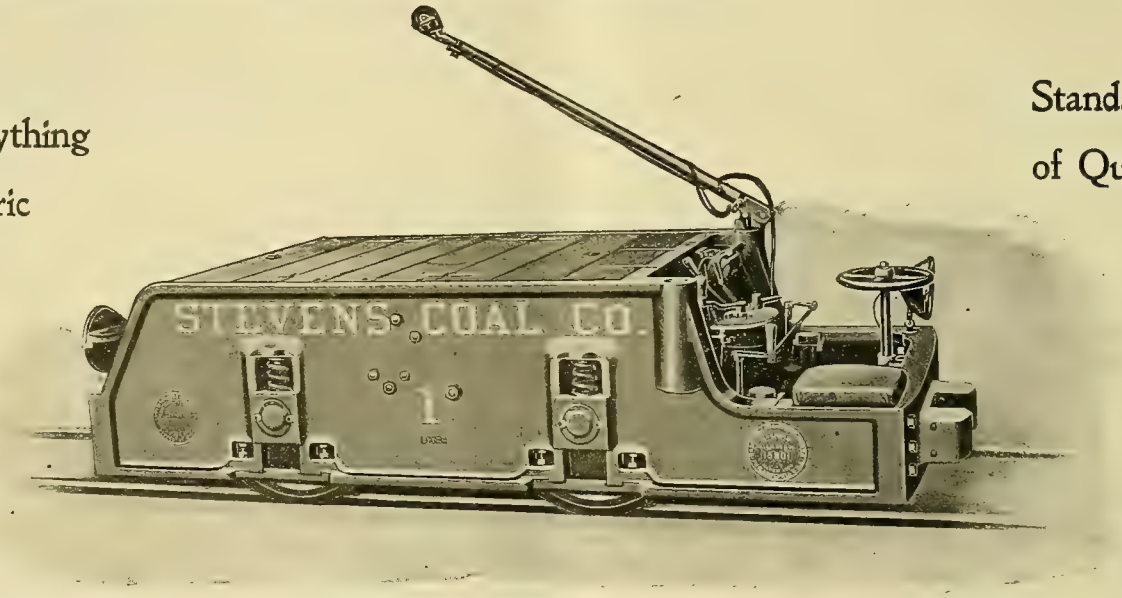
A Westinghouse Mining Motor

in operation in their mines:

"It gives us pleasure to say that this motor is giving the very highest possible satis-
"faction and is attracting considerable attention in this valley. It has been running since
"May first and has not cost a dollar in the shape of repairs.

Everything Electric

Standard of Quality



Baldwin-Westinghouse Electric Mine Locomotive, Class $4\frac{2}{5}$C.

"It is running on a road of 25-lb. steel four thousand feet long over undulating grades
"varying from 1 to 6 feet per 100 feet. Its regular load now consists of 20 cars of 1 1-2
"tons capacity, and the time required for each round trip is from 17 to 19 minutes. We have
"pulled as high as 25 of these cars at one trip, which it did with all ease. When necessity
"requires we can pull 30 cars, giving 50 per cent more capacity than you guaran-
"teed."

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

Vol. XXIII. CHICAGO, NOVEMBER 5, 1898. No. 19

SIMPLEX INSULATED WIRES AND CABLES.

RUBBER COVERED, WEATHERPROOF, UNDERGROUND AND SUBMARINE.

WESTERN SELLING AGENT: H. R. HIXSON, 1437 Monadnock Block, CHICAGO.

Simplex Electrical Company, 75-81 Cornhill, BOSTON, MASS.

ALFRED F. MOORE,

MANUFACTURER OF

INSULATED ELECTRIC WIRE,

FLEXIBLE CORDS AND CABLES.

200 AND 202 NORTH THIRD STREET, - PHILADELPHIA, PA.

OKONITE TRADE MARK

1889—Paris Exposition, Medal for Rubber Insulation.

1893—World's Fair, Medal for Rubber Insulation.

THE STANDARD FOR RUBBER INSULATION.

Sole Manufacturers of

Okonite Wires, Okonite Tape, Manson Tape, Candee Weather-proof Wires.

THE OKONITE CO., LTD.

Willard L. Candee, M. Durant Cheever, } Managers. 253 Broadway, New York. Geo. T. Manson, Gen'l Supt. W. H. Hodgins, Secy.

The Fibre-Graphite Commutator Brush.

(U. S. and Foreign Patents.)

No Sparking Under Varying Load.
No Wear on Commutator.
No Shifting of Quadrant.
80 per cent. Pure Graphite.

For Sample Order, and Prices, write to

Holmes Fibre-Graphite Mfg. Co., Station Z, Philadelphia.

THE "AMERICAN" FUEL

ECONOMIZER

THE BEST IN THE WORLD.

BROOMELL, SCHMIDT & CO., Ltd.

MANUFACTURERS, YORK, PA., U. S. A.

Cable address, Broomell, York, A B C Code, 4th Edition.

GREEN ENGINEERING CO., 518 Western Union Building, Chicago, Ill., Sales Agents for Chicago and Vicinity.

REPAIR SHOPS

In the West. ELECTRICAL REPAIRS AND MACHINE WORK OF EVERY DESCRIPTION. In having your repair work done by a company operating hundreds of dynamos and motors you are sure of good work and get the benefit of our experience.

CHICAGO EDISON COMPANY,

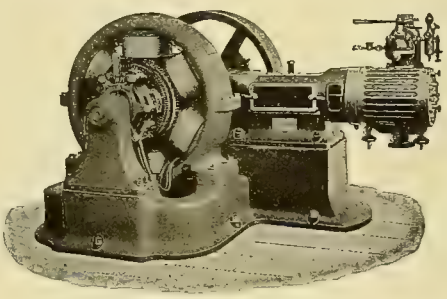
76 MARKET STREET, CHICAGO.

THE AKRON ELECTRICAL MFG. CO.,

AKRON, OHIO.

MAKES

Generators,
Motors,
Direct-Connected,
Slow Speed,
Moderate Speed,
Mining Locomotives.



All of the highest efficiency, most modern construction and most graceful design.

WRITE FOR CIRCULARS AND READ OUR GUARANTEE.

A VALUABLE NEW WORK.

ELECTRICIANS' HANDY-BOOK

OF USEFUL INFORMATION.

Edited by A. E. WATSON, A. M., Teacher of Electricity, Brown University, Providence, R. I.

Compiled by E. T. BUBIER, 2d.

ILLUSTRATED.

A Compilation from the works of Sylvanus P. Thompson, Kapp, Allsop, Munroe and Jamieson, Watson, Bottone, Bonney, Watt, Poole, Trevert, Haskins, Morrow and Reid, and others.

This book gives a large number of receipts for making Battery Fluids, Battery Pastes, Insulating Materials and Varnishes, Electro-Plating Solutions, etc. Tells how to make Electric Batteries, Bells, Telephone, Motors, Dynamos, Induction Coils, Influence and Static Machines, etc. Gives formulæ for winding Dynamos, Motors, Armatures, Field Magnets, Transformers. Contains many Rules, Tables, Data, etc. In fact it is almost a complete cyclopædia of Electricity. It is neatly bound and of a convenient size to be carried in the pocket for handy reference.

CONTENTS.

PART
1. History.
2. Theory.
3. Measurements. (Electric and Magnetic.)
4. Electric Batteries.
5. Electro-Chemistry and Metallurgy.
6. The Telegraph and Telephone.
7. Dynamos and Motors.
8. Management of Dynamos and Motors.

PART
9. Electric Lighting.
10. Transformers.
11. Wiring for Electric Power.
12. Wiring for Bell Fitting and Gas Lighting
13. Electric Railways.
14. Miscellaneous.
15. Useful Tables.
16. Logarithms.

Contains over four hundred and fifty pages and many illustrations.

PRICE, CLOTH, ONLY $2.50; POSTPAID.

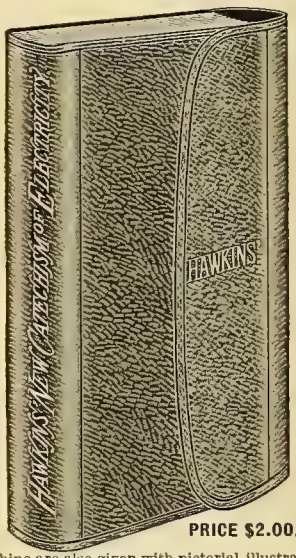
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to-date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

LUIS JACKSON,
Industrial Commissioner, C., M. & St. P. R'y,
450 Old Colony Building CHICAGO, ILL.

HELLO!

Who Leads in Telephone Wood Specialties?

The Cabinet Manufacturing Company,

STEUBENVILLE, OHIO.

THE BEST ANSWER TO A QUESTION

On Wiring, can be found in the New Book,

"WIRING TABLES,"

"How They are Made and How to Use Them."

BY THOS. C. CRIER.

Whenever you are asked a question on Wiring, refer the questioner to this book, and he will find what he desires.

THE BOOK CONTAINS: The Law of Resistance, Electromotive Force and Current Fully Explained. How to Calculate the Size of Wires. The Different Methods of Wiring, with Diagrams. How to Apply the Simple Formula, in Calculating the Size of Wires Under all Conditions. Diagrams for Wiring 3 Point, 4 Point, Head Light and Heat Regulating Switches.

27 TABLES ON WIRING AND VALUABLE DATA.

Ohm's law is described in such plain and simple language that one cannot fail to clearly understand it.

Bound in Cloth, 80 Pages, Size 5x7½ in. Sent, prepaid, on receipt of price, $1.00.

Important Telephone Books.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.

This handbook is a complete treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.

This book describes the construction of the various forms of transmitting and receiving devices, the signaling mechanisms, and the switchboard apparatus at the central station. It is written by two well-known electricians, and has the merit of being the latest work on the subject.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.

In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view, it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Sixth edition. 16mo, 50 pp. Price 25 cents.

This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Second edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pages. 333 illustrations. Price $4.50.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. The purpose for which this book is written is to furnish information to those who may desire to construct or use telephone apparatus or lines on a small scale. Price $1.00.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp. 168 illustrations. Price $2.00.

TELEPHONE SYSTEMS ON THE CONTINENT OF EUROPE. By Bennett. 436 pages. 169 illustrations. Price $4.50.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pages. 23 illustrations. Price $1.00.

BELL'S ELECTRIC SPEAKING TELEPHONE. Its Invention, Construction, Application, Modification and History. By Prescott. New edition, revised and enlarged. 795 pages. 516 illustrations. Price $4.00.

PHILIPP REIS, INVENTOR OF THE TELEPHONE. A Biographical Sketch with Documentary Testimony. By Thompson. Translation of the original papers of the inventor and contemporary publications. 182 pages. 2 plates and 48 engravings. Price $3.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pages. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Works Published, Sent on Receipt of Price.

OPEN LETTER.

NOV. 1, 1898.

GENTLEMEN:—We are pleased to advise that we have secured the General Selling Agency for the Warren Electric Mfg. Co., Manufacturers of the Warren Alternator, also of the Moloney Electric Co., Manufacturers of the Moloney Transformers.

In the "WARREN ALTERNATOR," we are able to offer to the trade an inductor type of machine that combines with a medium price the very salient features of simplicity, durability, high efficiency and close regulation. This machine has no Revolving Wires, Brushes or Commutator. We can furnish this machine in all sizes.

In the "MOLONEY TRANSFORMER," we are able to offer to the trade a transformer equal if not superior to any on the market. We are able to offer it at a reasonable price, and we back it up with strong guarantees.

We will be pleased to furnish descriptive pamphlets and quote you prices on application.

We can make prompt shipments of them from St. Louis.

In connection with the above we are now prepared to make shipments of the "ADAMS-BAGNALL ALTERNATING ENCLOSED ARC LAMPS," which are up to the usual high standard of the Adams-Bagnall Arc Lamps for other Circuits.

We have ready for distribution our ALTERNATING CURRENT BULLETIN containing cuts and full descriptions of the above Generators, Transformers and Arc Lamps, and we will be pleased to mail same upon application.

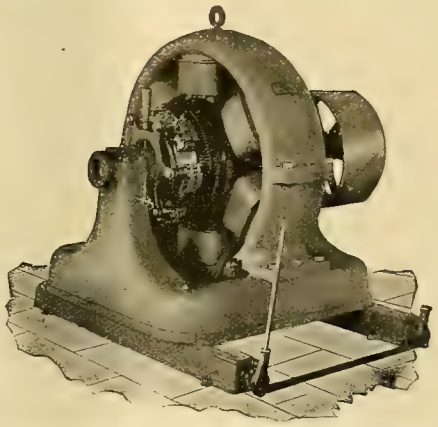
ELECTRIC MINING, LIGHTING AND POWER MACHINERY,
ALL OF
THE HIGHEST GRADE.



Write for circulars and read our guarantee of 25 per cent. continuous overload, with 52° rise in temperature.

Engineers Should Investigate

the quality, hence the economy of all supplies purchased for their plants. This particularly applies to packing for steam, hot and cold water, gas, ammonia, etc.

BEWARE

of the fellow that tells you that *his* packing is just as good as **Garlock's,** but is also much cheaper. Garlock's Packings have been the standard for nearly a quarter of a century, and are so recognized by engineers in all sections of the globe.

Every Box of Garlock Packing has our label with Red Trade Mark. Send for Samples, New Catalogue and Prices.

THE BEST ANSWER TO A QUESTION

On Wiring, can be found in the New Book,

"WIRING TABLES,"

"How They are Made and How to Use Them."

BY THOS. C. CRIER.

Whenever you are asked a question on Wiring, refer the questioner to this book, and he will find what he desires.

THE BOOK CONTAINS: The Law of Resistance, Electromotive Force and Current Fully Explained. How to Calculate the Size of Wires. The Different Methods of Wiring, with Diagrams. How to Apply the Simple Formula, in Calculating the Size of Wires Under all Conditions. Diagrams for Wiring 3 Point, 4 Point, Head Light and Heat Regulating Switches.
27 TABLES ON WIRING AND VALUABLE DATA.

Ohm's law is described in such plain and simple language that one cannot fail to clearly understand it.

Bound in Cloth, 80 Pages, Size 5x7½ in. Sent, prepaid, on receipt of price, $1.00.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

LUIS JACKSON,
Industrial Commissioner, C., M. & St. P. R'y,

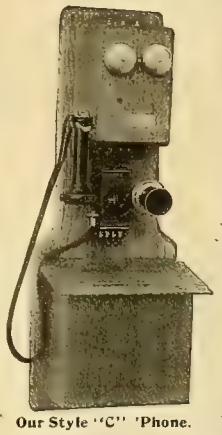
The Victor Apparatus Is Fully Protected by Patents.



Our Style "C" 'Phone.

Our Style "C" 'Phone

is particularly adapted for exchange work. It is equipped with powerful generator, the Victor Double Pole Receiver and solid back transmitter and is unquestionably the finest, most efficient and durable instrument on the market to-day. We guarantee our apparatus.

Our Style "K" 'Phone.

Our Style "K" 'Phone

is especially adapted for long-distance and toll line work. It is provided with powerful generator and ringer, long-distance arm transmitter and double-pole receiver, an instrument of merit and fully equal to any service for which it may be desired. We guarantee our apparatus. We make 'phones of every description.

The Victor Express Switchboard

has no wires running into the back of jacks; all others have from three to six. This board is the most satisfactory ever offered to the telephone public. It is durable and simple, containing no useless trappings or superficial parts. It is durable and simple in construction, easy and rapid to operate and inexpensive to maintain. All parts are interchangeable and accessible without interfering with other parts or interruption of operation. This board is built in sections of five drops and jacks, mounted on hard rubber, invisibly wired and so constructed that when assembled it has the appearance and in fact is one solid front. Each subscriber has an individual ringing key, and the gravity drop used is a special feature owing to its positive action and easy restoration.

Front View Showing 5 Sections Drops and Jacks.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.
This book describes the construction of the various forms of transmitting and receiving devices, the signaling mechanisms, and the switchboard apparatus at the central station. It is written by two well-known electricians, and has the merit of being the latest work on the subject.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view, it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManmon, edited by Prof. C. H. Haskins. Sixth edition. 16mo, 50 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Second edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pages. 333 illustrations. Price $4.50.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. The purpose for which this book is written is to furnish information to those who may desire to construct or use telephone apparatus or lines on a small scale. Price $1.00.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp., 168 illustrations. Price $2.00.

TELEPHONE SYSTEMS ON THE CONTINENT OF EUROPE. By Bennett. 436 pages. 169 illustrations. Price $4.50.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

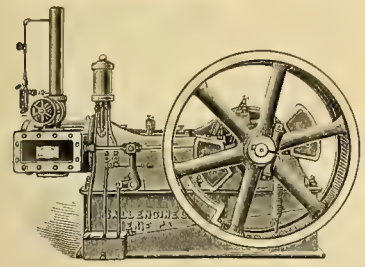
MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pages. 23 illustrations. Price $1.00.

BELL'S ELECTRIC SPEAKING TELEPHONE. Its Invention, Construction, Application, Modification and History. By Prescott. New edition, revised and enlarged. 795 pages. 516 illustrations. Price $4.00.

PHILIPP REIS, INVENTOR OF THE TELEPHONE. A Biographical Sketch with Documentary Testimony. By Thompson. Translation of the original papers of the inventor and contemporary publications. 182 pages. 2 plates and 48 engravings. Price $3.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pages. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Works Published, Sent on Receipt of Price.
ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG. CHICAGO.



We build Horizontal and Vertical, Simple and Compound, Medium and High Speed Engines. They embody all modern requirements, and are unequaled for electric lighting. The workmanship and materials are of the highest quality, and the engines excel in economy, simplicity, durability, and regulation.

A VALUABLE NEW WORK.

ELECTRICIANS' HANDY-BOOK

OF USEFUL INFORMATION.

Edited by A. E. WATSON, A. M., Teacher of Electricity, Brown University, Providence, R. I.
Compiled by E. T. BUBIER, 2d.

ILLUSTRATED.

A Compilation from the works of Sylvanus P. Thompson, Kapp, Allsop, Munroe and Jamieson, Watson, Bottone, Bonney, Watt, Poole, Trevert, Haskins, Morrow and Reid, and others.

This book gives a large number of receipts for making Battery Fluids, Battery Pastes, Insulating Materials and Varnishes, Electro-Plating Solutions, etc. Tells how to make Electric Batteries, Bells, Telephone, Motors, Dynamos, Induction Coils, Influence and Static Machines, etc. Gives formulæ for winding Dynamos, Motors, Armatures, Field Magnets, Transformers. Contains many Rules, Tables, Data, etc. In fact it is almost a complete cyclopædia of Electricity. It is neatly bound and of a convenient size to be carried in the pocket for handy reference.

CONTENTS.

PART		PART	
1.	History.	9.	Electric Lighting.
2.	Theory.	10.	Transformers.
3.	Measurements. (Electric and Magnetic.)	11.	Wiring for Electric Power.
4.	Electric Batteries.	12.	Wiring for Bell Fitting and Gas Lighting
5.	Electro-Chemistry and Metallurgy.	13.	Electric Railways.
6.	The Telegraph and Telephone.	14.	Miscellaneous.
7.	Dynamos and Motors.	15.	Useful Tables.
8.	Management of Dynamos and Motors.	16.	Logarithms.

Contains over four hundred and fifty pages and many illustrations.

PRICE, CLOTH, ONLY $2.50; POSTPAID.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

NOTICE.

TO THOSE INTERESTED IN ELECTRIC LIGHTING.

If you haven't read Buckley's "ELECTRIC LIGHTING PLANTS; THEIR COST AND OPERATION," you should order a copy at once. It is the only work of its kind in print and will prove an inseparable companion. It is just the book thousands of men have been waiting for; it will be what you want. 275 pages. Illustrated. Cloth, $2.00. Paper cover, $1.00. Postage free.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X: Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

We have the Largest and Most Complete Electrical

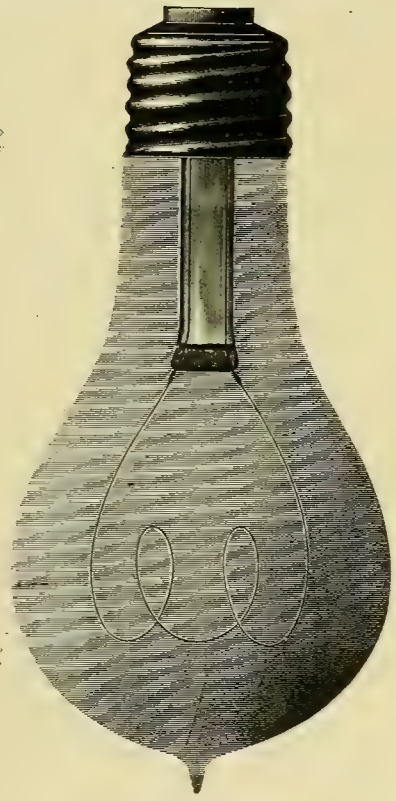
REPAIR SHOPS

In the West. **ELECTRICAL REPAIRS AND MACHINE WORK OF EVERY DESCRIPTION. In having your repair work done by a company operating hundreds of dynamos and motors you are sure of good work and get the benefit of our experience.**

CHICAGO EDISON COMPANY,

76 MARKET STREET, CHICAGO.

EDISON, JR. IMPROVED INCANDESCENT LAMP.



Vacuum Highest Improved. Concentrated, Brilliant White Light. Carbons Never Become Red. Standard Candle Power.

No Electrician who consults the interests of his patrons will use the old-fashioned kind since the advent of the EDISON, JR.

Although greatly superior, the prices of these Lamps have not been increased.

ILLINOIS ELECTRIC CO., Agents,
239 Madison Street, CHICAGO.
General Electrical Supplies.

Alternating Current Desk and Ceiling Fans.

PERFECT MECHANICAL CONSTRUCTION, HIGHEST ELECTRICAL EFFICIENCY.

THE EMERSON ELECTRIC MFG. COMPANY,
ST. LOUIS, MO., U. S. A.

Automatic Time Switches

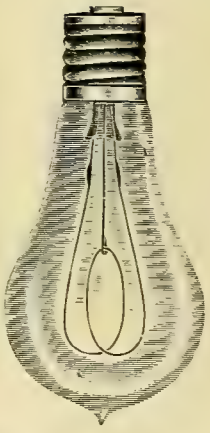
—FOR CONTROLLING—

ELECTRIC LIGHTS and POWER CIRCUITS.

Entirely Automatic and Absolutely Reliable. Also

ARC CUT-OUTS for High Tension Arc Circuits. The BEST APPLIANCES of the Kind are Manufactured by

THE CLEVELAND ELECTRIC CO.,
Corner High and Middle Sts., CLEVELAND, O.
WRITE FOR BULLETINS AND PRICE.



IF YOU KNOW

WHAT IS TO YOUR BEST ADVANTAGE YOU WILL

BUY BEACONS.

WHY?

BECAUSE THEY ARE GUARANTEED TO AVERAGE A MAINTENANCE OF INITIAL C. P. AT STANDARD EFFICIENCY FOR OVER 300 HOURS, AND TO HAVE AN AVERAGE LIFE OF OVER 600 HOURS.
MULTIPLE SERIES FOR ALL CIRCUITS, MINIATURES, ETC.

BEACON LAMP CO.,
New Brunswick, N. J.

PEOPLES' ELECTRIC MFG. CO.,

ELECTRICAL ENGINEERS AND CONTRACTORS,

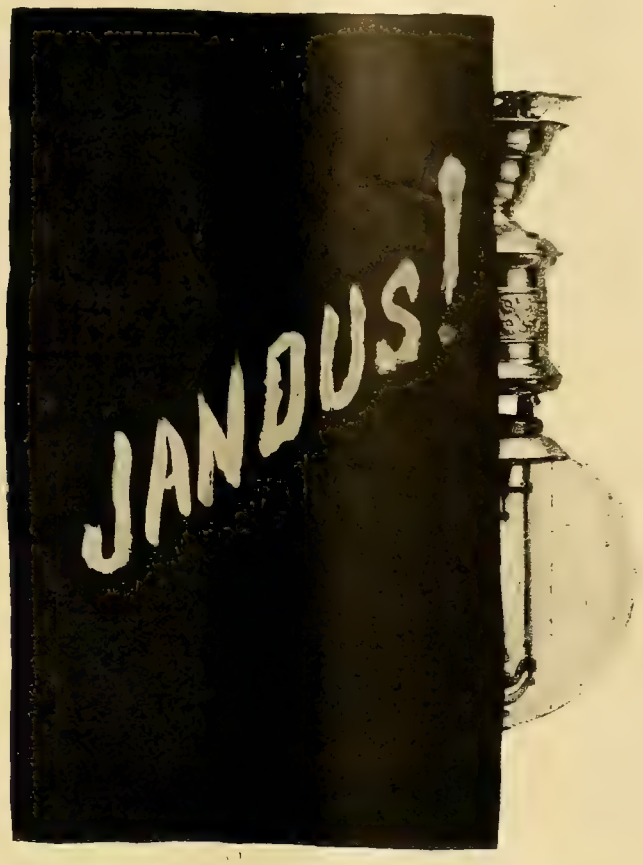
—And Manufacturers of—

Open and Enclosed Arc Lamps

FOR SERIES, ALTERNATING AND DIRECT CURRENT.

Dynamos and Motors. Switchboards. Panelboards.

Factory: Ocean Ave. and South St., BROOKLYN HILLS, L. I.



BEHIND THIS NAME

You will find the

Best Enclosed

Alternating
Constant Potential
Constant Current
Railway and Power

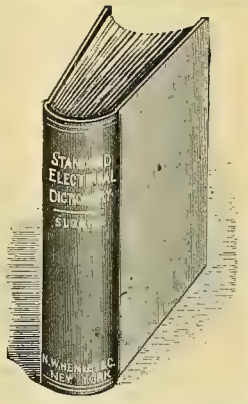
REMINGTON TYPEWRITER

The only machine that embodies all of the experience achieved in the making of writing machines. It began at the beginning and led the way up to the utmost perfection of mechanism yet attained, i. e., to the Remington Models Nos. 6, 7, and 8 (wide carriage).

WYCKOFF, SEAMANS & BENEDICT
244 MADISON ST., CHICAGO.



Standard Electrical Dictionary.

BY PROF. T. O'CONOR SLOANE.
Author of "Arithmetic of Electricity," "Electricity Simplified," "Electric Toy Making," Etc.

682 Pages, 393 Illustrations. Handsomely bound in cloth, 8vo, $3.

An Entirely New Edition, Brought Up to Date and Greatly Enlarged.

COMPLETE—CONCISE—CONVENIENT.

In publishing the "Standard Electrical Dictionary," the author has adhered to what the work purports to be, exhausting the subject of electrical terms, giving each title the clearness of explanation necessary to make the understanding of it complete without unnecessary elaboration. In this work, every electrical word, term, or phrase will be found intelligently defined.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in any way interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact, it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., Chicago.

THE SKINNER AUTOMATIC

Self-Adjusting Slide Valve.

Five years' guarantee not to leak or require attention.

One-Half Per Cent. Regulation.

Inspector Boston Fire Underwriters' Union says:
"A thoroughly reliable and desirable wire in every respect."

The Clark wire has been before the public and in use for the past ten years, and has met with universal favor. We guarantee our insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class insulated wire. We shall be pleased to mail Catalogues, with terms and discounts for quantities.

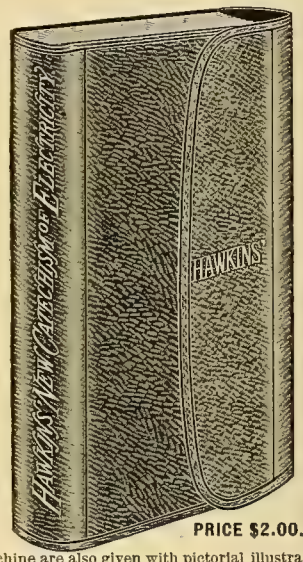
HAWKINS' NEW CATECHISM OF ELECTRICITY.

Plan of the Work, Contents, Etc.



PRICE $2.00.

The New Catechism of Electricity will be found to be surprisingly plain, and free from useless and ambiguous terms. The plan upon which it is arranged is unique.

The book is, first of all, intended to be plain and instructive; some 300 illustrations have been introduced, so that the mere pictures will afford almost a knowledge of the subjects.

It is a school book from the manner in which it proceeds from the simple facts to the abstract principles which the facts indicate; it is also a book of reference through the index of seventeen double columns of fine type pages; by means of this index a thousand items of practical importance are at once available.

It is an up-to date work, which has cost a large outlay of capital and time, and, in short, it is doubtful if any more attractive book has ever been issued—or one more useful.

The subjects treated upon are as follows: Dedication to Thomas A. Edison, with engraving of Mr. Edison; Preface and Introduction; Nature and Source of Electricity and Magnetism.

The Dynamo; Conductors and Non-Conductors; Symbols, abbreviations and definitions relating to electricity; Parts of the Dynamo; The Motor; The Care and Management of the Dynamo and Motor.

Electric Lighting; Wiring; The rules and requirements of the National Board of Underwriters in full; Electrical Measurements.

The Electric Railway; Line Work; Instruction and Cautions for Linemen and the Dynamo Room; Storage Batteries; Care and Management of the Street Car Motor; Electro Plating.

The Telephone and Telegraph; The Electric Elevator; Accidents and Emergencies, etc., etc.

The full one-third part of the whole work has been devoted to the explanation and illustrations of the dynamo, and particular directions relating to its care and management;—all the directions are given in the simplest and most kindly way to assist rather than confuse the learner. The names of the various parts of the machine are also given with pictorial illustrations of the same.

In the Catechism no less than 25 full page illustrations have been given of the various dynamo machines made in different parts of the country, and an equal number of part page illustrations.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

LUIS JACKSON,
Industrial Commissioner, C., M. & St. P. R'y,
450 Old Colony Building CHICAGO, ILL.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers, Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers.
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines: The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

Important Telephone Books.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a complete treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.
This book describes the construction of the various forms of transmitting and receiving devices, the signaling mechanisms, and the switchboard apparatus at the central station. It is written by two well-known electricians, and has the merit of being the latest work on the subject.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view, it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Sixth edition. 16mo, 50 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Second edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pages. 333 illustrations. Price $4.50.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. The purpose for which this book is written is to furnish information to those who may desire to construct or use telephone apparatus or lines on a small scale. Price $1.00.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp., 168 illustrations. Price $2.00.

TELEPHONE SYSTEMS ON THE CONTINENT OF EUROPE. By Bennett. 436 pages. 169 illustrations. Price $4.50.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pages. 23 illustrations. Price $1.00.

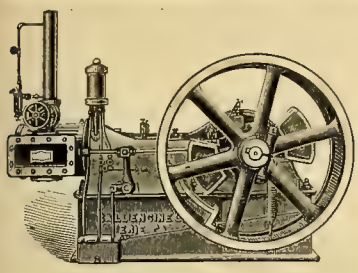
BELL'S ELECTRIC SPEAKING TELEPHONE. Its Invention, Construction, Application, Modification and History. By Prescott. New edition, revised and enlarged. 795 pages. 516 illustrations. Price $4.00.

PHILIPP REIS, INVENTOR OF THE TELEPHONE. A Biographical Sketch with Documentary Testimony. By Thompson. Translation of the original papers of the inventor and contemporary publications. 182 pages. 3 plates and 48 engravings. Price $3.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pages. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Works Published, Sent on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 MARQUETTE BLDG. CHICAGO.



We build Horizontal and Vertical, Simple and Compound, Medium and High Speed Engines. They embody all modern requirements, and are unequaled for electric lighting. The workmanship and materials are of the highest quality, and the engines excel in economy, simplicity, durability, and regulation.

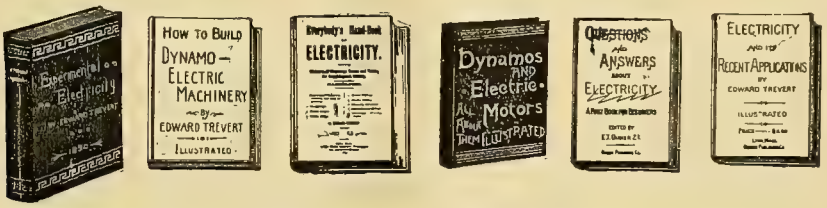
Popular Books for Students of Electricity.



Everybody's Hand Book of Electricity.

With a glossary of electrical terms and tables for wiring. By Edward Trevert. 120 pages, 50 illustrations. Cloth, 12mo., 50 cents. Paper, 25 cents.

Dynamos and Electric Motors.

And all about them. By Edward Trevert. Cloth 12mo. 50 cents.

Electricity And Its Recent Applications

By Edward Trevert. A book complete on all subjects of electricity. Price, 2.00

Electric Railway Engineering.

Embracing practical hints upon power-house dynamos, motor, and line construction. By Edward Trevert. Cloth, 12mo. $2.00

Electric Motor Construction for Amateurs.

By Lieut. C. D. Parkhurst. 16mo., 115 pages, illustrated, cloth. Price, $1.00
An excellent little book, giving working drawings.

Practical Handbook of Electro-Plating.

By Edward Trevert. 75 pages, limp cloth, 50c.

Hand Book of Wiring Tables.

For arc, incandescent lighting and motor circuits. By A. E. Watson. Price, 75 cents.

A Treatise on Electro-Magnetism.

By D. E. Connor, C. E. This is a very interesting book which everybody should read. Cloth, 50 cents.

How to Make & Use the Storage Battery.

Py P. B. Warwick. Illustrated with full working drawings, including directions for installing and maintaining Storage Battery Plants. Price, $1.50.

How to Build Dynamo-Electric Machinery.

A complete and practical work on this subject. 350 pages, numerous illustrations. By Edward Trevert. With working drawings. $2.50

Questions & Answers about Electricity.

A first book for students. Theory of electricity and magnetism. Edited by Edward T. Bubier, 2d. Cloth, 12mo. 50 cents

Experimental Electricity.

By Edward Trevert. Tells how to make batteries, bells, dynamos, motors, telephones, telegraphs, electric bells, etc. A very useful book, finely illustrated. Cloth. Price, $1.00

How to Make and Use a Telephone.

By Geo. H. Cary, A.M. A thorough and practical work on this subject. Cloth, illustrated. Price, $1.00

Arithmetic of Magnetism & Electricity.

Up to date. The latest and best book on the subject. Now ready. By John T. Morrow, M. E., and Thorburn Reid, M. E., A. M., Associate Members, American Institute of Electrical Engineers. $1.00

Electricity for Students.

By Edward Trevert. Fully illustrated. Bound in a neat cloth binding. Price, Postpaid, $1.00

How to Build A Fifty Light Dynamo

Or Four H. P. motor, By A. E. Watson. Cloth. Price, 50 cents.

Armature and Field Magnet Winding,

By Edward Trevert, giving both the theory and practical directions for winding dynamos and motors. Cloth. Price, $1.50.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors; General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X; Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

Chloride Accumulators

IN RESIDENTIAL PLANTS.

Rhinecliff, Dutchess Co., N. Y., Aug. 2nd, 1898.
THE ELECTRIC STORAGE BATTERY CO., New York.
Gentlemen: The battery which you installed for us in October, 1896, has been in constant operation ever since, giving splendid satisfaction. It is of 720 Amp. hour capacity and we have frequently taken over 800 Amp. h'rs from it for electric lighting. It is very remarkable but true that after the hard service sometimes required of it there is no visible deterioration. The battery has given absolutely no trouble whatever, the only care required being to charge and discharge, and occasionally replace evaporation. Yours very truly,
C. H. VAN WERT, JR., Chief Engineer.

New York, July 18, '98.
THE ELECTRIC STORAGE BATTERY CO., New York.
Gentlemen: In answer to your inquiry as to how we are satisfied with the storage battery of 58 cells installed by your Company at the White Plains residence of Mr. Whitelaw Reid, will say that battery has been in constant use every day for 3 yrs. and 10 mos., and it has done all you said it would. Battery has not cost us one cent for any purpose since it was put in and has required but very little attention.
Very respectfully,
JAS. A. STILLMAN,
Ch. Engr. Tribune Bldg.

BERGMANN

STEWART ELECTRICAL CO.,

CINCINNATI, OHIO.

Everybody Knows Stewart.

Write us for prices on anything in the following list or any other machinery wanted. This list comprises a few of our large stock.

Generators, 500 volt.
One T.-H. class 16, 40 k. w.
Two Edison No. 20, 60 k. w.
Four Edison No. 32, 100 k. w.
Two T.-H. m-p., 75 k. w.

Dynamos
Two 200 light, 16 c. p., 110 volt.
One 100 light, 16 c. p., 110 volt.
Two 2,000 c. p. T.-H. L. D. 2, 35 light.
One 2,000 c. p. Standard, 40 lt.
One 3,000 c. p. Brush, 1 lt.
One 10 ampere Wood, 3 lt.

Motors, 500 volt.
One ½ h. p. Keystone.
One 1 h. p. T.-H.
Two 7½ h. p. T.-H.
One 10 h. p. Eddy.
One 25 h. p. Brush.
One 50 h. p. T.-H.

Motors, 220 volt.
One 5 h. p. Varwick.
One 7½ h. p. Mather.
One 10 h. p. Daft.
One 15 h. p. Eddy.
One 16 h. p. Edison.

The above are second-hand, in good condition.

NEW AND SECOND HAND

FOR SALE QUICK, 34 street cars, both open and closed, equipped each with pair No. 6 Edison motors at $200 per car.

Dealers in and Repairers of **ELECTRICAL MACHINERY.**

Monarch Lamps

Have been for the past six years well and favorably known.

They always maintain their high standard. Write for prices.

WESTERN ELECTRICAL SUPPLY CO.,

REWIRED WITH RAVEN WHITE CORE WIRE.

—OFFICE—

The Ferris Wheel Co.

1131 THE ROOKERY.

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is v ry much exposed and the test will no doubt be a most severe one.

Yours very truly,
THE FERRIS WHEEL CO.
By L. V. Rice, Mgr.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

LUIS JACKSON,
Industrial Commissioner, C., M. & St. P. R'y,
450 Old Colony Building CHICAGO, ILL.

"The UNDER Dog Generally Howls" (INFRINGEMENT).

That is the reason our Cleveland competitor is suing us for **alleged infringement,** and one of our patrons for **selling our apparatus, both** of which suits we are **defending at our own expense,** as we will **defend** any of our customers who are sued for using or selling our apparatus.

WHY don't they sue **more** of our customers?
WHY haven't they put up a **bond to secure injunction?**
Ask yourselves these questions and see how **easily** you can answer them.

INDEPENDENT TELEPHONE FIELD.

The highest commendation that we could ask is the fact that other manufacturers are endeavoring to copy our apparatus.

This is a public acknowledgment of its superiority and merit.

SWITCHBOARDS, DISTRIBUTING BOARDS, CABLE TERMINALS, PROTECTORS AND LINE FUSES.

STERLING ELECTRIC CO.,

71-73 W. ADAMS STREET, CHICAGO.

They Are Afraid to Meet Us on Equal Ground of Merit, Quality and Price.

As has been the custom in the telephone business for the last few years whenever a company has goods of superior merit, some short horse commences to squeal, and it is self-evident those who squeal the loudest must be hit the hardest.

Our competitors, not being able to meet us on **Merit, Price** and **Quality**, are attempting a bluff by suing us upon the celebrated, latest up-to-date Williams single core ringer, which magneto we are placing upon all of our telephones. We have called their Bluff and will Prove to their entire satisfaction, before many moons, that their methods are the wrong way and **ours the right.**

When it comes to **Prices, Quality** and **Merit** we throw down the gauntlet and defy them.

We are placing upon the market only the very best.

We protect you in the use of the same, and, last but not least, we make you **right prices.**

Investigate our apparatus. **Get our prices and catalogues.**

THE PELTON WATER WHEEL CO.

Gives exclusive attention to the development and utilization of water powers by the most modern, economic and improved methods.

An experience of more than fifteen years, involving both the theory and practice of hydraulic engineering as relates to power development in its widest range of application, is at the service of its customers

NINE THOUSAND WHEELS NOW RUNNING
Aggregating some 700,000 h. p.

ELECTRIC POWER TRANSMISSION

Pelton Wheels afford the most reliable and efficient power for such service, and are running the majority of stations of this character in the United States, as well as most foreign countries.

Highest efficiency and absolute regulation guaranteed under the most extreme variations of load. Catalogues furnished on application.

Address, PELTON WATER WHEEL COMPANY,
143 Liberty St., New York City, U. S. A. or 121 Main St., San Francisco, Cal., U. S. A.

WATER WHEELS

For all Heads from 3 Ft. to 2000 Ft.
Especially adapted to all kinds of
ELECTRIC POWER AND LIGHTING PLANTS.

Recent tests at Holyoke enable us to guarantee:
The Largest Power ever obtained from a wheel of the same diameter. The highest speed ever obtained for the same power. The highest mean efficiency ever realized when running from half to full gate. We guarantee also: *A runner of the greatest possible strength. A gate unequaled in quickness and ease of opening and closing. Tests show over 81 per cent. average efficiency with half to full water.*

State your Head and send for 124 page pamphlet.
JAMES LEFFEL & CO., Springfield, Ohio, U. S. A.

DIXON'S BELT DRESSING
AND LEATHER PRESERVATIVE.
Is guaranteed to prevent slipping and to preserve the leather.
It will pay you to send for circulars and testimonials.
JOS. DIXON CRUCIBLE CO., JERSEY CITY, N. J.

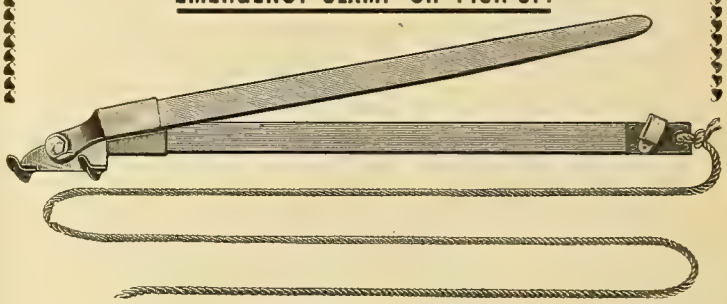
OF INTEREST TO Superintendents of Electric Railways.

TROLLEY WIRE.

EMERGENCY CLAMP OR PICK-UP.



PATENTED JAN. 12, 1897.

The above illustration shows our Emergency Clamp or Pick-up, used to handle broken Trolley or other live wires. The handles are made of hard wood, which gives perfect insulation, and with each clamp twenty feet of rope is furnished, which, being attached to handle, enables man in charge to place broken wire where it will be harmless until linemen can place it in its proper position. One of these clamps on each car would save the company many times its cost. Made with or without wire cutter.

Our Price Will Interest You.

For Alphabetical Index of Advertisements See Page III.

The "ELECTRA" Highest Grade Nuernberg Carbons are recognized as standard all the world over.

All genuine "ELECTRA" carbons are put up in packages bearing the label with the trade mark "ELECTRA."

Good carbons mean less cost for current.

All the excellence in dynamos and arc lamps counts for but little where poor carbons are used in lamps.

COLUMBIA CARBONS

For Enclosed Arcs.

As COLUMBIA is the gem of the ocean, so is the "COLUMBIA" the gem of Enclosed Arc Carbons.

MANUFACTURED BY

THE NATIONAL CARBON CO.

THE "CLARK" WIRE.

FOR SWITCHBOARD. RAILWAY and MOTOR USE.

All sizes of Stranded and Flexible Wire and Cables with Clark's Insulation

Inspector Boston Fire Underwriters' Union says:
"A thoroughly reliable and desirable wire in every respect."

The Clark wire has been before the public and in use for the past ten years, and has met with universal favor. We guarantee our insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class insulated wire. We shall be pleased to mail Catalogues, with terms and discounts for quantities.

Winders direct from T.-H. and Westinghouse shops. Work guaranteed. Ten years' experience. Light plants installed complete. Send for prices.

HODGE, WALSH & LORING,
701 Delaware St., KANSAS CITY, MO.

FOR SALE.

One-fourth interest in paying electric-light plant that cost $23,000 three years ago; if sold soon will take $8,500 cash for my interest and resign my position as superintendent in favor of purchaser. Address "H," care WESTERN ELECTRICIAN.

FOR SALE.

Electric-light plant, all or one-half interest to an electrician or good engineer who can run the plant. Is paying 2 per cent. on cost. For particulars, etc., Address CHANUTE ELECTRIC LIGHT & POWER CO., Chanute, Kans.

PROPOSALS FOR ELECTRIC LIGHT PLANT

Department of the Interior, Office of Indian Affairs, Washington, D. C., Nov. 19, 1898.—Sealed proposals, indorsed "Proposal for Electric Light Plant, Mt. Pleasant School, Mich.," and addressed to the Commissioner of Indian Affairs, Washington, D. C., will be received at this office until one o'clock, p. m., of Tuesday, Dec. 20, 1898, for furnishing and delivering the necessary materials and labor required in the construction and completion of an electric light plant at the Indian Industrial School, Mt. Pleasant, Mich., in strict accordance with plans, specifications and instructions to bidders, which may be examined at this office; the U. S. Indian Warehouse, No. 1602 State st., Chicago, Ill.; the Builders' and Traders' Exchange, Omaha, Neb.; the office of the "State Republican," of Lansing, Michigan, and at said school.

For any additional information apply to this office or E. S. Graham, Superintendent, Mt. Pleasant, Mich. W. A. JONES, Commissioner.

A Piano at a Nominal Price.

Chicago's largest music house, Lyon & Healy, has just bought for a fraction of its cost, the entire stock of Lyon, Potter & Co. These splendid pianos are offered without reserve. In this stock are about 100 new Steinway pianos, and hundreds of new and second-hand pianos including these well-known makes, Steinway, Sterling, Chase, Fischer, Weber, Chickering, Lyon, etc. In square pianos there are fine-toned instruments at $25 and upwards. In Upright Pianos neat instruments at $100, $120, $140, $150, $165, $190, $200 and upwards. Baby Grands at $250 and upwards. Nearly all these pianos were intended to sell for at least double these clearing sale prices. This is an opportunity that has never occurred before and will not occur again, as the firm of Lyon, Potter & Co. carried one of the finest piano stocks in the world. Immediate attention is therefore necessary. A good plan would be to order a piano, stating about what you would like but leaving the selection to Lyon & Healy. However they will send a list and full particulars upon application. Any piano not proving satisfactory may be returned at their expense. Address Lyon & Healy, Chicago. Distance is no obstacle in taking advantage of this remarkable chance to obtain a piano at a nominal price, for in proportion to the saving, the freight charges are insignificant. If you do not already know Lyon & Healy's standing, any banker will assure you of their responsibility and record of over a third of a century for honorable dealing. Write to-day so as to avoid disappointment, and kindly mention this publication.

PLATINUM

For all Purposes.
Scrap and Native Platinum Purchased.
BAKER & CO., 408-414 New Jersey Railroad Ave., Newark, N. J.

Manufacturers and others

needing Clean, Solid Copper Castings, 99½ per cent pure, Cast Tempered Copper, Phosphor Manganese, Aluminum and all of the other Bronzes, Brass (all grades), Aluminum, Gun, Bell Metal, etc., Dynamo, Motor, Engine and Machine Bearings and other things.

Want to hear from you. Want to furnish you castings, completed parts ready to assemble, or completed article itself. Nothing in above mentioned metals we can't make. We're fully equipped. Now's a good time to make contract. Send pattern, sample or drawing. Write

—OFFICE—
The Ferris Wheel Co.
1131 THE ROOKERY.

CHICAGO, April 30, 1896.

NEW YORK INSULATED WIRE CO.,
320 Dearborn St., Chicago, Ill.

GENTLEMEN:—After carefully considering the merits of the various brands of wire upon the market, we have decided to use your "Raven White Core" exclusively for rewiring the Ferris Wheel.

As you are aware, the wire upon the wheel is very much exposed and the test will no doubt be a most severe one.

Yours very truly,

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

LUIS JACKSON,
Industrial Commissioner, C., M. & St. P. R'y,

The highest commendation that we could ask is the fact that other manufacturers are endeavoring to copy our apparatus.

This is a public acknowledgment of its superiority and merit.

SWITCHBOARDS, DISTRIBUTING BOARDS, CABLE TERMINALS, PROTECTORS AND LINE FUSES.

STERLING ELECTRIC CO.,

71-73 W. ADAMS STREET, CHICAGO.

THE BEST IS NONE TOO GOOD FOR YOU, AND YOU GET THE BEST FROM US.

The specifications of our instruments when closely followed by telephonists will convince the most expert that we are placing upon THE market THE VERY BEST.

The following are general specifications of our telephones:—Our Magnetos are of the celebrated Williams type bridging and series with differential corrugated gear and single-core ringers.

THIS MAGNETO is far in advance of any instrument of its type upon the market. Our INDUCTION COILS have fibre ends with screw burr terminals, are silk wound, and are beyond question the finest coil placed upon the market. Our SOLID BACK EUREKA TRANSMITTERS are most powerful and efficient, and for volume and clearness of articulation have no equal. Our new ADJUSTABLE DOUBLE POLE metal end, hard rubber case receivers will satisfy the most expert that there are none better.

After building the above high grade parts they are built together by expert mechanics, and when completed we offer to you a telephone that is not equaled in price and not touched by any competition.

We will be pleased to forward our catalogues illustrating more fully the above-described telephones, also switchboards, cross connecting boards, lightning arresters and parts. We guarantee our goods to be of the highest grade and latest types.

THE BEST ANSWER TO A QUESTION

On Wiring, can be found in the New Book,

"WIRING TABLES,"

"How They are Made and How to Use Them."

BY THOS. C. CRIER.

Whenever you are asked a question on Wiring, refer the questioner to this book, and he will find what he desires.

THE BOOK CONTAINS: The Law of Resistance, Electromotive Force and Current Fully Explained. How to Calculate the Size of Wires. The Different Methods of Wiring, with Diagrams. How to Apply the Simple Formula, in Calculating the Size of Wires Under all Conditions. Diagrams for Wiring 3 Point, 4 Point, Head Light and Heat Regulating Switches.
27 TABLES ON WIRING AND VALUABLE DATA.

Ohm's law is described in such plain and simple language that one cannot fail to clearly understand it.

Bound in Cloth, 80 Pages, Size 5x7½ in. Sent, prepaid, on receipt of price, $1.00.

ELECTRICIAN PUBLISHING CO., 510 Marquette Building, **CHICAGO.**

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$3.50.**
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1.25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Sent Prepaid on Receipt of Price.

Westinghouse Methods

In Electrical Engineering are accepted as standard practice throughout the world. Their position as the foremost builders of Electrical Machinery and their experience in producing the largest electrical plants ever constructed has secured for them the confidence of the electrical fraternity. "The name of Westinghouse is a guarantee" that whatever is associated with it is best.

The Westinghouse systems of direct and alternating current transmission of power for mills and factories have been tested in almost every line of industry. Under the most trying conditions our Type "C" Motor has surpassed all expectations and has demonstrated our claims that it is ideal in construction.

REGISTERED SEPTEMBER 11, 1894.

Chloride Accumulators

IN RESIDENTIAL PLANTS.

Rhinecliff, Dutchess Co., N. Y., Aug. 2nd, 1898.
THE ELECTRIC STORAGE BATTERY CO., New York.
Gentlemen: The battery which you installed for us in October, 1896, has been in constant operation ever since, giving splendid satisfaction. It is of 720 Amp. hour capacity and we have frequently taken over 800 Amp. h'rs from it for electric lighting. It is very remarkable but true that after the hard service sometimes required of it there is no visible deterioration. The battery has given absolutely no trouble whatever, the only care required being to charge and discharge, and occasionally replace evaporation. Yours very truly,
C. H. VAN WERT, JR., Chief Engineer.

New York, July 18, '98.
THE ELECTRIC STORAGE BATTERY CO., New York.
Gentlemen: In answer to your inquiry as to how we are satisfied with the storage battery of 58 cells installed by your Company at the White Plains residence of Mr. Whitelaw Reid, will say that battery has been in constant use every day for 3 yrs. and 10 mos., and it has done all you said it would. Battery has not cost us one cent for any purpose since it was put in and has required but very little attention.
Very respectfully,
JAS. A. STILLMAN,
Ch. Engr. Tribune Bldg.

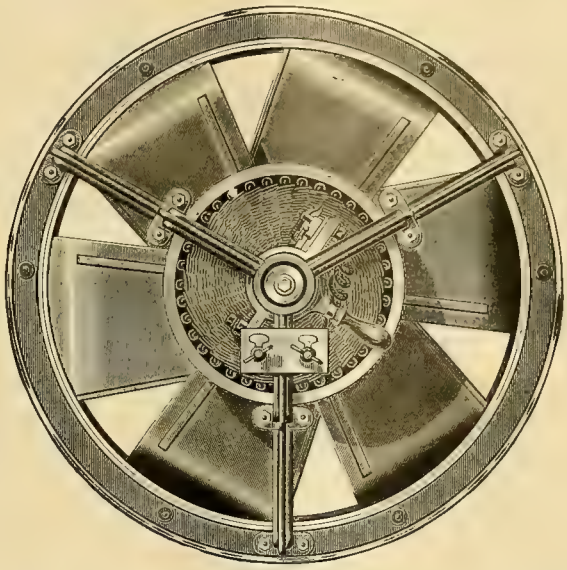
EXHAUST FANS

FOR ALL CIRCUITS, EXCEPT ALTERNATING.

For Theatres, Hospitals, Public Buildings, and All Places where Perfect Ventilation is Desired.



Equipped with Fire-Proof Speed Regulator of the Most Improved Type.

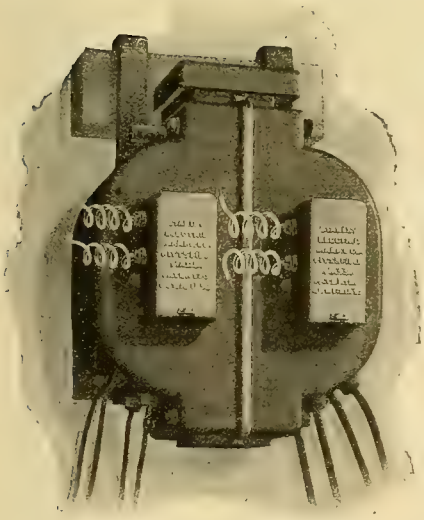
All Fans Directly Connected to Motors.

Catalogue Sent Upon Application.

DIEHL MANUFACTURING CO.,

SHOW ROOMS: 561-563 Broadway, NEW YORK. 128-132 Essex Street, BOSTON. 192-194 Van Buren Street, CHICAGO.

Main Office and Factory: ELIZABETHPORT, N. J.



New Type G Lighting Transformers

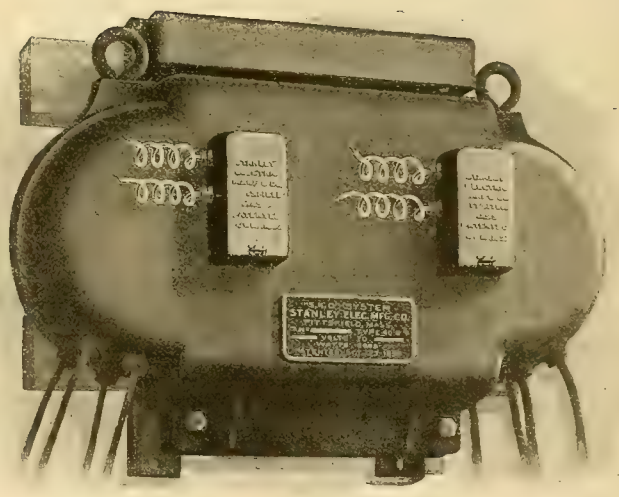
FROM 10 LIGHTS TO 600 LIGHTS CAPACITY

Highest Efficiency Consistent with Closest Regulation

No Ageing of Iron

INTERCHANGEABLE PRIMARIES and SECONDARIES

Fuse Boxes may be used on the Transformer or elsewhere



S. K. C. Transformers—Full Stock Carried in Chicago of all Sizes for Immediate Shipment.

Transformers for any Purpose and Voltage.

KNOWLEDGE IS POWER.

Everyone engaged in the electrical business should keep posted on the developments in the art by reading the latest books on the subject. We are headquarters in the West for electrical books and can fill orders for any work published, promptly on receipt of price. We call your special attention to the following standard books:

Allsop, F. C.—Electrical Bell Construction; Treatise on the Construction of Electric Bells, Indicators, and similar apparatus. 177 illustrations.....$1.25

Angell, J.—Elements of Magnetism and Electricity, with Practical Instructions for the Performance of Experiments, and the construction of cheap apparatus. One hundredth thousand. 160 illustrations.....$1.00

Atkinson, Philip.—The Elements of Electric Lighting. Seventh edition, fully revised, and new matter added. 104 illustrations. 260 pages.....$1.50

Atkinson, Philip.—The Elements of Dynamic Electricity and Magnetism. 406 pages and 117 illustrations. Second edition.....$2.00

Ayrton, W. E.—Practical Electricity; a Laboratory and Lecture Course for First-year Students of Electrical Engineering, based on the Practical Definitions of the Electrical Units. With numerous illustrations. Sixth edition.....$2.50

Badt, Lieut. F. B.—New Dynamo Tenders' Hand Book. This is, as the name indicates, a **New Book**, much more complete than the old one, with all the information, instructions and rules which are required by practical men, as Dynamo Tenders, Linemen, Stationary Engineers, and owners and operators of all kinds of Electric Plants. It is the only book of the kind published in the English language. 226 pages, 140 illustrations, flexible cloth binding, size of type page 5½x3 inches.....$1.00

Badt, Lieut. F. B.—Incandescent Wiring Hand-book. A timely book containing full illustrations for incandescent wiring and complete information concerning methods of running wires, location of safety devices, splices, insulation, testing for faults, wire gauges, general electrical data, calculating sizes of wires, wiring fixtures, elevators, buildings, isolated and central station plants. The only book of the kind published. Type page 5½x3 inches, flexible cloth binding. 66 pages, 35 cuts and 5 tables, 3 of which are 12x18 inches.....$1.00

Badt, Lieut. F. B.—Bell Hangers' Hand-ook. Just the book for people engaged in selling, installing or handling electric batteries, electric bells, elevators, house or hotel annunciators, burglar or fire alarms, electric gas lighting apparatus, electric heat apparatus. 106 pages, 97 illustrations, flexible cloth binding. Type page 5½x3 inches.$1.00

Badt, Lieut. F. B.—Electric Transmission Hand-book. First edition, three thousand copies. 97 pages, 22 illustrations, 27 original tables.....$1.00
Gives more *Practical* information on the subject than any work published to date The book contains all necessary information for Power Producers, Capitalists, Agents, Engineers and Motor Inspectors. With this book anybody may make estimates on the cost of Transmission Plants.

Bedell, Fred'k and Albert C. Crehore.—Alternating Currents; An Analytical and Graphical Treatment for Students and Engineers. Second edition. 112 illustrations.....$2.50

Blakesley, T. H.—Papers on Alternating Currents of Electricity for the use of Students and Engineers. Third edition, enlarged. 12mo, cloth.....$1.50

Bonney, G. E.—Electro-Plater's Hand Book. A Manual for Amateurs and Young Students on Electro-Metallurgy. 60 illustrations. 208 pages. 12mo, cloth.....$1.25

Bottone, S. R.—Electrical Instrument Making for Amateurs. A Practical Hand-book, with 48 illustrations. Fourth edition. Enlarged by a chapter on the Telephone.....$0.50

Bottone, S. R.—The Dynamo, How Made and How Used. A Book for Amateurs. Eighth edition, with additional matter and 39 illustrations.....$1.00

Bottone, S. R.—Electro-Motors, How Made and How Used. A Handbook for Amateurs and Practical Men. Reduced to $0 50

Bottone, S. R.—How to Manage the Dynamo. A Hand-book for Ship Engineers, Electric Light Engineers and Electro-Platers.....$0.60

Buckley, W. J.—Electric Lighting Plants, their cost and operation. 275 pages, many illustrations and diagrams
Cloth.....$2.00
Paper.....1.00

Cox, Frank P.—Continuous Current Dynamos and Motors. An Elementary Treatise for Students and Engineers. Illustrated.....$2.00

Crocker, F. B., and Wheeler, S. S.—The Practical Management of Dynamos and Motors. With a special chapter by H. A. Foster. Illustrated. Second edition, revised and enlarged.....$1.00

Crosby, O. T., and Dr. Louis Bell.—The Electric Railway in Theory and Practice. A Complete Treatise on the Construction and Operation of Electric Railways, Second edition, revised and enlarged. 183 illustrations.....$2.5(

Desmond, Chas.—Electricity for Engineers Part I. Constant Current. A clear and comprehensive treatise on the principles, construction and operation of Dynamos, Motors, Lamps, Indicator and Measuring Instruments; also a full explanation of the electrical terms used in the work. Part II. Alternate Current Apparatus. Containing an explanation of the principles governing the generation of, and a description of the instruments and machinery used in connection with Alternate Electric Currents. Illustrated. Revised edition.....$2.50

Dyer, A.—Induction Coils. How Made and How Used. Third edition. Boards.....$0.50

Fleming, J. A.—Short Lectures to Electrical Artisans. A course of Experimental Lectures delivered to a Practical Audience. Fourth edition. 74 illustrations.....$1.50

Fleming, J. A.—The Alternate Current Transformer in Theory and Practice. Vol. I. The Induction of Electric Currents, 500 pages, fully illustrated and with copious index. Second edition.....$3.00
Synopsis of contents; Chapter 1. Introductory. 2. Electro-Magnetic Induction. 3. The Theory of Simple Periodic Currents. 4. Mutual and Self Induction. 5. Dynamical Theory of Current induction.
Vol. II. The Utilization of Induced Currents, 8vo. cloth. London, 1892.....$5.00

Gore, G.—The Art of Electro-Metallurgy, including all Known Processes of Electro Deposition. Fourth edition.....$2.00

Gordon.—School Electricity. Sources, Currents, Measurement, Telegraphy, Telephony, Lightning, Electrolysis, Induction, etc. 262 pages, with 140 illustrations.....$2.00

Grier, Thos. G.—Wiring for Motor Circuits. A handy little pamphlet containing tables for wiring and for motor service, arranged in convenient form for ready reference.$1.00

Haskins, C. H.—The Galvanometer and its Uses. A Manual for Electricians and Students. Fourth edition, revised ..$1.50

Haskins.—Transformers. Their Theory, Construction and Application Simplified. 38 illustrations.....$1.25

Hawkins, C. C. and F. Wallis.—The Dynamo, its Theory, Design and Manufacture. 190 illustrations $3.00

Hering.—Practical Directions for Winding Magnets and Dynamos. 12mo. cloth, reprint without additions.....$1.25

Hopkins, Geo. M.—Experimental Science. Elementary, Practical and Experimental Physics, 650 Illustrations $4.00

Hopkinson.—Original Papers on Dynamo Machinery and Allied Subjects. Illustrated.....$1.00

Hopkinson, Dr. John.—Dynamic Electricity; Its Modern Use and Measurement, chiefly in its Application to Electric Lighting and Telegraphy.....$0.50

Hospitalier, E.—Domestic Electricity for Amateurs, Translated from the French. With additions by C. J. Wharton. With illustrations.....$2 50

Houston, Prof. E. J.—A Dictionary of Electrical Words, Terms and Phrases. Third edition, re-written and greatly enlarged. Large 8vo. 562 pages, and 570 illustrations $5.00

Kapp, Gisbert.—Electric Transmission of Energy and its Transformation, Subdivison and Distribution. A practical handbook. Third edition $3.00

Kapp, Gisbert.—Alternate Current Machinery Illustrated.$0.50 [Vol. 96 Van Nostrand's Science Series.]

Kapp, Gisbert.—Alternating Currents of Electricity. Their Generation, Measurement, Distribution and Application. Authorized American ed. With an introduction by William Stanley, Jr. Illustrated.....$1.00

Kapp, Gisbert.—Dynamos, Alternators and Transformers. 138 illustrations.....$4.00

Kempe, H. R.—A Handbook of Electrical Testing. Fifth edition. 200 illustrations. 8vo. cloth. London, 1892....$7.25
In this edition there is a considerable amount of new matter; the old matter has been thoroughly revised.

Kempe, H. R.—The Electrical Engineer's Pocket Book. Modern Rules, Formulæ, Tables and Data. 32mo, leather $1.75

Lockwood, T. D.—Electricity, Magnetism and Electric Telegraphy. A Practical Guide and Handbook of General Information for Electrical Students, Operators and Inspectors. 376 pages, 152 Illustrations.....$2.50

Lockwood, T. D.—Electrical Measurement and the Galvanometer; its Construction and Use. Second edition... $1.50

Lockwood, T. D.—Practical Information for Telephonists. 12mo, cloth. N. Y.....$1.00

Meadowcroft, W. H.—The A. B. C. of Electricity. 36 Illustrations.....$0.60

Martin, T. C.—Inventions, Researches and Writings of Nikola Tesla. With special reference to his work in polyphase currents and high potential lighting. 500 pp. 300 Illustrations, second edition $4.00

Martin, T. C. and Wetzler, J.—The Electric Motor and its Applications. Third edition. With an Appendix on the Development of the Electric Motor since 1888. By Dr. L. Bell. 300 Illustrations.....$3.00

Maver, and Davis, M. M.—The Quadruplex. With Chapters on the Dynamo-Electric Machine in Relation to the Quadruplex. The Practical Working of the Duplex Telegraph Repeaters and the Wheatstone Automatic Telegraph. 63 illustrations $1.5C

McClure, J. B.—Edison and his Inventions, with Full Explanations of the Telephone, Phonograph, Tasemeter, Electric Light and all his Principal Discoveries, etc. .$1.00

Niaudet, Alfred.—Elementary Treatise on Electric Batteries. Translated from the French by L. M. Fishback. Illustrated.....$2.5₀

Noll, Augustus.—How to Wire Buildings. A manual of the art of interior wiring. Illustrated.....$1.50

Pope, Franklin Leonard.—Modern Practice of the Electric Telegraph. A technical Hand-book for Electricians, Managers and Operators. 185 illustrations. 14th edition, rewritten and enlarged.....$1.50

Prindle, H. B.—A Popular Treatise on the Electric Railway of to-day. Fully illustrated.....$0.25

Russell, Stuart A.—Electric Light Cables and Distribution of Electricity. 107 illustrations.....$2.25

Salomons, Sir David.—Electric Light Installations. Vol. 1. The Management of Accumulators. A Practical Hand-book. 7th edition, revised and enlarged. With illustrations. 12 mo, cl. London, 1893.....$1.50

Sloane, T. O'Conner.—Electricity Simplified. The Practice and Theory of Electricity, including a Popular Review of the Theory of Electricity, with Analogies and Examples of its Practical Application in every-day life. Illustrated.....$1.00

Sloane, T. O'Connor.—The Standard Electrical Dictionary. A Popular Dictionary of Words and Terms used in the practice of Electrical Engineering, 350 illustrations.$3.00

Sloane, T. O'Connor.—Electric Toy Making for Amateurs, including Batteries, Magnets, Motors, Miscellaneous Toys $1.00

Sloane, T. O'Connor.—The Arithmetic of Electricity. A Manual of Electrical Calculations by Arithmetical Methods, including numerous rules, examples and tables in the field of practical electrical engineering and experimenting. Third edition, revised.....$1.00

Tesla, Nikola.—Experiments with Alternate Currents of High Potential and High Frequency. A lecture delivered before the Institution of Electrical Engineers, London. With a portrait and biographical sketch of the Author Illustrated.....$1 00

Tesla, Nikola.—Lectures on the Electro-Magnet. Illustrated, ...$1.00

Thurston, Prof. R. H.—Stationary Steam Engines, especially adapted to Electric Lighting Purposes. Treating of the development of Steam Engines, the Principles of Construction and Economy, with description of Moderate and High Speed Engines. With many folding plates.....$1.50

Thomson, Prof. Elihu.—What is Electricity? Illustrated.$0.25

Thompson, Sylvanus P.—Dynamo-Electric Machinery. A Series of Lectures, with an introduction by Franklin L. Pope. 16mo. Numerous illustrations, fancy boards (Van Nostrand's Science Series, No. 66) $0.50

Thompson, Sylvanus P.—Polyphase Electric Currents and Alternate-Current Motors. Mailed to any address in the world on receipt of.....$3.50

Thompson, Sylvanus P.—Recent Progress in Dynamo-Electric Machines, being a Supplement to Dynamo-Electric Machinery. 16mo. (Van Nostrand's Science Series, No. 75).....$0.50

Thompson, Sylvanus P.—Dynamo-Electric Machinery. Fourth edition, revised and rewritten. Numerous illustrations and 29 plates. 1,000 pages.....$6 00

Trevert.—How to Make Electric Batteries at Home. Illustrated.....$0.25

Urquhart.—Electro-Plating. A Practical Hand-book on the Deposition of Copper, Silver, Nickel, Gold, Aluminum, Brass, Platinum, etc. Second edition; carefully revised, with additions.....$2.00

Walker, F.—Practical Dynamo Building, for Amateurs. How to wind for any output. With numerous illustrations. 16mo, boards. (Van Nostrand's Science Series, No. 98).$0.50

Webb, H. L.—A practical Guide to the Testing of Insulated Wires and Cables. Illustrated.....$1.00

Webb, Herbert Laws.—Telephone Hand-book, Illustrated. 12mo, cloth. Chicago, 1895 .....$1.00
The only complete work on the Telephone. All possible information for any one interested in Telephones and how to make and operate them.

The **ORATOR** will.

MANUFACTURED BY
The RAWSON ELECTRIC CO.,
ELYRIA, O., U. S. A.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

LUIS JACKSON,
Industrial Commissioner, C., M. & St. P. R'y,
450 Old Colony Building CHICAGO, ILL.

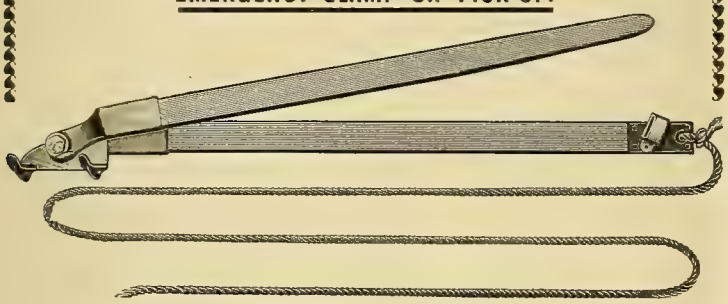
OF INTEREST TO Superintendents of Electric Railways.

TROLLEY WIRE.

EMERGENCY CLAMP OR PICK-UP.



PATENTED JAN. 12, 1897.

The above illustration shows our Emergency Clamp or Pick-up, used to handle broken Trolley or other live wires. The handles are made of hard wood, which gives perfect insulation, and with each clamp twenty feet of rope is furnished, which, being attached to handle, enables man in charge to place broken wire where it will be harmless until linemen can place it in its proper position. One of these clamps on each car would save the company many times its cost. Made with or without wire cutter.

Our Price Will Interest You.

—RAILWAY DEPARTMENT—

WESTERN ELECTRICAL SUPPLY CO.,

10 AND 12 N. NINTH STREET, ST. LOUIS, MO.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$3.50.**
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1.25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

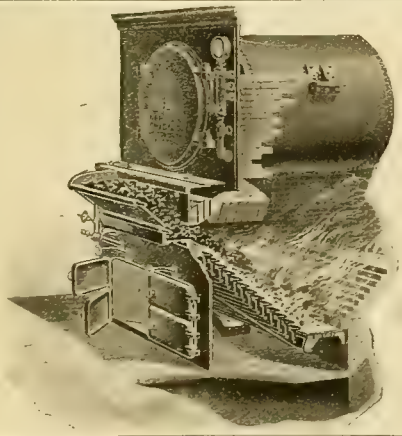
Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents: paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume. 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Sent Prepaid on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.



The Roney Mechanical Stoker

In its present perfected form the result of over ten years' experience, covering the equipment of nearly two thousand furnaces.

Burns any kind of fuel with the highest efficiency. Smokeless combustion; labor saving. Design is such that coal-handling machinery can be conveniently used in connection, rivaling natural gas in cleanliness and convenience.

There are some conditions under which a mechanical stoker is not desirable. We know these conditions, and will not sell except where beneficial results are certain.

Dynamos and Motors. Switchboards. Panelboards.

Factory: Ocean Ave. and South St., BROOKLYN HILLS, L. I.

A MODERN CATALOGUE

A MODERN DISTRIBUTION.

SEND FOR ONE---THE WAGON MAY NOT PASS YOUR WAY!

TO TIGHTEN A BELT

That slips is poor economy, the remedy can only be temporary. We guarantee that a belt full of CLING-SURFACE CANNOT SLIP, and also, that the belts can be run slack, which in itself is a great saving in time, bother, belts and extra friction on bearings. A sample can will prove it.

CLING-SURFACE MFG. CO., 177-182 VIRGINIA STREET, BUFFALO, N. Y.

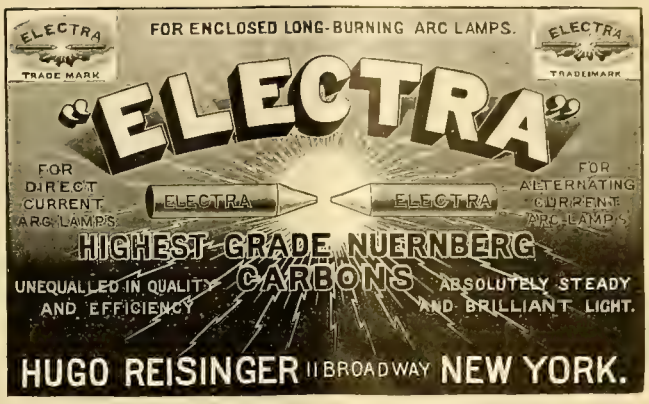
For Alphabetical Index of Advertisements See Page III.

The "ELECTRA" Highest Grade Nuernberg Carbons are recognized as standard all the world over.

All genuine "ELECTRA" carbons are put up in packages bearing the label with the trade mark "ELECTRA."



Good carbons mean less cost for current.

All the excellence in dynamos and arc lamps counts for but little where poor carbons are used in lamps.

COLUMBIA CARBONS

For Enclosed Arcs.

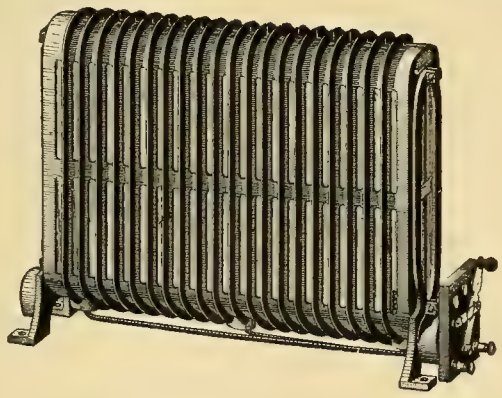
As COLUMBIA is the gem of the ocean, so is the "COLUMBIA" the gem of Enclosed Arc Carbons.

MANUFACTURED BY

THE NATIONAL CARBON CO.

600 HIGHLAND AVENUE, - - - - CLEVELAND, OHIO.

THE W. E. ELECTRIC HEATER.



The ELECTRIC HEATER is extremely valuable in heating small offices, bath-rooms, cold corners, street railway waiting-rooms, and the Summer villa. The heater is perfectly clean, does not vitiate the air, and is portable. It is finished in black enamel and Japan.

THE "CLARK" WIRE.

FOR SWITCHBOARD, RAILWAY and MOTOR USE.

All sizes of Stranded and Flexible Wire and Cables with Clark's Insulation

Inspector Boston Fire Underwriters' Union says:
"A thoroughly reliable and desirable wire in every respect."

The Clark wire has been before the public and in use for the past ten years, and has met with universal favor. We guarantee our insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class insulated wire. We shall be pleased to mail Catalogues, with terms and discounts for quantities.

Important Telephone Books.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.

This handbook is a complete treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.

This book describes the construction of the various forms of transmitting and receiving devices, the signaling mechanisms, and the switchboard apparatus at the central station. It is written by two well-known electricians, and has the merit of being the latest work on the subject.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.

In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view, it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Sixth edition. 16mo, 50 pp. Price 25 cents.

This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Second edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 608 pages. 333 illustrations. Price $4.50.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. The purpose for which this book is written is to furnish information to those who may desire to construct or use telephone apparatus or lines on a small scale. Price $1.00.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp., 168 illustrations. Price $2.00.

TELEPHONE SYSTEMS ON THE CONTINENT OF EUROPE. By Bennett. 436 pages. 169 illustrations. Price $4.50.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pages. 23 illustrations. Price $1.00.

BELL'S ELECTRIC SPEAKING TELEPHONE. Its Invention, Construction, Application, Modification and History. By Prescott. New edition, revised and enlarged. 795 pages. 516 illustrations. Price $4.00.

PHILIPP REIS, INVENTOR OF THE TELEPHONE. A Biographical Sketch with Documentary Testimony. By Thompson. Translation of the original papers of the inventor and contemporary publications. 182 pages. 2 plates and 48 engravings. Price $3.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pages. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Works Published, Sent on Receipt of Price.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois, Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

—THE—

MOTORMAN'S GUIDE,

A PRACTICAL TREATISE

—ON—

Street Railway Motors;

—OR—

How to Become a Practical Motorman.

By J. W. GAYETTY.

Price, = = = = = = = $1.00

CONTENTS.

1. Introduction. 2. Car wiring. 3. How to locate trouble in your car while on the road. 4. How to cut out a motor. 5. Information on "K" controllers. 6. How to locate trouble in a reversing switch and how to overcome it. 7. How to reverse a car in order to obtain best effects. 8. Points about motors that should be looked after closely. 9. Short circuits. What a short circuit means and how to locate it. 10. Information on incandescent light circuits. 11. Electric motor force, or how armature rotation is obtained. 12. How to increase the speed of a motor by changing two connections. 13. General information on Westinghouse motors. 14. Westinghouse fuse block. 15. Westinghouse lightning arresters. 16. Westinghouse lamp circuit. 17. Information on open circuits and sparking brushes. 18. Some questions you may be called upon to answer. 19. Points of interest to all. 20. Conclusion. 21. Diagram of car.

EXTRACT FROM INTRODUCTION.

"Recognizing the fact that not one motorman in twenty thoroughly understands his motors, I feel that I am giving them great value for their money, and at the same time furnishing them with the means of holding a position on any line they may be employed on. While serving as foreman in different car houses, the author has been able to gain a great many pointers that will come up on the examination of motormen and conductors, and having possessed these, together with my knowledge of electricity, I feel perfectly safe in stating that they cannot ask you any question that I have not honestly and correctly answered in this little book. If you wish to learn the value of this book, go to your electrician, or man in charge of your motors, and ask him for information, and then, and not until then, will you learn the true value of this book. It has always been understood by all electricians or foremen of car houses, that no information of any importance be given to any one outside of their class, and consequently most men running cars to-day are ignorant of their motors."

PRACTICAL
DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt, **$3.50.**
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D.
This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1 25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft.* 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft.* 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft.* 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Sent Prepaid on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world.

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.

ELECTRICIAN PUBLISHING COMPANY. Suite 510 Marquette Building, Chicago.

Send for a copy of our Latest Publication on TRANSFORMERS and learn why the GENERAL ELECTRIC TYPE H OIL TRANSFORMER is first in every competitive test where the following important elements of design are considered:

INSULATION.	The safety of your customers depends upon the integrity of the insulation. Type H Transformers are tested for 10,000 volts.
*TEMPERATURE RISE.	Excessive Temperature Rise will cause the core losses to permanently increase and the insulation to fail.
IRON CORE LOSS	In Type H Transformers is the lowest consistent with proper regulation and temperature.
REGULATION	In Type H is 2 per cent. or below in all but the smaller sizes.

*Many competitive Transformers show a temperature rise of 100 degrees centigrade.

ELECTRICITY FOR ENGINEERS.

Latest Edition, Now Published in One Complete Volume, 424 Pages, Profusely Illustrated.
Just the Work for Engineers, Electricians, Dynamo Tenders, etc.

PART I. CONTENTS.—CHAPTER I: Electricity; Positive and Negative; Conductors, Non-Conductors and Insulators; Electro-Motive Force; Volts; Resistance; Ohms; Current; Amperes.—CHAPTER II: Dynamos; Magnets; Field Coils; Electro Magnets; Permanent Magnets.—CHAPTER III: Armatures, Construction of, Different Kinds of; Commutators, How Made and Connected; Heating of Armatures; Eddy Currents.—CHAPTER IV: The Current; How Produced; Induction; Series Wound Dynamos; Shunt Wound Dynamos; Exciting the Fields; Constant Current and Constant Potential Dynamos; Series and Parallel; Parallel or Multiple Arc System.—CHAPTER V: Incandescent Lamps; Filaments; Connections; Flashing; Exhausting; Testing; Candle Power; Operated in Series; Automatic Cut-Out; In Multiple Arc or Parallel; Multiple Series; Multiple Series Cut-Out; Three Wire System.—CHAPTER VI: The Arc Light; How Formed; Causes of Unsteadiness; Remedy; Effect of Shades or Globes; Shape of Carbons Under Different Conditions of Burning; Arc Lamps; Regulating and Cut-Out Mechanism; Action of Current; Clutch Lamps; Clockwork Lamps; Double Lamps; Troubles in Lamps.—CHAPTER VII: Commutators and Brushes; The Brush Commutators; Brushes; Different Styles of Brushes; Double Brushes; Single Brushes; Troubles with Commutators and Brushes; Correct Position of Brushes; Sparking at Brushes; Care of Brushes and Commutators; Flashing.—CHAPTER VIII: Current Regulation; Hand Regulation; By Position of Brushes; Resistance Box; Resistance Coils.—CHAPTER IX: American System of Automatic Current Regulation; The Dynamo; Regulator; Action of Regulator. CHAPTER X: Brush System of Automatic Current Regulation; Brush Armature; Diagram of Circuits through Dynamo, Regulator and Lamps; Dial or Regulator; Care and Adjustment of Dial; Dial Controller; Circuits and Connections of No. 8 Brush Dynamo; Circuits of Compound Wound Constant Potential Brush Dynamo.—CHAPTER XI: The Edison System; Automatic Regulator; Circuits of Regulator: Circuits of Dynamo; Action of Regulator; Howell Pressure Indicator; Diagram of Circuits; Description of Parts and Operation.—CHAPTER XII: Excelsior System of Automatic Current Regulation; Dynamo; Armature; Diagram of Circuits; The Regulator and Motor; Action of Regulator.—CHAPTER XIII: Schuyler System of Automatic Current Regulation; Dynamo; Armature, Commutator and Brushes; Diagram of Circuits in Armature and Field; Regulator; Circuits in Regulator.—CHAPTER XIV: Thomson-Houston System of Automatic Current Regulation; Dynamo; Armature; Commutator and Brushes; Controlling Magnet; Wall Controller; Diagram of Circuits; Air Blast.—CHAPTER XV: Waterhouse System of Three-Brush Automatic Current Regulation; Dynamo; Extra Brush; Resistance Coils and Regulator. CHAPTER XVI: Ampere Meters; Tangential Scale; Solenoid Meters.—CHAPTER XVII: Voltmeters; Pressure and Potential Indicators.—CHAPTER XVIII: Testing; Galvanometers; Astatic Needle; Differential Apparatus.—CHAPTER XIX: Wheatstone Bridge or Electrical Balance; Diagram of Circuits and Methods of use; Bridge and Rheostat; Round Form; Square Form.—CHAPTER XX: The Magneto as a Testing Instrument; Armature; Field; Bell; Diagram of Circuits.—CHAPTER XXI: Coupling Dynamos Together; In Series; In Shunt; Series, Shunt and Compound Wound Machines.—CHAPTER XXII: Switches and Switchboards; Loop Switch; Plug and Socket; Change Over Plug and Socket; Conclusion. CHAPTER XXXIII: Electric Motors: General Principles the Same as in Dynamos; Types; Shunt and Series Motors Suitable for all General Purposes; Regulation of Shunt Motors; Of Series Motors; Counter E. M. F.; Direction of Rotation and Direction of Current; Starting Motors; Diagram of Connection.

PART II. CONTENTS.—CHAPTER I: Alternate Current Dynamos; Principles of the Field; Field Current Armature; Winding; Connections; Lamination; Different Types of Alternators; Regulation; Leading Systems; The Brush Generators; Magnets; Armature; Principles of Induction.—CHAPTER II: Dynamos, Continued; The Mordey Alternator; Stationary Armatures; Field Magnets; Ferranti Armature; Field Magnets; Winding; Collectors.—CHAPTER III: Dynamos Concluded; Siemens Dynamo; Best Magnetic Circuits; Stanley Constant Current Dynamo; The Armature; Self Induction; Regulation.—CHAPTER IV: Induction Coils; Converters; Transformers; Economy of Distribution; An Electrical H. P.; Losses in Conductor; Induction Coils; Effect of Induction; Transformers.—CHAPTER V: Transformers Continued; Induction Coils; Converters; Transforming Up and Down; Design of Transformers; The Static Charge; Protection Against; Grounding the Secondary; Other Devices; The Foil Protector; Different Types of Transformers.—CHAPTER VI: Transformers, Concluded; Fuses; Regulation; Winding of Transformers; Connecting to Circuit; Regulation; Safety Fuses.—CHAPTER VII: Parallel System; Series Arc Light System; Diagram of Circuits; Parallel System; Primary Circuit; Secondary Circuit; Placing of Transformers; Fuses; Diagram of Series Arc Light Circuit.—CHAPTER VIII: Lines of Force; Hysteresis; Magnetic Penetration; The Circuit of Lines of Force; Experiments with Magnet; Rapidity of Reversals and Hysteresis.—CHAPTER IX: Arc Lamps; In Series; The Westinghouse Arc Lamp; Diagram of Circuits in Lamp; Action of the Mechanism; Flat Carbons.—CHAPTER X; Arc Lamps, in Multiple; Slattery Differential Lamp; Mechanism of Lamp; Its Operation.—CHAPTER XI: Measuring and Indicating Apparatus; Instruments for Use with Alternating Currents Differ from those used with Continuous Currents; Ammeters; Voltmeters; Description of Several Forms of Instruments.—CHAPTER XII: Measuring Instruments, Continued; Hot Wire Instruments; The Cardew Voltmeter; Details of the Instrument; Low Potential Voltmeter.—CHAPTER XIII: Voltmeters; Double Coil Voltmeter; Two Types.—CHAPTER XIV: Spring Meters; Curled Spring Meter.—CHAPTER XV: Twisted Strip Instruments; Diagram of Connections and Operation of Instrument.—CHAPTER XVI: Recording Meters; Stanley Meter; Construction and Principles of Operation; Diagrams of Parts; Slattery Induction Meter; Description of Parts and Principles of Operation; Watt Meter; Thomson Meter.—CHAPTER XVII: Generators in Parallel; Difficulties in Operating; Alternate Current Generators in Parallel; Arrangements of Circuits and Machines for Operating in Parallel; Diagram of Common Arrangement of Machines and Circuits.—CHAPTER XVIII: Ohm's Law; Strength of Current; Formulas and Examples; Power and Heating Effects of Currents.—CHAPTER XIX: Ground Alarms and Leak Detectors.

Chloride Accumulators

IN RESIDENTIAL PLANTS.

Rhinecliff, Dutchess Co., N. Y., Aug. 2nd, 1898.
THE ELECTRIC STORAGE BATTERY CO., New York.

Gentlemen: The battery which you installed for us in October, 1896, has been in constant operation ever since, giving splendid satisfaction. It is of 720 Amp. hour capacity and we have frequently taken over 800 Amp. h'rs from it for electric lighting. It is very remarkable but true that after the hard service sometimes required of it there is no visible deterioration. The battery has given absolutely no trouble whatever, the only care required being to charge and discharge, and occasionally replace evaporation. Yours very truly,

C. H. VAN WERT, JR., Chief Engineer.

New York, July 18, '95.
THE ELECTRIC STORAGE BATTERY CO., New York.

Gentlemen: In answer to your inquiry as to how we are satisfied with the storage battery of 58 cells installed by your Company at the White Plains residence of Mr. Whitelaw Reid, will say that battery has been in constant use every day for 3 yrs. and 10 mos., and it has done all you said it would. Battery has not cost us one cent for any purpose since it was put in and has required but very little attention.

Very respectfully,

JAS. A. STILLMAN,
Ch. Engr. Tribune Bldg.

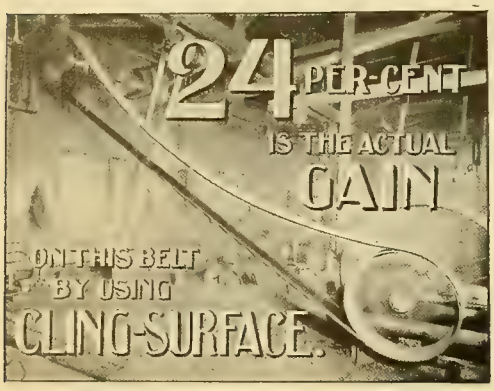
A MODERN DISTRIBUTION.

SEND FOR ONE---THE WAGON MAY NOT PASS YOUR WAY!



This little belt (12 in.) was our first slack belt—it earned $640.00 in two years in increased power at a cost of only $63.00 for CLING-SURFACE for the whole plant. Drop us a line and we will tell you the whole story.

CLING-SURFACE

IS DIFFERENT FROM, AND SO MUCH MORE THAN A BELT DRESSING THAT OUR PATRONS SAY:

"It makes a belt pull like a chain."

"Our belts are as soft as calfskin."

"Drives better than rosin, and lasts ten times as long."

"Has saved three belts on one machine in two years."

WE GUARANTEE THAT EVERY POUND WILL JUSTIFY THE ABOVE.
ORDER A SAMPLE CAN NOW.

CLING-SURFACE MFG. CO., 177-182 VIRGINIA ST., BUFFALO, N. Y.

THE TELEPHONE HAND-BOOK

BY HERBERT LAWS WEBB.

Member of the American Institute of Electrical Engineers, and of the Institution of Electrical Engineers, London. Author of "A Practical Guide to the Testing of Insulated Wires and Cables." Joint Author of "Electricity in Daily Life."

146 Pages, 138 Illustrations, Cloth, Hand-Book Size, Price $1.00.

EXTRACT FROM PREFACE.

"This little book has no pretension to be considered a complete treatise on telephony as it exists in America. The time for such a work is not yet come. But it is felt that there is a demand for a practical book on telephone working and management, and the TELEPHONE HAND-BOOK is an attempt at meeting that demand. With the exception of a few chapters dealing with certain forms of transmitters and receivers used in Europe, which are given for the information of those who may wish to engage in the manufacture of telephones, the book is based entirely on standard American practice; and most of the material, apparatus and methods described are peculiar to or have originated in this country."

No pains have been spared to make it the best book of its kind. It is right up to date, intensely practical, and so plain and clear in its language that anyone can understand and learn from it everything regarding telephone work and management. It conforms in size and style to our other Hand-Books which have been so favorably received by the entire electrical fraternity.

CONTENTS.

CHAPTER 1. The Invention of the Telephone.
2. Sound Waves. Articulate Speech.
3. Electric Telephony. The Bell Telephone.
4. The Microphone.
5. Current Induction. Electromagnetic Induction.
6. The Induction Coil: Its Use in the Telephone Transmitter.
7. The Complete Telephone Circuit.
8. Magnet Telephones.
9. The Bell Telephone Receiver.
10. Other forms of Magnet Telephones.
11. The Gower, Ader and D'Arsonval Receivers. Mercadier's Bi-Telephone.
12. The Siemens, Kotyra, Neumayer and Böttcher Receivers
13. Carbon Transmitters.
14. The Blake Transmitter.
15. The Long Distance Transmitter.
16. The Solid-back Transmitter.
17. The Berliner Transmitter.
18. The Cuttriss Transmitter.
19. Various European Transmitters.
20. The Efficiency of Carbon Transmitters.
21. Batteries for Telephone Work.
22. Open Circuit Batteries.
23. Closed Circuit Batteries.
24. The Practical Management of Batteries.
25. Magneto Bell.
26. Automatic Switches.
27. Telephone Line Construction.
28. Metallic Circuit.
29. Underground Wires.
30. Lightning Arresters.
31. Inside Wiring.
32. Installation of Telephone Instruments.
33. Inspection and Maintenance.
34. The Condenser; Its Use in Telephony.
35. Electromagnetic Retardation.
36. Exchange Working.
37. Small Exchanges.
38. Party Lines; The Bridging Bell.
39. Long Distance Telephony.
40. Duplex Telephony.
41. Simultaneous Telegraphy and Telephony
Appendix.

Published and for sale by ELECTRICIAN PUBLISHING CO., 510 Marquette Building, Chicago.

THE ORATOR.

The ORATOR AND Improved Hunnings

solid back dust transmitters in Wall, Desk and Cabinet Styles. They are **Convenient, Durable** and the **best** of **talkers.**

A trial will convince anyone of their superiority on either short or long distance work.

Anyone can make an instrument that will work well at first, but to produce one that will **continue** to meet every proper demand is quite another problem.

The **ORATOR** will.

MANUFACTURED BY

The RAWSON ELECTRIC CO.,
ELYRIA, O., U. S. A.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois, Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

LUIS JACKSON,
Industrial Commissioner, C., M. & St. P. R'y,
450 Old Colony Building, CHICAGO, ILL.

WILLIAMS MAGNETOS CHALLENGE THE WORLD!

Our competitors have attempted to dispute our claim to being the manufacturers of the most **efficient Magneto Bells, Switch-board Generators** and **Receivers** on earth, but thus far they have done little more than **howl infringement** and reiterate their claim of having **"the finest and best."**

Our Claims are being substantiated by the rapidity with which our **modern** apparatus is **displacing all other makes.** We are very glad to send samples to **responsible** parties.

You should try our **New Double-Pole Receiver.**

THE WILLIAMS ELECTRIC CO., 84-86 Seneca Street, CLEVELAND, O.

STANDARD TELEPHONE & ELECTRIC CO.,

MADISON, WIS.

Standard Electrical Dictionary.

By PROF. T. O'CONOR SLOANE.

Author of "Arithmetic of Electricity," "Electricity Simplified," "Electric Toy Making," Etc.

682 Pages, 393 Illustrations. Handsomely bound in cloth, 8vo, $3.

An Entirely New Edition, Brought Up to Date and Greatly Enlarged.

COMPLETE—CONCISE—CONVENIENT.

In publishing the "Standard Electrical Dictionary," the author has adhered to what the work purports to be, exhausting the subject of electrical terms, giving each title the clearness of explanation necessary to make the understanding of it complete without unnecessary elaboration. In this work, every electrical word, term, or phrase will be found intelligently defined.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in any way interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact, it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

THE BEST ANSWER TO A QUESTION

On Wiring, can be found in the New Book,

"WIRING TABLES,"

"How They are Made and How to Use Them."

BY THOS. C. CRIER.

Whenever you are asked a question on Wiring, refer the questioner to this book, and he will find what he desires.

THE BOOK CONTAINS: The Law of Resistance, Electromotive Force and Current Fully Explained. How to Calculate the Size of Wires. The Different Methods of Wiring, with Diagrams. How to Apply the Simple Formula, in Calculating the Size of Wires Under all Conditions. Diagrams for Wiring 3 Point, 4 Point, Head Light and Heat Regulating Switches.
27 TABLES ON WIRING AND VALUABLE DATA.

Ohm's law is described in such plain and simple language that one cannot fail to clearly understand it.

Bound in Cloth, 80 Pages, Size 5x7½ in. Sent, prepaid, on receipt of price, $1.00.

ELECTRICIAN PUBLISHING CO., 510 Marquette Building, CHICAGO.

WATER WHEELS

For all Heads from 3 Ft. to 2000 Ft.

Especially adapted to all kinds of

ELECTRIC POWER AND LIGHTING PLANTS.

Recent tests at Holyoke enable us to guarantee:

The Largest Power ever obtained from a wheel of the same diameter. The highest speed ever obtained for the same power. The highest mean efficiency ever realized when running from half to full gate. We guarantee also: *A runner of the greatest possible strength. A gate unequaled in quickness and ease of opening and closing. Tests show over 81 per cent. average efficiency with half to full water.*

PRACTICAL

DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring. . . . . .

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

ELECTRICIAN PUBLISHING CO.,
SUITE 510 MARQUETTE BUILDING, CHICAGO.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**
The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt. **$3.50.**
The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D.
This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth. **$1 25.**
A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft.* 1 volume, 12mo, cloth, **50** cents. Fully illustrated.
This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft.* 1 volume, 12mo, illustrated, cloth, **50** cents.
The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.
The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft.* 1 volume, 12mo, cloth and gold, **75** cents.
The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Sent Prepaid on Receipt of Price.

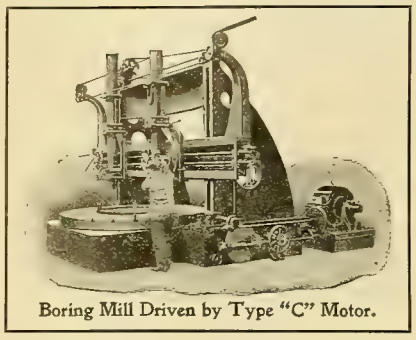
Westinghouse Systems

OF ELECTRIC TRANSMISSION



Boring Mill Driven by Type "C" Motor.

Time and Experience have proved the efficacy of the

Westinghouse Systems

of Direct and Alternating Current Transmission of Power. They are applicable to every known service, and under the most severe conditions have exceeded all expectations.

The Type "C" Motor, for Alternating Current, having no commutator or electrical connection with the revolving element, is adapted to operate in places where the use of a direct-current motor would be prohibitive. Its extreme simplicity is a most valuable feature, especially where inexperienced persons are to be depended upon for its care. It needs only to be occasionally oiled at the bearings to make long runs without further attention.

The Roney Mechanical Stoker

In its present perfected form the result of over ten years' experience, covering the equipment of nearly two thousand furnaces.

Burns any kind of fuel with the highest efficiency. Smokeless combustion; labor saving. Design is such that coal-handling machinery can be conveniently used in connection, rivaling natural gas in cleanliness and convenience.

There are some conditions under which a mechanical stoker is not desirable. We know these conditions, and will not sell except where beneficial results are certain.

Send for a copy of our Latest Publication on TRANSFORMERS and learn why the GENERAL ELECTRIC TYPE H OIL TRANSFORMER is first in every competitive test where the following important elements of design are considered:

INSULATION.	The safety of your customers depends upon the integrity of the insulation. Type H Transformers are tested for 10,000 volts.
*TEMPERATURE RISE.	Excessive Temperature Rise will cause the iron core losses to permanently increase and the insulation to fail.
IRON CORE LOSS	In Type H Transformers is the lowest consistent with proper regulation and temperature.
REGULATION	In Type H is 2 per cent. or below in all but the smaller sizes.

*Many competitive Transformers show a temperature rise of 100 degrees centigrade.

BELTS IN A PLANT ARE LIKE VEINS IN A HUMAN BODY,

Transmitting Power, Motion, LIFE.

Both must be kept in order. A belt with CLING-SURFACE requires hardly any attention, assures absolutely NO slipping, INCREASED power with belts SLACK and soft. Your old oily belts can be given the life of new ones. We will tell you how FREE of cost.

THE "CLARK" WIRE.

FOR SWITCHBOARD, RAILWAY and MOTOR USE.

All sizes of Stranded and Flexible Wire and Cables with Clark's Insulation

Inspector Boston Fire Underwriters' Union says:
"A thoroughly reliable and desirable wire in every respect."

The Clark wire has been before the public and in use for the past ten years, and has met with universal favor. We guarantee our insulation wherever used, Aerial, Underground or Submarine, and our net prices are as low, if not lower, than any other first-class insulated wire. We shall be pleased to mail Catalogues, with terms and discounts for quantities.

A VALUABLE NEW WORK.

ELECTRICIANS' HANDY-BOOK

OF USEFUL INFORMATION.
Edited by A. E. WATSON, A. M., Teacher of Electricity, Brown University, Providence, R. I.
Compiled by E. T. BUBIER, 2d.
ILLUSTRATED.

A Compilation from the works of Sylvanus P. Thompson, Kapp, Allsop, Munroe and Jamieson, Watson, Bottone, Bonney, Watt, Poole, Trevert, Haskins, Morrow and Reid, and others.

This book gives a large number of receipts for making Battery Fluids, Battery Pastes, Insulating Materials and Varnishes, Electro-Plating Solutions, etc. Tells how to make Electric Batteries, Bells, Telephone, Motors, Dynamos, Induction Coils, Influence and Static Machines, etc. Gives formulæ for winding Dynamos, Motors, Armatures, Field Magnets, Transformers. Contains many Rules, Tables, Data, etc. In fact it is almost a complete cyclopædia of Electricity. It is neatly bound and of a convenient size to be carried in the pocket for handy reference.

CONTENTS.

PART
1. History.
2. Theory.
3. Measurements. (Electric and Magnetic.)
4. Electric Batteries.
5. Electro-Chemistry and Metallurgy.
6. The Telegraph and Telephone.
7. Dynamos and Motors.
8. Management of Dynamos and Motors.
9. Electric Lighting.
10. Transformers.
11. Wiring for Electric Power.
12. Wiring for Bell Fitting and Gas Lighting
13. Electric Railways.
14. Miscellaneous.
15. Useful Tables.
16. Logarithms.

Contains over four hundred and fifty pages and many illustrations.

DOMESTIC Electrical Work.

Concise and Practical Explanations for Plumbers, Tinners and Hardware Dealers on How to Wire Buildings for Bells, Alarms, Annunciators and for Gas Lighting from Batteries.

Illustrated with Twenty-two Diagrams.

By WILLIAM A. WITTBECKER.

Price in Paper, 25 Cents.
Price in Cloth, 50 Cents.

THE growing demand for simple electrical apparatus in dwelling houses, offices and work shops and the need of plain instructious whereby any person without a previous knowledge of electricity may be enabled to undertake their successful installation, has prompted the publication of this little book. It is not intended for the amateur who seeks for nothing but experimental work, neither is it expected to enlighten the expert electrician; but to the person who is seeking for information that will assist him in increasing his daily earnings this little volume is addressed.

The information given is above all else practical, and with a close observance of the directions laid down anyone without the slightest knowledge of electricity should be able to do the work described.

BARGAINS IN DYNAMOS, ENGINES.

Write for Price List No. 22.

Direct Current Dynamos, Alternating Current Dynamos, Arc Dynamos, Engines, Boilers, Heaters, Pumps, all sizes. This apparatus has been in use in our own stations, and we therefore know its exact history, and can state that it is in thoroughly good operative condition.

CHICAGO EDISON COMPANY, 139 ADAMS ST., CHICAGO.

TALK ABOUT PRICES.

Having purchased the entire available assets of The Cornman Company, assigned, and of The Cleveland Electric Trading Company, we have now on hand a large amount of alternating and direct current and arc apparatus, as well as a large stock of lamps, station supplies, construction supplies, etc., which we desire to close out at once.

We have bought cheap, and we are willing to sell cheap.

We expect to have on hand, from time to time, considerable apparatus of this sort. It is our purpose, however, to act as contracting engineers and manufacturers' agents, and we are fitted to handle anything in the way of electrical and steam installation. **Write us regarding your contemplated improvements.**

Important Telephone Books.

THE TELEPHONE HANDBOOK. By Herbert Laws Webb. 16mo, 150 pp. Price $1.00.
This handbook is a complete treatise on telephony, and a practical book on telephone working and management, based entirely on standard American practice. It is extremely useful to telephone inspectors and operators.

PATENTED TELEPHONY. A Review of the Patents Pertaining to Telephones and Telephonic Apparatus. Published by the American Electrical Engineering Association. Cloth bound; fully illustrated. Price $1.50.

THE ELECTRIC TELEPHONE. By E. J. Houston, Ph. D., and A. E. Kennelly, Sc. D.; 12mo, cloth, 422 pp., 142 illustrations. Price $1.00.
This book describes the construction of the various forms of transmitting and receiving devices, the signaling mechanisms, and the switchboard apparatus at the central station. It is written by two well-known electricians, and has the merit of being the latest work on the subject.

THE PRACTICAL TELEPHONE HANDBOOK. By Joseph Poole, A. I. E. E. Second edition, revised and enlarged. 360 pp. 288 illustrations. Price $1.50.
In this work the writer has endeavored to produce a manual of moderate size and cost, but thoroughly practical, and detailing, as far as space will allow, the most recent methods of telephone working. While the requirements of telephone employes have been kept constantly in view, it is fully intended also that the book shall be of service as a source of information on telephonic matters to users of the telephone and to the public generally.

TELEPHONE TROUBLES AND HOW TO FIND THEM. A complete handbook for telephone inspectors. By W. Hyde and J. H. McManman, edited by Prof. C. H. Haskins. Sixth edition. 16mo, 50 pp. Price 25 cents.
This little volume is an extremely practical work for telephone employes, written in a popular style and devoid of technicalities.

TELEPHONE LINES AND THEIR PROPERTIES. By Wm. J. Hopkins. Second edition. 272 pp. Illustrated. Price $1.50.

A MANUAL OF TELEPHONY. A new and large edition. By W. H. Preece, F. R. S., and A. J. Stubbs. 508 pages. 333 illustrations. Price $4.50.

HOW TO MAKE AND USE THE TELEPHONE. By Geo. H. Cary. The purpose for which this book is written is to furnish information to those who may desire to construct or use telephone apparatus or lines on a small scale. Price $1.00.

TELEPHONES, THEIR CONSTRUCTION AND FITTING. A Practical Manual on the Fitting Up and Maintenance of Telephone and Auxiliary Apparatus. By F. C. Allsop. 191 pp., 168 illustrations. Price $2.00.

TELEPHONE SYSTEMS ON THE CONTINENT OF EUROPE. By Bennett. 436 pages. 169 illustrations. Price $4.50.

TELEPHONING OF GREAT CITIES. By Bennett. Paper. Price 35 cents.

MAGNETO HAND TELEPHONE. Its Construction, Fitting Up and Adaptability to Everyday Use. By Hughes. 80 pages. 23 illustrations. Price $1.00.

BELL'S ELECTRIC SPEAKING TELEPHONE. Its Invention, Construction, Application, Modification and History. By Prescott. New edition, revised and enlarged. 795 pages. 516 illustrations. Price $4.00.

PHILIPP REIS, INVENTOR OF THE TELEPHONE. A Biographical Sketch with Documentary Testimony. By Thompson. Translation of the original papers of the inventor and contemporary publications. 182 pages. 2 plates and 48 engravings. Price $3.00.

ELECTRICAL TRANSMISSION OF INTELLIGENCE AND OTHER ADVANCED PRIMERS OF ELECTRICITY, treating on the telegraph, telephone, etc. By E. J. Houston. 330 pages. 88 illustrations. Price $1.00.

The Above, or Any Other Electrical Works Published, Sent on Receipt of Price.

Crane is a Great Rhymester.

Charles S. Crane, the general passenger agent of the Wabash, is quite a poet, and has written many nice things. Recently he read the poem on the "Music of the Wheels," written by E. E. Coyle for the Baltimore "Morning Herald," which runs as follows:

MUSIC OF THE WHEELS.

When you're riding on the railroad
At a mile-a-minute crack,
Do you ever note the rhythm
Of the wheels along the track?
Is there any great composer
Of sharps and flats and bars
Can equal in his cadences
The music of the cars?

Whether dashing through the meadow,
Or the tunnel's choking grime,
You will never hear them falter
From the measured beat of time;
Charging wildly 'mongst the mountains,
Or by the river's bank,
You will always find them playing—
Click-clickety-click-clank.

Every air that has been written
Since the days of wicked Cain
Finds a fit and perfect setting
In the rhythm of the train;
From opera to comic song,
From Patti down to Cline,
You can hum all sorts of ditties
While rushing down the line.

After reading the above, Mr. Crane got his typewriter in order, and by screwing up the poetical lever ground off the following:

It's too bad to spoil the story
Told in cadence sentimental,
But it's not so on the Wabash
With its famous "Continental."

If you are about to travel,
Please note the following points:
The Wabash track is perfect,
And you cannot count the joints.

In its wheels there is no music,
At a mile-a-minute gait;
And of course there is no rhythm
On a track that's up-to-date.

There is no measured beat of time;
In fact it can't be measured,
We beat our rivals every time,
A fact that should be treasured.

Locations for Industries.

The name of the Chicago, Milwaukee & St. Paul Railway has long been identified with practical measures for the general upbuilding of its territory and the promotion of its commerce, hence manufacturers have an assurance that they will find themselves at home on the Company's lines.

The company has all its territory districted in relation to resources, adaptability and advantages for manufacturing, and seeks to secure manufacturing plants and industries where the command of raw material, markets and surroundings will ensure their permanent success.

Mines of coal, iron, copper, lead and zinc, forests of soft and hard wood, quarries, clays of all kinds, tanbark, flax and other raw materials exist in its territory in addition to the vast agricultural resources.

The Chicago, Milwaukee & St. Paul Railway Company owns 6,150 miles of railway, exclusive of second track, connecting track or sidings. The eight States traversed by the Company, Illinois, Wisconsin, Northern Michigan, Iowa, Missouri, Minnesota, South Dakota and North Dakota, possess, in addition to the advantages of raw material and proximity to markets, that which is the prime factor in the industrial success of the territory—a people who form one live and thriving community of business men, in whose midst it is safe and profitable to settle.

A number of new factories and industries have been induced to locate—largely through the instrumentality of this company—at points along its lines. The central position of the States traversed by the Chicago, Milwaukee & St. Paul Railway makes it possible to command all the markets of the United States. The trend of manufacturing is westward. Confidential inquiries are treated as such. The information furnished a particular industry is reliable. Address.

Standard Electrical Dictionary.

BY PROF. T. O'CONOR SLOANE.

Author of "Arithmetic of Electricity," "Electricity Simplified," "Electric Toy Making," Etc.

682 Pages, 393 Illustrations. Handsomely bound in cloth, 8vo, $3.

An Entirely New Edition, Brought Up to Date and Greatly Enlarged.

COMPLETE—CONCISE—CONVENIENT.

In publishing the "Standard Electrical Dictionary," the author has adhered to what the work purports to be, exhausting the subject of electrical terms, giving each title the clearness of explanation necessary to make the understanding of it complete without unnecessary elaboration. In this work, every electrical word, term, or phrase will be found intelligently defined.

A practical handbook of reference, containing definitions of about 5,000 distinct words, terms and phrases.

The work is absolutely indispensable to all in any way interested in electrical science, from the higher electrical expert to the everyday electrical workman. In fact, it should be in the possession of all who desire to keep abreast with the progress of this branch of science.

THE PELTON WATER WHEEL CO.

Gives exclusive attention to the development and utilization of water powers by the most modern, economic and improved methods.

An experience of more than fifteen years, involving both the theory and practice of hydraulic engineering as relates to power development in its widest range of application, is at the service of its customers.

NINE THOUSAND WHEELS NOW RUNNING
Aggregating some 700,000 h. p.

ELECTRIC POWER TRANSMISSION

Pelton Wheels afford the most reliable and efficient power for such service, and are running the majority of stations of this character in the United States, as well as most foreign countries.

Highest efficiency and absolute regulation guaranteed under the most extreme variations of load. Catalogues furnished on application.

Address, **PELTON WATER WHEEL COMPANY,**
143 Liberty St., New York City, U. S. A. or 121 Main St., San Francisco, Cal., U. S. A.

GRAPHITE FOR RESISTANCE...

Made in almost any form required and of 1 ohm or 1,000,000 ohms as desired. We also make graphite boxes and crucibles resisting heats of 4,000 degrees. . . . . .

JOS. DIXON CRUCIBLE CO., - - Jersey City, N. J.

ROOFING

(ROLL CAP STEEL)

Is more effective for *Flat Roofs.* Made in rolls 50 ft. long or more, from sheets 26 in. wide by 8 ft. long. No possible chance for leakage, as the cross seams are formed perfectly.

THE BEST ANSWER TO A QUESTION

On Wiring, can be found in the New Book,

"WIRING TABLES,"

"How They are Made and How to Use Them."

BY THOS. C. GRIER.

Whenever you are asked a question on Wiring, refer the questioner to this book, and he will find what he desires.

THE BOOK CONTAINS: The Law of Resistance, Electromotive Force and Current Fully Explained. How to Calculate the Size of Wires. The Different Methods of Wiring, with Diagrams. How to Apply the Simple Formula, in Calculating the Size of Wires Under all Conditions. Diagrams for Wiring 3 Point, 4 Point, Head Light and Heat Regulating Switches.
27 TABLES ON WIRING AND VALUABLE DATA.

Ohm's law is described in such plain and simple language that one cannot fail to clearly understand it.

Bound in Cloth, 80 Pages, Size 5x7½ in. Sent, prepaid, on receipt of price, $1.00.

ELECTRICIAN PUBLISHING CO., 510 Marquette Building, CHICAGO.

WATER WHEELS

For all Heads from 3 Ft. to 2000 Ft.

Especially adapted to all kinds of

ELECTRIC POWER AND LIGHTING PLANTS.

Recent tests at Holyoke enable us to guarantee:

The Largest Power ever obtained from a wheel of the same diameter. The highest speed ever obtained for the same power. The highest mean efficiency ever realized when running from half to full gate. We guarantee also: *A runner of the greatest possible strength. A gate unequaled in quickness and ease of opening and closing. Tests show over 81 per cent. average efficiency with half to full water.*

State your Head and send for 124 page pamphlet.

THE

MOTORMAN'S GUIDE,

A PRACTICAL TREATISE

—ON—

Street Railway Motors;

—OR—

How to Become a Practical Motorman.

By J. W. GAYETTY.

Price, - - - - - - $1.00

CONTENTS.

1. Introduction. 2. Car wiring. 3. How to locate trouble in your car while on the road. 4. How to cut out a motor. 5. Information on "K" controllers. 6. How to locate trouble in a reversing switch and how to overcome it. 7. How to reverse a car in order to obtain best effects. 8. Points about motors that should be looked after closely. 9. Short circuits. What a short circuit means and how to locate it. 10. Information on incandescent light circuits. 11. Electric motor force, or how armature rotation is obtained. 12. How to increase the speed of a motor by changing two connections. 13. General information on Westinghouse motors. 14. Westinghouse fuse block. 15. Westinghouse lightning arresters. 16. Westinghouse lamp circuit. 17. Information on open circuits and sparking brushes. 18. Some questions you may be called upon to answer. 19. Points of interest to all. 20. Conclusion. 21. Diagram of car.

EXTRACT FROM INTRODUCTION.

"Recognizing the fact that not one motorman in twenty thoroughly understands his motors, I feel that I am giving them great value for their money, and at the same time furnishing them with the means of holding a position on any line they may be employed on. While serving as foreman in different car houses, the author has been able to gain a great many pointers that will come up on the examination of motormen and conductors, and having possessed these, together with my knowledge of electricity, I feel perfectly safe in stating that they cannot ask you any question that I have not honestly and correctly answered in this little book. If you wish to learn the value of this book, go to your electrician, or man in charge of your motors, and ask him for information, and then, and not until then, will you learn the true value of this book. It has always been understood by all electricians or foremen of car houses, that no information of any importance be given to any one outside of their class, and consequently most men running cars to-day are ignorant of their motors."

The steady and increasing favor in which any article is received is the best evidence of its merit. This has been the history of our engine during the fifteen years of its existence, and our engines have been our best advertisements. The highest quality of materials and workmanship are used in their construction. They cost less for maintenance, are economical and reliable; embody all modern improvements, and for these reasons deserve and command higher prices than others.

PRACTICAL
DYNAMO BUILDING,

With detail drawings and instructions for winding. Giving correct sizes of wire, dimensions of iron, etc. Also diagram for house wiring.

BY L. C. ATWOOD.

Profusely illustrated. Size of page, 10x8 inches. Price, $3.

"This work is gotten up especially for amateur builders and non-professional men. All measurements and instructions for winding are taken from machines in actual service. Particular attention has been given to every detail of construction, that they may be thoroughly understood. This work will be of great value, not only to those who wish to build dynamos, but to superintendents, engineers and workmen who have the care of established systems."—*From Preface.*

Pronounced to be a **PRACTICAL AND COMPLETE WORK.**

Sent postpaid on receipt of price.

NEW BOOKS.

AUTHORITIES ON SUBJECTS MENTIONED.

The Pocket Electrical Dictionary. Containing all of the words and definitions in the science. A new work. Indispensable to the electrician, student and professor. Over 11,000 words and about 15,000 definitions. By *Edwin J. Houston*, A. M., Ph. D. (Princeton). 1 volume, 32mo, cloth, **$2.50**; leather, **$3.00.**

Electricity Made Easy. Profusely illustrated. A hand-book for busy people. By *Edwin J. Houston*, A. M., Ph. D., and *Arthur E. Kennelly*, Sc. D. 1 volume, 12mo, cloth, **$1.50.**

Dynamo-Electric Machinery. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. Sixth edition, revised and enlarged. Profusely illustrated with new engravings. 19 folding plates. 2 volumes, 8vo, cloth, gilt, **$6.00.**

The rapid advance of electrical science made it absolutely necessary to revise the last edition, and this is now a new work. It is indispensable to the electrical expert, professor and student of electrotechnics. Students and professors highly appreciate the publication of this extensive work in two volumes.

Polyphase Electric Currents and Alternate Current Motors. By *Silvanus P. Thompson*, D. Sc., B. A., F. R. S. 1 volume, 8vo, cloth, gilt. **$3.50.**

The most important work on the subject. A companion book to "Dynamo-Electric Machinery." One of the text-books in schools of technology and colleges. Beautifully illustrated with fine engravings. Folding plates. Invaluable to the expert electrician.

Algebra Made Easy. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. This little work is of special value to readers of Prof. Thompson's Dynamo-Electric Machinery and Polyphase Electric Currents, as the work has been written to explain in a clear and simple manner the equations contained in those works. 1 volume, 16mo, cloth, **75** cents.

The Interpretation of Mathematical Formulae. By *Edwin J. Houston*, Ph. D., and *A. E. Kennelly*, Sc. D. 1 volume, 12mo., cloth, **$1.25.**

A most valuable aid to students and electrical workers.

A B C of Electricity. Now approaching its 65th thousand. By *William H. Meadowcroft*. 1 volume, 12mo, cloth, **50** cents. Fully illustrated.

This excellent primary book has taken the first place in elementary scientific works. It has received the endorsement of Thomas A. Edison. It is for every person desiring a knowledge of electricity, and is written in simple style so that a child can understand the work. It is what its title indicates, the first flight of steps in electricity.

Scholars' A B C of Electricity. By *William H. Meadowcroft*. 1 volume, 12mo, illustrated, cloth, **50** cents.

The author of this work has designed it for the use of teachers and scholars. A large number of simple experiments have been added, with notes relative to the work. It is the primary book for school use.

The X Ray; or Photography of the Invisible and Its Value in Surgery. By *William J. Morton*, M. D. Written in collaboration with *Edwin W. Hammer*, 1 volume, 12mo, cloth and silver, **75** cents; paper, **50** cents.

The work explains in clear and simple style how these extraordinary pictures are taken through solids. Full description is given of the apparatus used, and the text is profusely illustrated with half-tone illustrations giving facsimile copies of the pictures taken from the negatives of the author. The subjects are varied.

The A B C of the X Ray. By *William H. Meadowcroft*. 1 volume, 12mo, cloth and gold, **75** cents.

The first primary work on the subject. A book for the people. The author of "A B C of Electricity" showed clearly in that work his ability to explain a technical subject for the laymen who know nothing of scientific terms. He has written this work about the X Ray in his usual clear and simple style, and a wide circulation of this useful book is assured. The text of the author is beautifully embellished with fine engravings, and nothing is omitted that will give the public a clear knowledge of this remarkable discovery of Prof. Röntgen. The public would do well to secure both these important works.

Sent Prepaid on Receipt of Price.

ELECTRICIAN PUBLISHING CO., 510 Marquette Bldg., CHICAGO.

A VALUABLE BOOK FOR ENGINEERS AND FIREMEN NOW READY.

MODERN EXAMINATIONS OF STEAM ENGINEERS or PRACTICAL THEORY EXPLAINED and ILLUSTRATED.

BY W. H. WAKEMAN.

12 mo. Cloth. 272 pages. 53 Chapters.

Containing a complete list of 300 questions such as will be asked of any Engineer when taking examination for U. S. Government or State License, all of which are fully answered in the text.

PRICE, $2.00

By mail, postpaid, to any part of the world

This book while especially adapted for engineers' examinations, is also intended as a practical guide to Engineers, Firemen, Boiler Makers, Machinists, and others, in daily practice.

The author being a practical steam engineer himself, well knows the wants of the working engineer, and has put into this work such knowledge and information as is best adapted to their use, making it altogether the most complete and comprehensive guide for the busy workers in the engine room, boiler works and machine shops that has ever been published.

As one engineer who has read the book says: "I think there are few engineers that it wouldn't do some good. It seems as if it was a review of all I have ever read, and a lot more besides."

The author has treated of a very great variety of subjects which are of vital importance to all who wish to improve and extend their knowledge of steam engineering, and has explained the rules and formulas given, in the simplest manner possible, and has worked out examples by them, so that all who can read may understand them.

The 300 questions are an important feature of the book, they are entirely separate from the 53 chapters of reading matter, and were written after many years of practical experience and careful research by the author.

His connection with the Boardman Manual Training High School at New Haven, Conn., as Instructor in Steam Engineering, his 12 years of active membership in the N. A. S. E., and his position as Instructor of No. 10 of Conn., a sturdy branch of the National Organization, makes him especially competent in this part of the work.

The many flattering commendations which this book has already received from competent judges and high authorities, speak well for its value.
